GENERAL REPORT
ON THE
ADMINISTRATION
OF THE
PUNJAB AND ITS DEPENDENCIES
FOR THE YEAR 1867-68.

1. In the present report, the order of subjects prescribed by the Calcutta Statistical Committee will be followed, and the forms have been adopted and filled in as far as possible.

PART I.

**STATISTICS OF PHYSICAL, POLITICAL, AND FISCAL
GEOGRAPHY.**

A.—Physical Geography.

2. **AREA.**—From Appendix I. A—1 it will be perceived that the British possessions of the Punjab cover an area of 95,768 square miles, of which 32,432 are returned as cultivated, 23,780 as culturable, and 39,556 as unculturable. Of the cultivated area, 8,121,173 acres consisted at the beginning of the year of unappropriated culturable waste; of these, 49,711 were sold or granted during the year, leaving 8,071,462 acres unappropriated at the close of the year. But of this large area returned as *culturable* waste, the property of Government, the greater portion is situated in tracts where the rain-fall is so scanty that cultivation without irrigation is impossible, while the water is so far from the surface that wells are too costly to admit of their construction with any prospect of future remuneration. Another large portion consists of *rulks* or *scrub*, the retention of which is necessary for fuel purposes. Probably not much more than a tenth of the total culturable waste is really available for cultivation.

The area of the Native States in political relation with the Punjab Government is given approximately at 197,349 square miles; but there are no reliable statistics showing the proportion of the area brought under cultivation or culturable.

3. CHARACTER OF SURFACE.—This return cannot be accurately filled in at present, but measures have been taken for collecting the information required, which it is hoped will be ready for next year's report.

4. CLIMATE.—Most of the information required under this heading will be found in Appendix I. A—3. The statistics of rain-fall are obtained from returns furnished by district officers, who are supplied with rain gauges for the head quarters stations and each sub-collectorate in their respective districts. The thermometrical returns are furnished by Doctor Neil, the Meteorological Reporter of the province, from observations carefully taken under his direction with instruments of the best construction.

The following extracts from his annual report for 1867 will be of interest:—

Temperature of sun's rays in Ladakh (11,500 feet above the level of the sea).—“Dr. Cayley states that in Lé the heat of the sun is so powerful that a solar thermometer (with a blackened bulb in vacuo) rises “as high as 212° and 215° in the sun's rays, the temperature in the “shade being, at the same time, only 65° . This solar temperature is “nearly 25° above the boiling point of water at this elevation, and far “higher than has ever been observed in the plains. The extreme dryness “and rarefaction of the air are doubtless the reasons for the sun's rays “being so powerful.”

Weather at Pangi, in North West Himalayas (8,000 feet above the sea level).—“December 1866. Very cloudy on the 1st, from which date to the 7th “the days very clear. About one inch of snow fell on the 8th, and snow “also fell on the morning of the 9th. The 10th and 11th were very “cloudy; but from the latter date to the 27th the days were very clear “and bright. The last four days of the month were cloudy, and 2 inches “snow fell on the 31st.

January 1867.

“Generally cloudy up to the 7th. On the 3rd, 1 inch, and on the “4th, 2 inches of snow fell. More or less clear days from 7th to 13th, “but occasionally cloudy in the mornings.—On the 13th, 10 inches of “snow fell, and on the 14th three-and-a-half. From 15th to the 18th the “days were clear, but from the 19th to the 24th snow fell daily; as much “as seven-and-a-half inches on the 20th, one inch on the 21st, and one “inch on the 24th. On the 30th and 31st it snowed very heavily. Total “fall of snow 42 inches.

February 1867.

“Snow fell during greater part of the month, and a fall of 2 feet “was registered on the 18th. This appears to be the coldest month of “the year. The lowest temperature was 18° on the 14th. The total “fall of snow $62\frac{1}{2}$ inches.

“Maximum temperature	42° on 26th
“Minimum	18° on 14th
“Mean daily range	13°

March 1867.

" Snow fell very frequently this month, the total fall being 2 feet 11 inches. The first rain-fall occurred on the 21st, the second on the 31st.

" Maximum temperature .. 53° on the 20th

" Minimum .. 21° on the 7th

" Mean daily range .. 12°

" The wind often blew very high.

April 1867.

" Mostly cloudy and rainy days up to the 13th, from which date to the 17th the days were clear and bright. Rain on 17th and 18th; clear from 19th to 22nd. From 23rd to end of the month the weather was very rainy and cloudy. Snow fell on the 3rd, 7th and 27th. Total fall 6½ inches.

" Maximum temperature ... 60° on the 30th

" Minimum .. 31°

" Mean daily range ... 15°

May 1867.

" Clear weather up to the 6th, after which till the 16th it rained every day. From the 17th to the 24th fine clear weather prevailed; and from the 25th to the end of the month it rained mostly in the afternoon, although the mornings were always very clear. Six inches of snow fell on the 15th."

B.—Political relations with Native States.

5. STATISTICS.—From the statistics given in Appendix I. B—1 it will be perceived that there are 34 Native States in various degrees of feudal subordination to this Government. In addition to the above, the Punjab Government has *regular* political relations with the Independent State of Afghanistan (with which a treaty of alliance exists), and occasional communications with other States of Central Asia, such as Bokhara, Khokánd, Chitral, Badakshán, and Khotan; it has, further, continual relations, friendly or hostile, with a large number of independent Pathán and Biloch tribes on the North-Western Frontier.

6. It is proposed in the present section to record briefly what is noteworthy in the year's history of—

- (I.) Feudatory States under the management of British Officers.
- (II.) Feudatory States *not* under the management of British Officers.
- (III.) Our political relations with independent States and frontier tribes.

I. FEUDATORY STATES UNDER THE MANAGEMENT OF BRITISH OFFICERS.

7. BHAWULPUR.—*Progress of Administration.*—In the Administration Reports for 1865-66 and 1866-67 a brief account was given of the circumstances which led to the assumption of the management of the State by

the British Government, and of the measures of improvement effected during the first year of administration. These measures of improvement have been carried on with energy and success during the year under report. During the year every department of the State has been re-organized and placed on a better footing.

8. In the *Police* the pay of all ranks has been raised, so that no one is in receipt of less than Rs. 5 a month, and the men and officers have been divided into grades, so as to hold out to each a prospect of promotion for good service.

9. The *Army* has been re-cast, and the pay of the sepoys raised to Rs. 5 per mensem, being an increase of Rs. 2 per mensem on the pay heretofore received by them—an amount wholly inadequate to their wants.

10. In the *Revenue Department*, a new system of accounts, similar to that in force in British India, has been introduced, and an annual budget of income and expenditure prepared. The system is working excellently, and the general treasury accounts, which were heretofore in hopeless confusion and arrears, are now made up *within 20 days of the close of each month*.

11. The *Charitable grants* and *pensions* of former Rulers, amounting to Rs. 84,000 per annum, have been enquired into, and when supported by satisfactory evidence confirmed.

12. *State debts* to the amount of Rs. 93,000 have been paid off, and it is hoped that the entire public debt will be liquidated in three years.

13. The *Revenue* has been collected with ease, and it is expected that on the 1st October 1868 there will be a cash balance of Rs. 2,00,000.

14. In the *Judicial Department* the powers of Magistrates have been defined, and provision made for securing a record of cases and affording suitable facilities for appeal. During the year, 3,997 persons were apprehended for offences, of whom 2,494 were convicted and 944 acquitted, leaving 209 cases under trial at the close of the year. *Murders* (connected with women) were numerous; and the number of *thefts*, and especially *cattle thefts*, was high in proportion to the population; but house-breaking, dacoity, robbery, and other heinous crimes, were rare.

15. *Public works* have received great attention. A *jail* has been built at Bhawalpur, and placed under the charge of the Civil Surgeon, and arrangements are in progress for introducing the system of separate confinement.

16. *Dispensaries* have been established at Bhawalpur and Ahmadpur, and are largely resorted to. In these institutions native *hakims* are employed as much as possible; and arrangements are being made for educating a number of young men, the sons of native practitioners, in the European system of medicine, so as to fit them for the charge of dispensaries hereafter.

17. But the *greatest* efforts have been directed to what is a crying want in this arid region—the extension of irrigation from the great rivers: a large irrigation canal has been commenced in the eastern or desert portion of the State, and the first 22 miles, with an average depth of 10 feet and width of 50 feet, will be opened on the 20th June. To meet the cost of

this important work the sum of Rs. 1,68,000 has been raised by loan. In the lower portion of the State three of the principal canals have been extended six miles into the desert, at a cost of Rs. 30,000. The amount of new land which will be brought into cultivation by these extensions is estimated at 25,000 acres, and the increase of revenue at Rs. 12,500 per annum. On the new canal (above referred to) applications have been received for grants of land *amounting to 6,00,000 acres*, so that in the course of the next two or three years a very large increase of revenue may be expected. Arrangements are in progress for founding three large villages on the banks of the canal, and one of them has already been commenced. In short, the impetus given to the increase of cultivation by the presence and influence of a single British officer is such as to excite astonishment.

18. Lastly, a weekly newspaper, entitled the *Sadik-ul-Akhbar*, has been started at Bhawalpur and is issued as a State Gazette and *Moniteur*.

19. *Political events.*—The following events of *political* importance occurred during the year. Early in the year Muhammad Nizám Khan, the late Wazir, who had been one of the first to solicit the British Government to undertake the administration of Bhawalpur, and had been treated with the greatest consideration, suddenly resigned his appointment, and, proceeding to Lahore, forwarded to the Supreme Government a series of complaints regarding the administration of the State. Mr. Ford, the Commissioner of Multan, and the Agent of the Lieutenant Governor, was directed to proceed to Bhawalpur to investigate the charges, and Nizam Khan was directed to proceed to Bhawalpur to substantiate them. Excepting in the matter of fines for non-supply of labour at the time appointed for the clearance of the irrigation channels—the enforcement of which is imperatively necessary for the good of the community, and in the arrangements for the collection of customs, the defects of which were remedied as soon as discovered;—no grievance was urged by any one save Nizam Khan himself; and the motives which actuated him in the action he had taken were soon apparent. For it appeared on enquiry, that this official had, during his tenure of the *Wazirat*, been guilty of wholesale embezzlement of the revenues and property of the State, that he was strongly suspected of being concerned in the death of the late Nawab, and in the murder of the late Ghulam Muhammad Chaki, the Commander of the forces; and that, apprehensive of exposure, he had endeavoured to excite disaffection, and disseminate false rumours as to the acts and intentions of the British Government.

His presence at Bhawalpur being thus dangerous to the tranquillity of the country, he was detained, by order of the Supreme Government, in the Multan jail as a State prisoner, but has been recently released on security and permitted to reside at Dera Ismail Khan.

On the 25th September 1867, some disaffected men of one of the State regiments at Ahmadpur, led by several of their officers, seized a gun and endeavoured to excite a rising of the troops. The disturbance was at once put down by the rest of the troops, and the insurgents seized before the arrival of the Superintendent, who reached the scene of the disturbance within a few hours. Prompt investigation was made. The regiment which

had mutinied was broken up, and the Commandant and officers concerned in the out-break sentenced to various terms of imprisonment. Since then the conduct of the Bhawalpur troops has been excellent.

20. In the early part of 1868 the Lieutenant Governor made a tour through the eastern portion of the State, and on his arrival at Bhawalpur held a Darbar, which was attended by the young Nawab and all the principal chiefs and gentlemen of note in the State, who presented *nazars* and received valuable *khilats* in return. His Honor's visit is reported to have had the happiest result in assuring the minds of the reigning family as to the intentions of the British Government, which had been studiously misrepresented by Nizam Khan and other intriguing men.

21. At the close of the year under report, Mr. Ford, c. s., Commissioner of Multan, who, as Agent of the Lieutenant Governor, exercised general control over the affairs of Bhawalpur, proceeded to England on leave; whereupon Major Minchin, the Political Superintendent, whose ability, energy and tact have given great satisfaction, and rendered the administration highly efficient and popular, was constituted Political Agent as well as Superintendent of the State.

22. *Statistics.*—The following statistics of area, population, produce and trade in the Bhawalpur State will be of interest.

23. *Area.*—The territory of Bhawalpur, exclusive of the desert portion, is a narrow strip of country, of an average width of eight miles, extending for 300 miles along the left bank of the Sutlej, Chenab and Indus successively.

The area is 2,483 square miles, of which 1,781 square miles, or a little more than two-thirds, are culturable, and 702 square miles unculturable.

Of the culturable area, 1,111 square miles, or a little less than two-thirds, are cultivated.

Of the cultivated area, 3,43,702 acres, or 537 square miles, are irrigated by inundation canals; 1,07,680 acres, or 168 square miles, by wells; and 2,60,377 acres, or 406 square miles, by inundation from the river. There is no rain cultivation.

24. *Population.*—The population is estimated at 3,64,502 souls, of whom 10,000 are residents of the forts and isolated villages in the desert, leaving 3,54,502 as the number of inhabitants of the fertile portion of the territory. There is thus, in this latter portion, a population of 147 persons to the square mile.

Of the total population, 1,92,161 are returned as agriculturists, and 1,72,341 as non-agriculturists.

25. *Towns and villages.*—There are nine fair-sized towns:—

	<i>Population.</i>			
1. Bahawalpur,	28,250 souls.
2. Ahmadpur,	43,000 "
3. Kasairpur,	3,418 "
4. Udh,	2,159 "
5. Khanpur,	1,429 "

				<i>Population.</i>
6. Alláhábád,	1,777 souls.
7. Chachar,	3,500 „
8. Kót Sabzal,	1,880 „
9. Ahmádpur lamba,	3,675 „

The number of villages is 2,413.

26. *Produce.*—The total out-turn of produce during 1866-67 is estimated at 31,25,000 maunds or bushels of grain. The following statement shows the different kinds of produce grown during 1866-67, in lands irrigated by canals :—

	Number of acres under cultivation.	Yield in maunds of 80 lbs.
<i>Autumn Crops.</i>		
Rice,	1,37,865	8,00,000
Jowár, } millets,	58,270	3,50,000
Bájra, }	38,900	2,00,000
Indigo,	2,226	6,000
Sugar-cane,	329	3,000
Cotton,	2,219	12,000
Múng, Moth, and Mâsh, (vetches),	3,574	14,000
Til (Sesamum),	2,391	7,000
<i>Spring Crops.</i>		
Wheat,	72,500	7,50,000
Barley,	3,708	28,000
Gram (chick-pea),	2,132	8,000
Mustard,	987	4,000
Tobacco,	283	1,400

On lands irrigated by wells, the produce is either wheat, tobacco or turnips; on lands irrigated by river inundation, the entire crop is wheat or vetches, in the proportion of 3 to 1.

27. *Exports and Imports.*—The following tables show the principal articles of trade, and the places to and from which they are exported and imported :

I.—EXPORTS.

Name of Article.	DIRECTION IN WHICH EXPORTED.				
	Multán.	Bikanír and Jessalmír.	Fazilka, Sirsa and Ferozepore.	Sukkur.	Total.

The total value of exports during 1866-67 is estimated at Rs. 12,03,144 (*Ahmadpuri*) or about £90,000 sterling.

The total value of imports, Rs. 16,58,275 (*Ahmadpuri*) or about £120,000 sterling.

28. CHUMBA. This is a mountainous tract to the north of the Kangra district, locked in on almost every side by lofty ranges. It is bounded on the north and north-west by the territories of Kashmir; on the north-east and east by British Lahoul and Ladákh. Its area is estimated at 3,216 square miles, and its population, chiefly Rájput and Gaddí, at 1,20,000 souls, of which 6,000 reside in the capital. To the east is a region of snowy peaks and glaciers; on the west and south are fertile valleys; within its limits flow two of the five rivers of the Punjab, the Ravi and the Chandra Bhaga or Chenab; and the forests near their banks at Pangí on the Chenab, and Barmaor on the Ravi, are important sources of timber supply for the Railway and other public works in the Punjab.

29. At present the produce is chiefly confined to the ordinary grains: rice, millet, wheat, barley; and its exports to *Nurpur* (its commercial emporium) consist chiefly of grains, oak bark, and other spontaneous produce. Its botanical and mineral resources are as yet imperfectly

explored ; but veins of iron, copper and lead are known to exist ; excellent slate quarries have been discovered near the sanatorium of Dalhousie, and its soil and climate give promise of being suitable for the cultivation of tea.

30. The reigning family is an ancient Rájput dynasty, said to have been originally immigrants from Márwár ; and, owing to its isolated position, the principality is one of the few which escaped to a great extent the rapacity of Ranjít Singh.

31. Up to the year 1863, Chumba was a political charge attached to the Commissionership of the Trans Sutlej States ; but at the solicitation of the present Raja, the British Government consented to depute an English officer to act as his superintendent and adviser,

32. Lieutenant Colonel (then Major) Blair Reid, formerly a Deputy Commissioner in the Punjab commission, was selected for the post, and assumed charge of his office in January 1863 ; he was subsequently transferred to a better paid appointment under the Bengal Government, but in 1866 was re-transferred at his own request to Chumba. The progress made by the Chumba State since the time of the appointment of a British officer as Superintendent, will be best described in the following extract from the last annual report of Lieutenant Colonel Reid, dated 7th May 1868 :—

“ On the first appointment of a Superintendent in January 1863, the State was in debt to the extent of Rs. 1,20,000 and the current expenses were considerably in excess of the revenue, although at that time the receipts from sale of timber alone brought in Rs. 60,000 a year, and nothing whatever was spent on roads or public improvements of any kind. In fact, there was nothing better than a footpath in any part of the State. During the last five years the debt has been paid off ; 501 miles of road, of which 170 miles are available for mule traffic, have been made, and are kept in good repair ; the Raja has been provided with a suitable residence, and a Kucherry or Court house for the transaction of business ; a house has been built for the Superintendent, and bungalows for the use of travellers at Chumba, Chilka, Bagra, Batri, Sindhara, and Dand ; also two houses at Dalhousie. A dispensary and school have been established at Chumba ; and the Rajá's retinue, which was formerly extremely numerous but very inadequately paid, has been reduced in numbers, but placed on an efficient footing on increased pay. I have also, with the concurrence of the Raja, abolished several petty taxes, such as the Dúrbeal, Duman, Kagi, and others, which were vexatious and objectionable.

“ While these improvements have been effected, the revenue, which in 1863 (exclusive of receipts from sale of timber) amounted to Rs. 73,000, has, including the sum of Rs. 21,000 paid by Government for the lease of the forests, risen to Rs. 1,73,777 ; and the ordinary expenditure of the State has been reduced from Rs. 1,18,000 to Rs. 1,08,674, in which latter sum is included the pay of the Superintendent, (Rs. 1,200 a month), an entirely new charge. The saving in expense has been obtained chiefly by the reduction of useless establishments, and by maintaining a constant check on all expenditure, so as to confine it within the fixed estimates.

“The large addition to the revenue is owing to very considerable increase in land revenue, to commutation of begari or forced labor, to the resumption of the Sukét Raní's jagir (Rs. 6,500), and to the development of the resources of the State by realizing a large revenue from slates, lime, gypsum, &c. By the opening of roads throughout the country, valuable tracts of grazing land have been made available which were formerly inaccessible; and the revenue under this head has nearly doubled within the last five years, and is likely to increase still further.

“The general management is supervised by the Superintendent, in communication with the Raja; but the minor details are conducted chiefly by three native officials of rank, whose co-operation and advice I have found most valuable. The system in force is now so well established, that I find no difficulty in maintaining it, though at the outset I was met with many difficulties and obstructions. But the weak point in the system no doubt is that its maintenance depends entirely on the control exercised by the Superintendent, and any relaxation of vigilance on his part would inevitably lead to laxity of rule. Moreover, neither the Raja nor any of the members of his family have any aptitude for business, and although the native officials whom I have associated with myself in the administration of affairs are invaluable as coadjutors, none of them command sufficient weight or influence to keep in subjection the numerous factions that abound in this as in every other Native State.

“Interesting as such a charge is, I feel that it would be scarcely possible for any British officer to hold the situation of Superintendent unless he carried with him the good will of the Raja and of the majority of the people. That the administration on the original native system (i. e., without the introduction of English law or procedure, but controlled by a British officer possessing the powerful support of his own Government) is thoroughly appreciated by the Raja, and willingly acquiesced in by the population generally, is I think satisfactorily proved by the cordial assistance received by the Superintendent from the Raja's own followers, and by the absence of that factions opposition to existing authority which would inevitably be apparent if the presence of an European Superintendent generally were regarded with dislike or fear.”

33. PATOUDI.—On the death of Muhamamad Nakki Ali Khan, Nawab of Patoudi, (a small State of 41 villages adjoining the district of Gurgaon,) the management of the State, during the minority of the son of the deceased, was vested in Asgar Ali Khan, uncle of the present Nawab. But the latter having been convicted of harsh and arbitrary conduct and wasteful extravagance, the Lieutenant Governor deemed it desirable to dispense with his services in May 1867, and to place the new administration in the hands of Safdar Hosein Khan, Extra Assistant Commissioner of Gurgaon, under the general superintendence of the Commissioner of Delhi, Lieutenant Colonel McNeile, c. s. i.. The measure has proved highly beneficial, and satisfactory to the inhabitants of the State. A summary settlement of land revenue has been economically effected, and the peasantry protected against arbitrary enhancement of taxation; transit duties have been abolished; the State debts reduced from Rs. 58,581 to Rs. 23,472; and while the wasteful extravagance of former days has ceased, measures

have been taken for the encouragement of education by the establishment of five vernacular schools.

II. FEUDATORY STATES NOT UNDER BRITISH MANAGEMENT.

34. These are 31 in number, viz :—

Kashmír.	Suké ^t .	Dhámi.
Patiala.	Sarnúr (Náhan)..	Baghát.
Jínd.	Kahlúr (Bilaspore.)	Balsan.
Nábha.	Hindúr (Nálagurh.)	Mailog.
Kalsia.	Bussáhir.	Bija.
Máler Kotla.	Keonthal.	Tarooh.
Furíd Kot.	Bághal.	Kunhiar
Dojána.	Jubbal.	Mangal.
Loháru.	Bhajji.	Darkuti.
Kapúrthala.	Kunhársain.	
Mandi.	Kuthár.	

The only States in which events occurred deserving of notice in this report were those of Kashmir, Patiala, Kapurthala and Biláspur.

35. KASHMIR.—In consequence of the representations of Dr. Cayley, whose deputation to *Ladakh* to guard the interests of traders between Eastern Turkistan and British India was announced in the Report for 1866-67 ; and at the repeated and urgent request of this Government, His Highness the Maharajah consented—(1) to reduce the transit duties on goods passing between British territory and Eastern Turkistan, *viâ* Ladakh, to a uniform rate of 5 per cent *ad valorem*, calculated on the price entered in the invoice ; (2) to abolish other petty and vexatious cesses formerly exacted from traders ; and (3) to remove the prohibition against the transmission of the fine *Turfani* shawl wool (of which an abundance is produced in the countries north of Leh) through Ladakh to British territory. As might have been expected, these liberal measures were not adopted without reluctance. Asiatic States are eminently conservative, and the principles of free trade are foreign to their ideas of administration ; while in the case of Kashmir, the State officials, being all more or less engaged in trade, were personally interested in excluding competition in the field of commerce.

36. But His Highness has since evinced a creditable change of policy, and a marked desire to co-operate with the British Government in the development of trade ; he has now put an entire stop to the system of obstruction and espionage of which Dr. Cayley complained last year ; he has made considerable reductions in the inland transit duties of his own territory ; and has arranged for the establishment of annual fairs, to be held at Ladakh and Jammu, whither he has invited merchants of all countries to assemble, and he has further promised to bestow marks of honour upon those deserving of distinction for the excellence of the wares exhibited by them.

37. The practical results of these important reforms in developing trade between India and Yarkund are matters appertaining to the history of the current year ; but it may here be briefly stated that a large increase

of trade has already taken place, and that there appears to be a favorable opening for the remunerative export of piece goods, broad cloth, and Himalayan teas, in the direction of Yarkund; while investigations made by Dr. Cayley, and Mr. Forsyth, Commissioner of the Jullundur Division, have established the fact of the existence of a route from Lahoul (in British territory) to Yarkund, *viâ* the Pangong lake and the Chang Chenmoo pass, considerably shorter than that by Ladakh, while it has the great advantage of avoiding the *Karakorum*, and thus vastly reducing the physical difficulty of mercantile communication with Eastern Turkistan.

38. The present Ruler of Yarkund, Kashgar and Khoten, Yakúb Kush Begi, has evinced great anxiety to cultivate friendly relations with the British Government, and at the close of 1867 despatched an *Elchi* to the Maharajah; the *Elchi* subsequently proceeded to Lahore, and had an interview with the Lieutenant Governor; he has returned to his country by the new route, and promises to use his best endeavours to promote the growth of trade between his master's territories and British India.

39. Lastly, with a view of securing some protection to British traders in Yarkund, who complain that they suffer from jealousy and intrigues on the part of influential competitors, it is proposed to appoint a resident of Yarkund to act as *Aksakal*, or agent, for guarding the interests of British traders at that place. His appointment it is believed will be of great benefit to trade from British territory, while his position can be so regulated as to prevent the possibility of political complications.

40. PATIALA.—The administration of this State has been conducted since the death of the late Ruler and the minority of the present Chief, by a Council of Regency consisting of four of the State officials. The arrangement has upon the whole proved satisfactory; but during the past year dissensions arose among the members of the council, and as one of them, by name Kulwunt Rai, was convicted of intriguing against the interests of the State, and of other grave misconduct, it was deemed necessary to remove him from his post, and require him to retire from the territories of Patiala.

41. The young Chief possesses great intelligence, courtly manners, and an amiable disposition; and great hopes are entertained that he will eventually prove a good and enlightened Ruler.

42. KAPURTHALA.—The history of this State has, during the last two years, been marked by unhappy dissensions between the Raja and his two brothers Bikrama Singh and Suchet Singh. The late Raja, Nihal Singh, shortly before his decease in 1852, executed a testamentary document, in which he empowered the Raja's brothers to claim, if necessary, a partition of the fief. The Raja protested against the recognition of the late Raja's will, but it was accepted by Lord Dalhousie, and a few years since was partially acted upon in the case of the younger of the two brothers Kour Suchet Singh; the elder brother until lately elected to remain with his brother the Raja, receiving from him a cash allowance in lieu of his portion of the estate, and in consequence of the course he adopted was permitted by the Raja to accompany him, when in 1857 he led an auxiliary force to aid the British Government in crushing the rebellion in Oude; Bikrama Singh was thus enabled to earn distinction, and received

as a reward from the British Government the gift of a valuable estate in Oude; latterly, however, differences have arisen between Bikrama Singh and the Raja, in consequence of which the former has claimed execution of the will and the separation of his portion of the estate. The Raja repeated his protest against the recognition of the provisions of the will, as opposed to Hindu law and custom, under which a *raj* or chiefship is unpartable, and further urged that his brother had in fact waived the execution of the will, and had in consequence been enabled to obtain from Government the gift of a valuable estate. *

The Supreme Government, to whom the dispute was referred, decided that the provisions of the will are to be adhered to, and that unless the parties could come to terms, the separation of the brother's share should be carried into effect.

Against this decision the Raja has appealed to the Right Honorable the Secretary of State.

43. **BILASPUR.**—This is a small Hill State with lands on both sides of the river Sutlej; between the Trans-Sutlej and Cis-Sutlej portions of the State is a strip of territory known as the *pergunnahs* of Bassai and Bacherto, with an area of about 47,000 square miles; the tract once formed portion of the domains of Bilaspur, but was wrested from its Chief by the Sikhs, and on annexation came into the possession of the British Government.

44. The Rulers of Bilaspur have long desired the restoration of this piece of territory, but political considerations prevented compliance with their request.

These difficulties having been remedied by time, Her Majesty's Government have now been pleased, in consideration of the tried loyalty of the State, the excellence of its administration, and the circumstances under which the territory came into British possession, to consent to the restoration of the *pergunnahs* to the Raja, on payment of an annual tribute of Rs. 8,000, the amount of the land tax at present realizable therefrom. The *pergunnahs* of Bassai and Bacherto were accordingly made over to the Chief of Bilaspur with effect from the 1st October 1867.

III.—INDEPENDENT STATES AND FRONTIER TRIBES.

45. **AFGHANISTAN.**—At the conclusion of last year's report a battle was imminent between the forces of Sher Ali Khan and Faiz Mahomed Khan on the one hand, and of Afzul Khan, commanded by his son Abdul Rahman Khan, on the other. On the 18th September the engagement took place at Kila Kinah, and ended in the discomfiture of Sher Ali Khan and the death of Faiz Mahomed Khan. This event was followed on the 1st October by the death of Afzul Khan (whose health had been declining for some time) and the succession of his brother Sardar Mahomed Azim Khan. His succession was recognized by the British Government, and in December the agent of the British Government, who had been hitherto detained in Peshawar pending the civil wars following on the death of Dost Mahomed Khan, again took up his residence in Cabul. Meanwhile Sher Ali Khan fled to Herat; but, undisheartened by

his continued ill success, was at the close of 1867-68 making active preparations for a renewed attempt to recover his lost throne.

His efforts have been since crowned with success. On the 26th August 1868 he attacked the troops of Azim Khan at Panj Shahr, and after a brief encounter completely dispersed them. Azim Khan fled to the north, and Sher Ali Khan entered Cabul in triumph on the 8th September 1868.

46. **FRONTIER TRIBES.**—Without attempting to enumerate the various tribes and sub-divisions of tribes, which occupy the hilly boundary of the Punjab, from Hazara on the north to Sindh on the south-west, it may be here briefly stated that they belong to two distinct races; from Hazara to Dera Ismail Khan the hill tribes are the Pathan or Pashtú-speaking race; southward of Dera Ismail Khan they are *Biloch*. Both are warlike, revengeful and predatory, but in some important respects they differ widely. While the Pathan is essentially a republican, having little reverence for the person of his Chief, the Biloch respects and obeys the head of his clan; while the Pathan is bigoted and priest-ridden, the Biloch pays scant respect to the Syad or the Maulvi. Under these circumstances it may be readily understood that the conduct of political relations with Pathan tribes is a far less easy task than of those with our Biloch neighbours. Conciliate a Biloch Chief, and you, in most cases, conciliate the whole clan; the Pathan Chief, on the other hand, is, in most cases, the head of a dominant faction only, and friendship with his faction is enmity with the rest, while priestly influence is at work to thwart, it may be in a few hours, the conciliatory policy of years.

47. During the past year the *Biloch* portion of the frontier was peaceful, and a great step was made towards the establishment of friendly relations with the *Murree* and *Bugti* tribes of the south-west, by placing at the disposal of their chiefs a few native horsemen; their presence, while it adds dignity to the chieftain, enables the local authorities of Dera Ghazi Khan to exercise a beneficial influence at the head quarters of the tribe. The measure—which would be futile in the case of Pathan tribes—has in this case proved eminently successful; it has already enabled the local authorities to anticipate and prevent a projected raid, and extirpate a band of freebooters; and has so far encouraged the chiefs of those wild clans, that on arrival of the Lieutenant Governor at Bhawalpur, during the marching season, they left their native hills, and even crossed the Indus, to pay His Honor a visit of respect, an unprecedented indication of their friendly disposition.

48. The state of the Pathan portion of the border was less satisfactory. The *Jaduns*, north of the Indus, near Torbela, in violation of treaty engagements, erected a tower just outside our border, and levied tolls on passengers to the Othmanzai country, but desisted on threat of a blockade; the *Salarzais*, a branch of the Bonair tribe, bordering on Yusufzai, in prosecution of a private feud, entered British territory and burned a village of the Sadum clan: they were called on to send representatives to Mardan to apologize for their violation of British territory, and to pay indemnity for the outrage; and, acting under the direction of the Akhund of Swat, they have hitherto declined compliance with the above

demand, and are accordingly under strict blockade. The *Bazotis*, an insignificant clan, living in rocky fastnesses on the border of Kohat, espousing the cause of a British subject, against whom a Civil Court decree had been passed 10 years ago, by Colonel Edwardes, made a raid in force, which necessitated calling out a detachment of the Kohat garrison. The *Bazotis* were driven into their hills, but the affair cost the life of a gallant officer, Captain Ruxton, Commanding the 3rd Punjab Infantry. This tribe is also under strict blockade. A similar measure has been found necessary in the case of the *Mahsúd Waziris* on the Bannu frontier, and is still in force.

49. *Outrage upon Lieutenant Grey.* In July 1867, Lieutenant Grey, Officiating Deputy Commissioner of Dera Ismail Khan, proceeded in person to *Tibbi*, at the extreme south of the Dera Ismail Khan district, to arrest Kowra Khan, Chief of the *Kusranis* (a Biloch tribe, domiciled in British territory), on the charge of abetment of a murder, said to have been committed 5 years previously. The boat containing Lieutenant Grey's escort having missed the proper channel, he found himself at his destination almost without a follower. After waiting in vain for the missing escort, Lieutenant Grey imprudently determined to effect the arrest single handed. The chief and his son were summoned, and made over to Lieutenant Grey's orderlies, and were being marched to the river side; seeing this, the chief's tribesmen assembled in large numbers, flocked to the rescue, and forcibly released the prisoners; whereupon Kowra Khan, placing himself at the head of his followers, hastened back to Tibbi, seized Lieutenant Grey, (who had remained behind) and marched him into the hills beyond the border.

50. A hot pursuit was set on foot by the people of the vicinity, led by Sultan Muhammad Khan, Chief of Vehoa, and Lieutenant Grey was rescued after a few hours detention in the hills; but the offending chief for the time escaped. Endeavours had now to be made to secure the person and punishment of the offenders. This was admirably effected by Lieutenant Colonel Graham, Commissioner of the Derajat Division, who, without moving a soldier beyond the border, or even imposing a blockade, by his influence with border tribes caused Kowra Khan to be hunted down from hiding place to hiding place, and finally captured and delivered up to justice.

C.—Civil Divisions of British Territory.

51. The information required will be found in Appendix I. C., so far as such information is at present available.

The province of the Punjab was constituted a Lieutenant Governorship in 1859; it is divided for administrative purposes into ten Commissionerships or Divisions, of an average area of 9,567 square miles. The Divisions are sub-divided into an aggregate of 32 districts, with an average area of 2,992 square miles; and the districts are sub-divided into 122 tahsils or revenue sub-collectorates, and 298 thanahs or police stations. There are 417 Magistrates, who nearly all exercise the powers of Civil and Revenue Judges, and 15,644 Police, to a population of 17,593,946 souls.

D.—Population.

52. A census of the population of the Punjab province was taken on the night of the 10th January 1868; the general results are given in Appendix I. D., but a detailed report is under preparation by the Financial Commissioner. It will be perceived that the population of the Punjab, as ascertained by the present census, amounts to $17\frac{1}{2}$ millions; this is upwards of $2\frac{1}{2}$ millions in excess of the estimate of population based on the returns of the last census of 1854; the number of persons to the square mile averages 184; but in 2 districts the number exceeds 500, in 4 districts it is between 400 and 500, and in 3 districts it is between 300 and 400. The number of Europeans is returned as 17,938, Eurasians as 1,032, Native Christians 2,949, Sikhs 1,129,319, Hindus 6,134,243, Mahomedans 9,335,652, others 972,833. Of the above, 9,403,819 are returned as agriculturists, and 8,190,127 as non-agriculturists. Further remarks are reserved for a separate report.

E.—Fiscal Statistics.

SURVEY AND SETTLEMENT.

53. *Survey*.—The survey establishments under Lientenant Colonel Johnstone were employed during the year in making a trigonometrical and revenue survey, in Upper Hazara and Khagan. The maps are on the scale of two inches to the mile, and the village boundaries and all details of cultivation are shewn.

54. During the year the area triangulated was 2,000 square miles, and that surveyed 502 square miles; the cost per square mile was for the triangulated area Rs. 18, and for the surveyed area Rs. 76; the cost of the latter is high, owing to the exceedingly difficult nature of the country. Further details will be found in Appendix I E.—1.

55. *Settlement*.—The following districts were under Settlement during the year:—

Gujerat.
Gujeranwála.
Lahore.
Kangra.
Montgomery.
Hazara.

The Settlements of the two districts first named were concluded during the year; the Settlements of the Lahore and Kangra districts will probably be concluded before the close of 1868; at the conclusion of Settlement operations in Gujerat and Gujeranwála the establishments were transferred to Montgomery and Hazara, in which districts Settlement operations were commenced.

It is to be regretted that the Commissioner of Settlements has furnished no progress report of operations during the past year.

56. In the following districts the Settlements have expired, and are being continued from year to year until new Settlements are effected: Peshawar, Bannu, Dera Ismail Khan, Dera Ghazi Khan, Kohat, Multan,

Muzaffargarh, and part of Ludianah. In the following districts revised Settlements have been made, but have not been as yet reported or formally sanctioned : Amritsar, Gurdaspur, Syalkot, Gujerat and Gujeranwala.

57. The following abstract statement shows the dates on which the remaining Settlements now in force will expire, and the term of years for which the Settlement was made :—

Year.	Settlements expiring in the year.	Term of years for which the Settlement was made.
1869,	A small part of the Dehli district, ... Part of Rohtak district, ...	Less than 10 years. The greater portion for 30 years. Some for less than 10 years.
1870,	Hissar, ... Part of Rohtak, ... " of Dehli, ...	30 years. 30 " 30 "
1871,	A small part of Syalkot, ... Jhang, ... Part of Dera Ismail Khan, ... Part of Dehli, ... Do., ...	10 " 10 " 10 " 30 " 10 "
1872,	Gurgaon, ... Part of Karnaul, ... Do., ...	30 " 30 " 10 "
1873,	Jhelum, ...	10 "
1874,	Rawalpindi, ...	10 "
1876,	Greater part of Sirsa, ...	Under 30 "
1880,	Amballa, ...	30 "
1881,	Jalandhar, ... Part of Karnaul, ... Greater part of Ludianah, ...	10 " 10 " 30 "
1882,	Simla, ... Hushyarpur, ... Kangra, ...	Under 30 " For 30 " " 30 "
1883,	Firozpur, ...	" 30 "
1885,	Amritsar, ... Syalkot, ...	For 20 " " 20 "
1888,	A small part of Sirsa, ...	For 30 "
1893,	Part of Sissar, ...	" 30 "

58. *Surveyed and assessed area.*—Valuable information upon this subject will be found in Appendix I. E.—2. It will be perceived that the total assessed area in the Punjab and its Dependencies aggregates upwards of sixty-one millions of acres, of which not more than 21 millions are cultivated; of the cultivated area a little less than one-fourth is irrigated by wells and other private irrigation works, and little more than one-twentieth by Government irrigation canals; the rest is entirely dependent upon rain. Of the uncultivated area nearly four millions of acres are composed of grazing lands; nearly thirteen millions of acres (inclusive of the grazing lands) are culturable, and nearly 24 millions of acres unculturable.

The total assessment, amounting to Rs. 21,706,357, falls at the rate of Rs. 1-0-9 per acre of cultivated area, of 0-10-4 per acre of culturable lands, and 0-5-8 in total area assessed.

59. **VARIETIES OF TENURES.**—These statements are under preparation in the office of the Financial Commissioner, but have not yet been furnished.

60. **TRANSFERS.**—This statement has not been furnished by the Financial Commissioner; the information in regard to columns 5, 6 and 7 is not procurable without minute enquiry, which it would be unfair to impose upon our already overworked revenue establishments.

61. **LAND REVENUE**—The form prescribed by the Statistical Committee being found unsuitable, a statement showing the demand, collections and balances has been substituted, and will be found in Appendix I. E —6.

62. The total demand on account of land revenue in 1867-68 was Rs. 1,95,68,669; sub-divisible into the following main heads:—

Regular land revenue,	Rs. 1,81,85,969
Tribute and commutation for feudal service,	5,23,621
Miscellaneous revenue, of which the principal items were (1) grazing dues, (2) sale proceeds of wood from Government wood preserves, and (3) income from summarily settled lands not brought on the regular rent-roll,	8,59,019

63. Compared with 1866-67 the demand for regular revenue increased by Rs. 55,231, owing principally to the lapse of revenue-free estates, and the assessment of waste lands brought under cultivation, as will be seen from the following statement:—

	Increase.	Decrease.
	Rs.	Rs.
By lapses of revenue-free estates,	47,319	...
By grant of do.,	16,784
By revision of assessment,	3,027	7,391
By loss or gain of land by action of rivers,	56,671	50,129
By lands released or taken up for public purposes,	13	1,228
Assessment of waste,	15,110	...
Progressive increase of revenue demand,	7,683	...
Miscellaneous,	979	...
Redemption of land revenue,	39
	1,30,802	75,571
Net increase,	55,231	

64. Under the heading *Tribute* there was a decrease of Rs. 5,000, owing to the remission of that amount from the tribute of the Raja of Chumba, in consideration of lands made over for the new cantonments of Balún and Bakloh.

65. Under the heading *Miscellaneous* there was a net decrease of Rs. 88,800, chiefly owing to diminished sales of wood from Government wood preserves.

66. *Collections.*—Of the total demand of Rs. 1,95,68,609, all was collected during the year but Rs. 1,18,814, or a little more than $\frac{1}{2}$ per cent. Of this amount, Rs. 37,960 are returned as “in train of liquidation,” Rs. 30,202 “doubtful,” Rs. 42,868 “nominal” and Rs. 7,784 “irrecoverable;” the “nominal” balance is the result chiefly of revision of assessment; the remainder the result of suspension or remission of demand owing to inundations in the eastern districts and want of rains in the south-west. Upon the whole, the state of the land revenue during the year under revision must be considered very satisfactory.

PART II.

STATISTICS OF PROTECTION.

A. Legislative.

67. Forms II. A—1 and 2 (*Statements of Acts and Bills*) prescribed by the Statistical Committee are not applicable to the Punjab, which province has no Legislature of its own. The Statement of Draft Bills will be found in Appendix II. A—3.

68. *Acts passed with special reference to the Punjab.*—The following Acts were passed during 1867-68, with special reference to the Punjab:—

(1). Act XXXV of 1867—to provide temporary assistance to the *Financial Commissioner*.

This was a temporary Act empowering the Lieutenant Governor, with the previous sanction of the Governor General in Council, to appoint an additional Financial Commissioner, for the purpose of clearing off the arrears of Revenue appeals, which had accumulated during more incumbencies than one in the office of the Financial Commissioner. These arrears have now been cleared off, and the Act has ceased to have effect.

(2). Act III of 1868—to authorize the *Local Government of the Punjab* to invest any person with the powers of an Assistant Commissioner or *Tahsildar*.

Several Native gentlemen of rank and substance in the Punjab had from time to time been invested by the Local Government with power to hear and dispose of Civil suits within the local limits of their estates; and certain tribunals had been established in the Kangra district for the decision of suits relating to marriages and betrothals. But as no mention had been made of these in the Punjab Courts' Act, (XIX of 1865,) doubts had been entertained of their legality. This Act was accordingly passed to remove such doubts, and to enable the Lieutenant Governor to invest any person with the powers of a Civil Court, in the same way as he can, by the Code of Criminal Procedure, invest any person with all or any of the powers of a Magistrate.

(3). Act VII of 1868—the *Punjab Appeals' Act*.

When the Code of Civil Procedure was extended to the Punjab in 1866, the Chapters and Sections relating to regular and special appeals were excepted, and the local rules on these subjects previously in force

were retained, under which a license of appeal on matters of fact, as well of law, was permitted, unknown to the procedure of the Regulation Provinces. It was considered, however, after a year's experience, that the time had come for bringing the appellate system of the Punjab somewhat more into uniformity with that obtaining in other parts of India. With this view, the present Act was passed. The result is that, whereas, under the old rules, a suitor could appeal on a *matter of fact* from the Court of a Tahsildar to the Court of the Deputy Commissioner, from the Court of the Deputy Commissioner to the Court of the Commissioner, and from the Court of the Commissioner to the Chief Court—and in addition could move for a review of judgment in each of these four tribunals—it is now ruled that, where two Courts concur in regard to an *issue of fact* raised in a Civil suit, there shall be no further appeal in regard to such issue. On points of law, or on points regarding the construction of documents affecting the merits of a case, an appeal will lie, as before, up to the Chief Court, notwithstanding the concurrence of two subordinate Courts.

69. *Acts extended to the Punjab.*—The following Acts were extended to the Punjab during the year under report:—

(1). Act XXVIII of 1867—to remove doubts as to the legality of certain sentences passed by tribunals called *Petty Sessions Courts*.

Boards of Honorary Magistrates had been appointed from time to time in some of the principal cities of the Punjab, for the trial of petty offences. To remove doubt as to the legality of sentences passed by such Boards acting collectively, this Act, which was originally passed for the North-West Provinces only, was, under a power reserved in the Act, extended *mutatis mutandis* to the Punjab.

(2). Act XI of 1863—to consolidate and amend the law relating to the employment and remuneration of *Peons* for the service and execution of *Civil Process*.

The fees for the service and execution of Civil process in the Punjab had heretofore, (except in Courts of Small Causes) been levied in a lump sum on the institution of a suit, reckoned *ad valorem* on the value of the suit; and the surplus collections, after defraying the cost of service and execution, were credited annually to the Imperial revenues. It was considered by the Judges of the Chief Court that the system above described of levying process fees was inconsistent with the provisions of the Code of Civil Procedure, which contemplates a *fee per process*; further, that the system was objectionable in principle, for it had the effect of taxing suitors who required but few witnesses, for the benefit of those who required a large number; while the “compounding” for the service of processes, which was another feature in the old system in force in the Punjab, led to great abuse, in the reckless summoning of large numbers of witnesses and in encouraging unnecessarily protracted enquiries. Lastly, it was considered desirable that the surplus collections, instead of being, as heretofore, merged into the general revenues of the Empire, should be set apart and made available to the Local Government for the improvement of the administration of Civil Justice, as provided in Section 7 of Act XI of 1863. That Act, which was originally passed for the North-West Provinces, was

accordingly extended to the Punjab, under the authority given in Section 11, with effect from 1st November, 1867.

(3). Act XX of 1866—to provide for the Registration of Assurances.

The Registration system of the Punjab had heretofore been regulated by local rules, which acquired the force of law under Section 25 of the Indian Councils' Act, 1861. It was considered however that the time had arrived for a more perfect system than was provided in those rules. With this view, and to bring the Punjab Registration system into uniformity with that prevailing in other provinces, the Indian Registration Act of 1866 was, with the approval of the Government of India, extended to the Punjab, with effect from 1st January 1868.

B.—Judicial.

70. COURTS OF JUSTICE.—From Statement II. B—1, it will be perceived that there were at the close of the year 1867, 531 tribunals for the disposal of Criminal, Civil and Revenue cases; or about one tribunal to 33,000 persons. Of the Judges, 488 were stipendiary and 43 non-stipendiary; 234 were Europeans, and 330 Natives.

71. Of the above Courts, 43 exercised appellate as well as original powers; 10 were Courts of Sessions; while the Chief Court, composed of two Judges, one of them a barrister, was the final appellate authority in Civil and Criminal cases, and acted as a Court of original criminal jurisdiction in cases where European British subjects were charged with serious offences; and the Financial Commissioner exercised final appellate jurisdiction in Civil suits regarding land in districts where a Settlement was in progress.

72. ADMINISTRATION OF CRIMINAL JUSTICE.—*Number of cases, and by whom decided.*—The number of Criminal cases coming under judicial cognizance was 49,403, of which 13,698 were non-bailable and 35,705 bailable; of these, six were heard and decided by the Chief Court, 680 by Courts of Sessions; 683 by Magistrates invested with enhanced powers under Act XV of 1862; 21,474 or 45 per cent by single Magistrates exercising full powers, paid and unpaid; 16,983 or 36 per cent by Subordinate Magistrates of first class; 8,243 cases or 17 per cent by Subordinate Magistrates of the second class; 41,740 or 88 per cent were decided by *paid* Magistrates, and 5,643 or 12 per cent by *unpaid* Magistrates; 16,823 or 35 per cent by European, and 30,560 or 65 per cent by Native Magistrates.

73. *Number of persons and witnesses.*—The total number of persons brought to trial was 1,13,931, or 10,253 more than in 1866; the number of witnesses 1,19,201.

74. *Disposal of cases.*—Of the cases under trial during the year, all were disposed of within the year but 467 cases, affecting 971 persons, (or less than one per cent).

The average duration of trials was seven days, (counting from the date of the formal charge to the date of decision), and of preliminary enquiries (in cases where preliminary enquiries were held,) 13 days.

This is an increase of one day over the average duration of such cases in 1866. Of the witnesses, 1,19,201 or 89 per cent were discharged after one day's attendance, 9,905 or 7 per cent were detained two days, 2,690 or 2 per cent three days. On the whole, there is an improvement in the matter of detention of witnesses in nearly all districts as compared with the returns of last year.

Of persons tried for non-bailable offences, numbering 21,586, 3·2 per cent were committed to the Sessions, 58·6 per cent punished by Magistrates, and 38 per cent acquitted or discharged.

Of persons tried for bailable offences, amounting to 91,106, 10 per cent were committed, 61·9 per cent convicted, and 37·9 acquitted.

75. *Punishments.*—The following table shows the nature of the sentences passed :—

DESCRIPTION OF PUNISHMENT.	1867.	
	Number of persons punished.	Per-centage of the whole number.
Transportation,	157	0·2
Imprisonment with fine,	8,025	11·6
Do. with whipping.	173	0·2
Do. with fine and whipping,	252	0·3
Do. without fine or whipping,	3,614	5·2
Whipping and fine,	24	0·04
Whipping alone,	1,552	2·2
Fine alone,	50,975	74·0
Security for good behaviour,	1,852	2·7
Security to keep the peace,	488	0·7
Recognizance to keep the peace,	2,157	3·1
Total,	69,136	100

76. *Imprisonment.*—The following table shows the terms of imprisonment to which persons were sentenced :—

PERIOD OF IMPRISONMENT.	1867.	
	Number of persons sentenced to imprisonment.	Per-centage to whole number imprisoned.
For 15 days and under,	914	7·7
Above 15 days and not exceeding 6 months,	6,602	55·5
„ 6 months „ 1 year,	2,079	17·5
„ 1 year „ 2 years,	1,994	16·7
„ 2 years „ 5 do.,	241	2·0
„ 5 do. „ 7 do.,	8	} 0·5
For seven years,	31	
Transportation for seven years,	20	

Of the above, 3,976 persons were sentenced to solitary imprisonment.

77. *Fines.*—The following table shows the detail of fines imposed :—

DETAIL OF FINE.	1867.	
	Number of persons sentenced to fine.	Per-centage to total number of persons fined.
Rupees 5 and under,	40,651	68·6
Above 5 Rs. and under 50 Rs.	17,450	29·4
„ 50 „ 200 „	1,052	1·8
„ 200 „ 500 „	97	} 0·2
„ 500 „ 1,000 „	28	
Above Rs. 1,000,	2	

In all, Rs. 5,25,112 were imposed as fines, or on an average Rs. 8-0-9 per person, of which 75 per cent was realized; out of the above, Rs. 25,242 were paid to complainants as compensation, under Section 44 of the Code of Criminal Procedure. This is a great improvement compared with past years, viz., in 1862, Rs. 4,75,930 were imposed as fines on 31,976 persons, being an average of 14-9-0 per head, of which 53 per cent only was realized, and Rs. 14,992 paid to complainants as compensation. Thus it may be asserted that fines are now imposed with greater judgment, more fully realized, and the power of awarding amends to complainants suffering wrongful loss more freely exercised. Still His Honor thinks it would be well if Section 44 of the Code were even more frequently enforced.

The Judges of the Chief Court strongly advocate an amendment of the law, under which fines are only leviable from the moveable property of offender which may be found within the jurisdiction of the Court which sentences him, and recommend that they be recoverable from the moveable property of the person wherever it may be found.

78. *Whipping.*—The number of persons punished with whipping has steadily decreased during the last four years; indicating that whipping, as a sole punishment, is not ordinarily deemed sufficient for the crimes for which its infliction is sanctioned.

79. *Claims to maintenance.*—The number of claims for maintenance of wives and children, under Chapter XXI of the Code of Criminal Procedure, still continues to increase, notwithstanding that a stamp duty was imposed on these claims during the year. From the fact that out of 1,278 claims all but 337 were dismissed, it may be inferred that the great majority are false and vexatious, and fit subjects for taxation.

80. *Land disputes.*—The number of cases in which the assistance of the Criminal Courts was required in disputes relating to the possession of land, or the right or use of land or water, was only 48, a satisfactory proof of the promptness with which redress is obtainable through the Civil Courts.

81. *European British Subjects; Security.*—During the year 1,853 European British subjects were convicted before Justices of the Peace under 53 George III. Chapter 155; 488 persons were called upon to furnish security to keep the peace, a decrease of 86 as compared with the previous year; and 1,852 persons were called on to furnish security for good behaviour, being 139 more than during 1866.

82. *Sessions Cases.*—During the year under report, 352 cases, involving 711 persons, were committed to the Sessions. The proportion of convictions was 63·5 per cent of persons committed; this is not satisfactory, but it appears that the statistics are materially affected by the very large number of acquittals in the Mooltan Division,—a fact indicative of want of judgment, either in the committing magistrates or in the Sessions Judge. The average duration of trials before the Courts of Session (counting from the date of committal to date of sentence) was 60 days; in 1866 the average duration was 77 days.

The following statement shows the punishments awarded by Sessions Courts :—

	Number.	Per-centage.
Sentenced to death subject to confirmation of Chief Court,	76	17
„ to transportation for life, ...	113	26
„ „ for more than 10 and not exceeding 14 years,	3	0·7
„ „ „ 7 „ 10 „	11	2·5
„ „ 7 years, ...	10	2·3
„ to imprisonment for 7 years, ...	16	3·7
„ „ „ more than 5 and less than 7 years,	5	1·1
„ „ „ „ 2 and „ 5 „	67	15·4
„ „ „ not more than 2 years, ...	96	22·0
„ „ fine alone, ...	38	8·7

83. *Appeals.*—Of 41,263 persons who were convicted by Subordinate Magistrates, 6·2 per cent appealed; in appealed cases 13 per cent of the orders were modified, in 20 per cent reversed, in 2 per cent re-trials were ordered, in 60 per cent of the cases the original orders were not interfered with. The average duration of appeals to Magistrates (from date of lodging appeal to date of order on appeal) was 10 days; 22 cases, involving 84 persons, were pending at close of the year.

There were 3,853 appeals to Sessions Courts; in 75 per cent of these cases the orders were not interfered with, in 6 per cent the orders were modified, in 12 per cent reversed, in 1 per cent new trials were ordered. The average duration was 28 days; and 177 cases, involving 219 persons, were pending at the close of the year. The statistics of duration of appeals in Sessions Courts are not as satisfactory as could be wished.

84. *Chief Court.*—The Chief Court held five Criminal Sessions, in which 6 European British subjects were committed for trial. In all cases but one convictions were obtained. The case in which an acquittal was recorded was a charge of criminal misappropriation of Government money.

In this case the accused refunded the amount, and was severely punished departmentally; under these circumstances, and as there were extenuating circumstances in the case, the Government decided to offer no evidence for the prosecution.

85. Including 2 cases pending on 1st January, 44 cases involving 53 persons were referred to the Chief Court for confirmation of sentence

of death ; in 58 per cent of the cases referred sentence of death was confirmed, in 41 per cent the sentences were reduced, in 2 cases the persons were acquitted, and in one case a re-trial was ordered.

86. During the year there were 445 Criminal appeals, involving 612 persons, before the Chief Court ; of these, all but 25 were disposed of. In the case of 9 persons the orders were modified, in the case of 23 persons orders were reversed, in the case of 547 persons the orders were not interfered with.

87. As a Court of Revision the Chief Court called for 148 cases, involving 264 persons. In 26 per cent of the cases the original orders were upheld, in 24 per cent modified, 34 per cent reversed, and in 9 per cent re-trials were ordered. Upon the whole, the Chief Court disposed of, on the Criminal side, 604 cases, leaving 40 cases pending at the close of the year.

88. Upon the whole, the general results of the administration of Criminal Justice may be thus summed up. The number of Judicial tribunals has been increased ; native agency has been employed to a greater extent in the administration of Criminal Justice, and valuable assistance is beginning to be rendered by the burghers and gentry of the province, who, in the capacity of Honorary Magistrates, disposed of 12 per cent of the judicial business ; work has largely increased, but justice upon the whole has been promptly administered, and, judging from the statistics of appeal, well administered ; fines have been more judiciously imposed, and witnesses less frequently detained than heretofore. On the other hand, there was a falling off in the despatch of business by Appellate Courts, and the percentage of acquittals in cases committed to the Sessions was unsatisfactorily large.

89. During the year 1867, the following Circular orders on matters relating to Criminal Justice, were issued by the Chief Court :—

No. V dated 19th February, laying down rules for the guidance of Magistrates in regard to the custody of property sent in by the police.

No. VIII dated 29th March, prescribing revised statistical returns for annual reports on Criminal Justice.

No. X dated 8th April, mode of dealing with Criminal lunatics.

No. XI dated 9th April, laying down rules to prevent the illegal detention in jail of prisoners whose terms of imprisonment have expired.

No. XVII dated 25th June, rules for the disposal of cases by Magistrates which they are not competent to try, but which are triable by Deputy Commissioners invested with powers under Act XV of 1862.

No. XXII dated 12th July, scale of expenses to complainants and witnesses attending Criminal trials at the Chief Court on the original side.

No. XXIV dated 20th July, rules for regulating the commitment and order of trial of European British subjects, committed for trial to the Chief Court.

No. XXX dated 6th November, directing that District Superintendents of Police be allowed to inspect the register of convictions kept up in district offices.

No. XXXIII dated 14th December, scale of expenses of complainants and witnesses in Criminal trials before Courts subordinate to the Chief Court.

90. ADMINISTRATION OF CIVIL JUSTICE.—The statistics of Civil Justice will be found in Appendices II. B—6, 7, 8, 9, 10 and 12, which are drawn up in the form prescribed by the Statistical Committee.

91. *Number of suits.*—There has been at length a decrease in the amount of litigation in this province, which for the previous few years had been increasing at the rate of about 10,000 suits per annum. The number fell from 165,970 in 1866 to 144,628 during the year under report, but the number is still greater than the aggregate number of Civil suits in Bengal, Oude and the Central Provinces put together, and more than twice the number in the North-West Provinces.

The decrease is general, and is most marked in the case of suits for land, or the rent, revenue and produce of land, which decreased by 22 per cent, while other suits decreased in the ratio of 10 per cent.

92. *Cause of decrease.*—The general causes cited for this decrease are—

(1.) The increased rate of stamp duty leviable from petitions of plaint under the new Stamp Act.

(2.) The absence of a large portion of the community at the Hurdwar fair.

(3.) The sickliness of the last months of the year.

(4.) Growing caution on the part of bankers and traders to take written obligations for payment of money.

It would be natural, at first sight, to attribute the decrease principally, if not solely, to the enhanced stamp duties; but on examination of the returns it appears that in some districts the decrease is referable to periods antecedent to the introduction of the new Stamp Act, and in some again the number of suits instituted *after* the introduction of the new Stamp Act increased instead of diminished.

93. *Value and nature of suits.*—The average value of suits was Rs. 56, and the bulk of litigation was for sums of Rs. 20 and under, and only 13,013 suits out of 1,50,683 were for sums exceeding Rs. 100. As usual, parole debts, debts on written obligations and account were the staple of litigation. The total amount under litigation was Rs. 83,84,621.

94. *Disposal of suits.*—Of the total number of suits for disposal, amounting to 1,50,683, 96 per cent were decided during the year, at an average duration of 18 days, “as short a period,” remark the Judges of the Chief Court, “as is desirable or consistent with complete investigation.”

95. *By what Courts.*—Of the cases disposed of, 52 per cent were disposed of by Tahsildars (Native officials in charge of sub-divisions) or Naib Tahsildars (Assistants to above), 23 per cent by English and Native Assistant Commissioners or Extra Assistant Commissioners, 15 per cent by Small Cause Court Judges (vested with powers of final decision)

and 2·4 per cent by Honorary Civil Judges. In all, 85·8 per cent were decided by European and 64·2 per cent by Native agency.

96. *Nature of decisions.*—Of the suits decided, 36 per cent were decided on the merits; and of these, 18·8 per cent were decided wholly in favor of plaintiffs, 10·5 per cent partly so, and 13·1 in favor of defendants. Of the whole number of cases, 4·5 were decided *ex parte*, 22·8 per cent on confession of judgment, 4·9 per cent by arbitration, 18 per cent were dismissed in default, and 18 per cent adjusted or withdrawn. Compared with previous years, the number of cases disposed of *ex parte* has nearly doubled, and the number of cases dismissed in default of the appearance of the plaintiff has increased from 9·7 per cent to 13 per cent; on the other hand, the number of cases decided by arbitration has decreased from 6·7 per cent to 4·9 per cent. This is attributed to the introduction of the Code of Civil Procedure, which enacts greater punctuality in the attendance of parties than the Punjab Code, and disallows arbitration except on application of parties, whereas formerly arbitration was frequently resorted to under direction of the Court.

97. *Costs.*—The aggregate cost of suits increased from Rs. 7,33,947 to Rs. 8,13,855; and the per-centage of cost of suit to value from Rs. 8-10-8 to Rs. 9-0-0. The increase is attributed to increased stamp duty on plaints, to the more regular payment of witnesses' expenses, and to the more frequent employment of pleaders.

The income from process fees amounted to Rs. 2,01,014, of which Rs. 1,08,987 were expended, leaving a balance to the credit of the fund of Rs. 92,026.

98. *Execution of decrees.*—Of 85,676 decrees passed during the year, 33,136 or 38 per cent were put in execution during the year, and 31,295 applications were made for execution of decrees passed in previous years. The aggregate value of decrees put in execution amounted to Rs. 49,66,394. Of these, 30,325 or 42·9 per cent were completely executed—15,882 or 22·0 in part, 17,342 or 24 per cent struck off in default.

In the North-West Provinces in 1866 the per-centages were 29, 21, and 48.

Of the total amount realized by execution, (*viz.* Rs. 14,39,850) Rs. 4,23,026 or 29 per cent were paid voluntarily into Court; Rs. 8,01,907 or 55 per cent were paid after attachment, but before sale of goods; Rs. 2,14,907 or 15 per cent was realized by sale of goods after attachment. The above seems to indicate that non-payment was as a rule the result of neglect or unwillingness rather than inability to pay. 700 persons were imprisoned for debt during the year.

99. *Appeals.*—During the year 7,548 appeals were preferred to Deputy Commissioners, which with 569 pending appeals gave a file of 8,117 cases. Of these, all but 349 cases were disposed of during the year, at an average duration of 21 days, a period which, in the opinion of the Chief Court, cannot be much reduced. Of the appeals disposed of, 8 per cent were rejected; in 59 per cent the orders were confirmed; in 11·3 per cent the orders were reversed; and in 16·7 per cent the cases were returned for re-investigation. These results were much the same as last year.

Appeals to the Courts of Commissioners fell from 7,041 in 1866 to 5,832 cases in 1867. Including 1,358 cases pending, there were altogether 7,190 appeals for disposal; of these, 5,880 were disposed of, leaving 1,310 undisposed of at the close of the year.

The average duration of appeals to Commissioners' Courts was 72 days; this is not satisfactory.

Of 5,880 appeals decided by Commissioners, 70 per cent were rejected or confirmed, 14 per cent reversed or modified, and 15 per cent remanded for further investigation.

The number of appeals to the Chief Court fell from 1,543 in 1866 to 1,201 in 1867. Including 277 cases pending at the close of 1866, there were in all 1,478 appeals for disposal, of which 1,311 were disposed of, leaving 167 cases pending at the close of the year. Of the appeals decided, 37 per cent were withdrawn, transferred or struck off in default; 10·3 per cent were decided wholly, 23·5 per cent in part, in favor of appellant; 39 per cent were decided in favor of respondent; and 9 per cent were returned for reinvestigation.

100. *Miscellaneous cases.*—Besides the Civil suits, the District Courts disposed of 105 applications for the collection of debts on succession, under Act XXVII of 1860; 175 cases connected with the custody and disposal of intestate property, and 538 petitions for review of judgment.

101. *Working of Act VIII of 1859 (Code of Civil Procedure).* This was extended to the Punjab (after much local opposition) at the close of the year 1866. Of its working during 1867, the Judges of the Chief Court remark as follows:—

“The working of Act VIII of 1859 has been on the whole satisfactory. Certain irregularities in regard to the dismissal of suits on default and the appointment of commissions, are due, as stated in the earlier part of this report, more to the Courts themselves and their officials than to any defect in the Act. As the provisions of the Code become better known these irregular practices will, it is hoped, become less frequent. All that is required is that the Act should be carefully studied and constantly referred to, and that no order be passed under it without the Court satisfying itself that it is in accordance with the spirit as well as the letter of the law. If the Courts and their officials would comply with the procedure as strictly as they enforce a compliance with it on the part of suitors, no difficulty would be experienced in carrying out the provisions of the Act. Its success entirely depends upon the judgment and discretion with which it is worked by individual Judges, and neither the one nor the other can be exercised to any purpose without a perfect familiarity with its provisions.”

102. *Process fees.*—Act XI of 1863 (to consolidate and amend the law relating to the employment and remuneration of peons for the service and execution of Civil process,) was extended to the Punjab at the close of 1867; and under its provisions a system of charging a small *ad valorem* fee for each process issued was introduced in lieu of the system of charging a lump sum at the commencement of the suit for defraying the cost of all processes served. “It is generally admitted,” remark the Judges of the Chief Court,

“that the new method of levying process fees is a great improvement on the old system.”

103. *Registration*.—The number of deeds registered during the year was 75,107, against 61,202 in 1866. As in preceding years, obligations for the payment of money form the largest portion of deeds registered in 1867. The number of *Wills* registered increased from 60 in 1866 to 277 in 1867.

From the first of January 1868 the Registration Act, (XX of 1866) was introduced, and the result has, up to the present time, been most satisfactory, in regard to the number of documents registered and the income realized.

104. The following is an abstract of the principal Circular Orders of the Chief Court, relating to Civil Justice, issued during 1867 :—

No. VI dated 22nd February, laying down rules for regulating the practice and proceedings of the Chief Court in regard to the admission of appeals to Her Majesty's Privy Council.

No. IX dated 3rd April, prescribing revised statistical returns for annual reports on Civil Justice.

No. XII dated 10th April, explaining how far the provisions of Section I of the Punjab Civil Code, as to the jurisdiction of the Civil Courts of the Punjab, have been altered by recent enactments, in regard to the *subject matter* of suits.

No. XVI dated 4th June, reminding judicial officers of the provisions of the Code of Civil Procedure, and of the Punjab Chief Court Act, in regard to the transfer and withdrawal of suits and appeals; and suggesting that this course would be appropriately followed in certain cases where the Secretary of State for India is a party.

No. XVIII dated 2nd July, prescribing additional rules for the admission of Pleaders in Courts subordinate to the Chief Court.

No. XIX dated 9th July, regarding the Bankruptcy procedure of the Punjab Courts.

No. XXI dated 9th July, regarding the grant of probate and letters of administration under the Succession Act.

No. XXIII dated 12th July, regarding reference to arbitration.

No. XXVI dated 14th October, regarding mode of serving processes upon persons in the service of Government or connected with public departments.

No. XXVII dated 22nd October, prescribing rules for the employment and remuneration of peons for the service and execution of process, under Act XI of 1863.

No. XXVIII dated 25th October, regarding the extension of the Registration Act (XX of 1866) to the Punjab.

No. XXIX dated 25th October, relating to the award of interest in decrees.

No. XXXI dated 10th December, regarding execution of decrees beyond the jurisdiction of the Court by which they were passed.

No. XXXII dated 11th December, regarding service of process of Punjab Courts in the Bombay Presidency.

C.—Prisons.

105. STATISTICS.—An attempt has been made to furnish the statistics for the year 1867, in the form prescribed by the Calcutta Committee, but the subjoined abstract statement will give the principal statistics of jail administration for the past five years.

Year.	Num-ber of Jails.	Total number of prisoners	Daily average number of prisoners	CONDUCT AND DISCIPLINE.		Number of escapes.	HEALTH.			Cost per prisoner per annum.	Earning per prisoner per annum.
				Per-centage of convicted prisoners to total number on 31st December.	Per-centage of punishments for breach of Jail rules to total number of prisoners during the year.		Daily average per-centage of sick to strength.	Mortality for the year, calculated on total prison population.	Mortality for the year, calculated on daily average number of prisoners		
1863	26	28,771	9,834	10.4	6.3	17	4.84	2.29	6.71	37-11-6	14-2-9
1864	26	30,213	9,502	10.6	6.4	8	4.76	2.7	8.67	48-9-6	15-10-0
1865	26*	31,424	10,308	11.6	8.9	10	2.89	1.39	3.56	51-13-10	16-10-0
1866	26*	31,578	10,292	13.3	8.7	4	2.51	0.71	1.78	50-6-2	17-5-0
1867	26	32,686	9,969	14.1	8.2	15	2.86	0.77	2.53	54-8-3	17-4-0

* And a temporary jail.

Statement shewing the principal statistics of Jail Administration in the Punjab for the last five years, referred to in paragraph 105.

106. ACCOMMODATION.—There are 26 prisons in the Punjab; of these, *two*, viz., the *Lahore Central Jail* and the *Lahore Female Penitentiary*, are primarily *Provincial* jails for receiving long termed prisoners from all parts of the province, but they are used also as district jails for short termed prisoners convicted in the Lahore district; *three* jails, viz. those of *Ambala*, *Rawalpindi* and *Multan*, are *Divisional* jails for receipt of long termed prisoners convicted in the districts forming the Divisions of Ambala, Rawalpindi and Multan, provided such prisoners' sentence does not exceed ten years' imprisonment; they are also used as district jails for the districts in which they are situated, and for relieving district jails which may be crowded; the rest are district jails..

107. Of the above jails, those of Lahore, Multan and Rawalpindi are large jails, built on the radiating principle; *eighteen* are smaller jails, *not* on the radiating principle but originally constructed for prisons; *five* are *sarais*, or old buildings *not* originally intended for prisons.

108. The total prison accommodation for the Punjab, allowing 648 cubic feet of sleeping space for each prisoner, is *at present* sufficient for 9,387 prisoners, while the average number of prisoners for the year was 9,989. To relieve this deficiency of accommodation, two new jails,—one at Dera Ghazi Khan, and one at Montgomery—are *being* built; another at Bannu has been sanctioned, but has not been commenced for want of funds; the jail at *Jalandhar* is to be enlarged; and a new jail is to be built at the same station for the reception of European prisoners, and cells are to be provided in the jail at the hill station of *Dharmasala*, for the reception of European convicts whose health demands a change to a temperate climate; lastly, the jail at Amritsar and the Lahore Female Penitentiary are to be entirely rebuilt on an enlarged scale and approved principles. Meanwhile, in all jails where accommodation is insufficient temporary arrangements have been made, by the erection of sheds &c. in the jail enclosures, for meeting present requirements, and further relief has been afforded by hutting prisoners—(1) on the banks of the *Guygar* in the Ambala district, and (2) on the banks of the *Sohan* in the Rawalpindi district, and employing them on the important public works going on at those places.

109. JAIL POPULATION.—As above stated, the daily average number of prisoners during the year 1867 was 9,989, a decrease of 363 on the daily average of 1866. The total prison population passing through the jails was 32,696; so that the unit of the *daily average* jail population represents upwards of *three* individuals,—a fact to be borne in mind in considering statistics of mortality or disease calculated with reference to the daily average number of prisoners.

Of the total number of prisoners—

6,805	were released or acquitted on appeal,		
1,227	ditto	ditto	on payment of fine,
186	ditto	ditto	on account of good conduct,
49	ditto	ditto	on account of sickness,
12,215	ditto	ditto	on expiry of sentence,

89 were transported, 28 were sent to the Lunatic Asylum, 253 died, 5 escaped, 23 were executed, leaving 10,335 prisoners in jail at the close of the year.

110. HEALTH.—From Appendix No. II. C—2 it will be seen that the average per-centage of mortality to daily strength for the *last 10 years* ending with the year 1867, was 3·98; during the year 1867, the per-centage was 2·53; this is an increase compared with the mortality of 1866, when it was as low as 1·78; but, considering that the year 1867 was an unusually unhealthy year, that epidemic cholera was prevalent throughout the province for several months, and that more than half the prisoners who died were in a bad or indifferent state of health when admitted into jail, the per-centage of mortality cannot be considered high. The mortality amongst the free population during the same period is returned as 2·02 per cent; but as the mortuary returns of the free population doubtless *under-state* the real mortality, while the system of calculating mortality in jails on the daily average number of prisoners *exaggerates* the mortality—it is probable that the mortality in the jails was if any thing *less* than the mortality amongst the free population. In *seven* jails the mortality was below 1 per cent; in *sixteen* below 2 per cent. In the following 4 jails the mortality was especially high :—

PER-CENTAGE OF MORTALITY.

Peshawar,	12·64
Dharmasala,	12·59
Female Penitentiary,	10·26
Amritsur,	5·63

The high mortality in the *Peshawar* jail resulted partly from cholera, but chiefly from an out-break of *relapsing fever* introduced into the jail from the district; recent enquiries tend to establish the fact that this form of fever is *endemic* in the Peshawar valley and its vicinity, and the Sanitary Commissioner is, at present, engaged upon a searching enquiry into the history, origin and *habitat* of the disease in the Punjab, with a view of suggesting practical measures for mitigating its effects and arresting its progress when in an epidemic form. Meanwhile, additions and improvements have been and are being effected in the jails, which will prevent crowding and render a more effective quarantine for newly admitted prisoners possible.

In the *Dharmasala* jail 50 per cent of the mortality resulted from epidemic cholera. A policeman, who had just returned from leave and had travelled by the same route as the returning Hardwar pilgrims, was the first person attacked; shortly after, the disease appeared in the police lines adjacent to the jail; and almost simultaneously cases occurred in the jail. The healthy prisoners were promptly removed into camp, and the result was, that out of upwards of 100 prisoners only 7 deaths occurred. The prisoners who died from diseases other than cholera were all in a bad state of health when received into jail.

In the *Lahore Female Penitentiary* more than 50 per cent of the mortality resulted from epidemic cholera, and the rest chiefly from diseases of the stomach and bowels. On the 10th July the first case of cholera occurred; on the 11th the prisoners were moved into camp; from the 11th to the 20th July, five more cases occurred; and on the 21st the camp was broken up and a move made to a fresh ground;

no fresh cases having occurred the prisoners were brought back to jail, which had been meanwhile thoroughly cleansed, after which one more case occurred and the disease stopped.

In the *Amritsar* jail 4 out of the 32 deaths were from cholera, 9 from diseases of the stomach and bowels, 9 from fever; all those who died were admitted into jail in a bad state of health. The per-centage of mortality in this jail, 5.63 per cent on the daily average, was *less* than the per-centage of mortality in the city of Amritsar, which suffered severely from cholera and fever.

111. The system of subjecting newly admitted prisoners to fifteen days' quarantine and medical examination before allowing them to mix with other prisoners, referred to in the Administration Reports of 1865-66 and 1866-67, has been generally enforced, as well as circumstances permit; but, the Supreme Government having disallowed expenditure in the construction of new buildings for this object, the system can, at present, be only imperfectly carried out: but the fact that the relapsing fever, which was in times past a frequent visitant of our jails, appeared only in a single jail where quarantine was *not* enforced, and the fact that epidemic cholera though prevalent throughout the province for many months, only appeared in four jails, bear testimony to the beneficial effects of quarantine, even in the imperfect form in which it is at present enforced.

112. CONDUCT AND DISCIPLINE.—The conduct and discipline of the prisoners are reported as generally good, except in one jail; no emeutes occurred; the per-centage of prisoners punished for breaches of jail discipline was nearly the same as last year, and is undoubtedly high. The Inspector General of Prisons attributes this circumstance partly to the indifferent character of the ill-paid subordinate native jail officials, who connive freely at breaches of the regulations. He has been accordingly desired to submit proposals for improving the pay and position of these officials. Another circumstance tending to interfere with discipline is the natural desire of officers in charge of jails to show a good out-turn from prison manufactures; accordingly officers in charge of jails have been enjoined to consider the realization of manufactory profits as quite secondary to the enforcement of systematic jail discipline, and to carry out strictly the rules prescribed for dividing the sentences of prisoners condemned to rigorous imprisonment into fixed periods of "hard, medium and light labor," referred to in the last Administration Report. The system of estimating the good conduct of prisoners by a regulated system of marks has been for some years in force in the Central Jail, and has been recently introduced into the jails of Ambala, Multan and Rawalpindi. The system is excellent *when it can be properly supervised by English officers*, but its introduction into jails where there is no adequate European supervision is strongly deprecated by the Inspector General of Prisons.

113. The number of *re-convicted* prisoners in jail on the 31st December 1867 is returned as 44.14 per cent. This is a very low per-centage as compared with the number of reconvicted prisoners in English jails, and is some proof that our jail discipline, although less severe than that in force in English jails, is nevertheless deterrent.

114. **JUVENILE PRISONERS.**—The returns show that at the close of the year there were in jail 11 prisoners under 12 years, and 100 prisoners above 12 and under 16 years; of these, about 40, whose sentences were of a sufficiently long period, are confined in the Gurdaspur jail, where particular attention is paid to this class of prisoners, who are instructed in a variety of trades. In the case of other jails it has been a standing order for the last 18 years to keep juvenile prisoners as far as possible apart from other prisoners, and to devote special attention to their instruction. During the past year special attention has been called to the subject, and detailed rules issued regarding the custody and education of juvenile prisoners, their transfer from one jail to another, and their release and delivery to friends; and the attention of Magistrates has been specially drawn to the provisions of the *Apprentice Act*, under which power is given to apprentice children convicted of minor offences to parties willing to take charge of them and teach them useful occupations. These measures, though steps in the right direction, are in the Lieutenant Governor's opinion inadequate, and he hopes that the Supreme Government will see fit, ere long, to sanction the establishment of a juvenile reformatory at Lahore.

115. **FEMALE PRISONERS.**—All female prisoners sentenced to long terms of imprisonment are confined in the Lahore Female Penitentiary, which is superintended by a Eurasian matron with a staff of female warders. In the case of other jails, it has been heretofore the practice to place the key of the female ward in charge of an aged official of respectability. During the present year sanction has been given to the entertainment of Native matrons for the female wards of all jails, provided respectable persons can be found for the office.

116. **EDUCATION.**—At the close of the year, 43·24 per cent of the prisoners were under instruction; and out of 2,905 prisoners who were returned as being able to read, 1,949 are stated to have been taught to read in jail. The above facts show that attention is paid to the subject, and with some degree of success; but no great progress can be made unless the pay and prospects of jail teachers are placed on a better footing than at present; with this view the Inspector General of Prisons has, at the request of the Lieutenant Governor, submitted, in consultation with the Director of Public Instruction, a schedule of establishments required for the efficient working of the educational department of Jail management, which it is hoped will receive the sanction of the Supreme Government.

117. **ESCAPES.**—There were 15 escapes; but of these only 3 took place within the jail walls. The rest were escapes from extra-mural working parties.

118. **MANUFACTURES, &c.**—The following statement exhibits the earnings of the prisoners, whether direct or indirect:—

- | | | | | |
|--------------------------------------------------------------------------------------------------------------------------|----|----|----|----------------|
| (1.) Net cash profits of manufactures sold (exclusive of debts due and value of raw and manufactured material in store), | .. | .. | .. | Rs. 71,815 9 8 |
| (2.) Value of labor on articles manufactured for prison use, | .. | .. | .. | „ 30,838 14 9 |

(3.) Value of labor employed in public buildings,	Rs.	32,810	6	8
(4.) Value of labor employed in jail duties,	„	36,924	9	3
Total,		1,72,389	8	4

The amount is less by Rs. 5,944-8-8 than the amount realized last year; but, considering that the daily average number of prisoners was less, and the year unhealthy, and trade depressed, the decrease is not surprising. The average cash earning of each prisoner sentenced to labor during the year was Rs. 7-11-7, and the average cash earning of each prisoner employed in manufactures was Rs. 11-8-9, and the average earning per prisoner in cash or otherwise, calculated on the total daily average, whether sentenced to labor or not, was Rs. 17-4-1.

119. EXPENDITURE.—The following is an abstract of the charges :—

	Total cost.	Cost per prisoner.
Rations....	Rs. 2,25,201	Rs. 22 8 0
Fixed Establishment,	„ 1,61,926	„ 16 3 0
Contingent do.,	„ 50,263	„ 5 0 6
Hospital charges,	„ 12,563	„ 1 4 1
Clothing and bedding,	„ 38,373	„ 3 13 6
Contingencies,	„ 22,231	„ 2 3 7
Additions, alterations and repairs,	„ 34,034	„ 3 6 6

With a view of reducing the cost of *guarding* the prisoners, a system has been introduced experimentally into a few jails of relieving the police guard of the duty of furnishing night sentries, and entrusting the duty to the less costly agency of watchmen. If this system prove successful, it will effect a saving of about Rs. 10,000 per annum.

120. SUPERINTENDENCE.—During the year 1867, the large jails of Rawalpindi and Multan were placed in the executive charge of the Civil Surgeon, and since the commencement of the present calendar year, the jail at Peshawar has been placed in charge of the Civil Surgeon of that station; so that at the end of 1867-68 there were, including the Lahore Central Jail, and the jails at Ambala and Amritsur, *six* jails in the Punjab under the executive charge of Medical officers. Recently, authority has been received from the Supreme Government to place eight more jails under similar superintendence.

121. LAHORE THUGGEE SCHOOL OF INDUSTRY.—At the commencement of the year 1867, there were 134 inmates of this institution, *viz.*, 42 approvers, 39 wives of ditto, and 53 children. Of these, 8 men, 5 women, and 9 children died during the year, leaving 112 inmates at its close. Most of the men and women who died were very advanced in years. The mortality amongst the children was chiefly confined to those under 2 years of age. The cause was generally fever or dysentery, which diseases were unusually prevalent last year; but the unhealthiness is in part attributed

to the unsuitableness of the buildings at present occupied. A new set of buildings is in course of erection near the Central Jail, and, it is hoped, will be ready for occupation before the commencement of the rains.

The institution was financially prosperous, there having been a net profit of Rs. 4,084 on the sale of tents; while the cost of feeding, guarding, and looking after the inmates amounted to Rs. 4,697; so that the net cost of each approver was but Rs. 14-11-1 for the year.

The education of the children prospers fairly; all the boys above 12 years of age can read, and most of them can write.

D.—Police.

122. The statements prescribed by the Statistical Committee have not been fully adopted, pending a reply to a reference made to the Government of India in November 1867, but statements of a somewhat similar character will be found in Appendices II. D—1, 3 and 4.

123. **STRENGTH AND COST OF POLICE.**—The police force of the province is divided into two distinct bodies, the police of the Peshawar and Derajat Divisions, commonly called the Trans Indus Police, (including the six districts of Hazara, Peshawar, Kohat, Bannu, Dera Ismail Khan, Dera Ghazi Khan,) and the Cis-Indus Police, comprising the remaining 26 districts of the province. The Trans Indus Police is constituted on the old system, and is under the immediate control of the Deputy Commissioners of the several districts, subject to the *inspection*, but not the control, of the Inspector General of Police. The Police Cis-Indus is organized under Act V of 1861; the whole force is under the direction of an Inspector General of Police, who is also under Secretary to Government, assisted by four Deputy Inspectors General; the force in each district is under the control of a European officer, generally a military officer, with an Assistant, whose entire time is devoted to police duties, which he carries on under the *general* control of the Deputy Commissioner.

The following table shows the strength and cost of the police:—

I. Imperial police (cost defrayed from Imperial funds.)	Trans- Indus.	<div> <div>Inspectors, ... 7</div> <div>Deputy Inspectors, 81</div> <div>Sergeants, ... 276</div> <div>Men, ... 2,868</div> </div>	Total cost, Rs. 4,12,744
	Cis- Indus.	<div> <div>Inspector General, 1</div> <div>Depy. Insprs. Genl., 4</div> <div>District Supdts., 25</div> <div>Asst. Distt. Supdts., 29</div> <div>Inspectors, ... 39</div> <div>Deputy Inspectors, 397</div> <div>Sergeants, ... 1,656</div> <div>Constables, ... 10,311</div> </div>	

II. <i>Municipal</i> (cost defrayed from municipal funds.)	Trans- Indus.	{ Deputy Inspectors, 6 Sergeants, ... 41 Men, ... 734 }	Total cost, Rs. 52,052
	Cis- Indus.	{ Inspectors, ... 9 Deputy Inspectors, 14 Sergeants, ... 356 Constables, ... 4,180 }	Total cost, Rs. 4,24,094
<hr/> Total, Rs. 30,97,598			

It thus appears that the police force of the province (including municipal police) consists of 21,037 men and officers, or 1 policeman to 831 persons.

The total cost was Rs. 30,97,598, of which Rs. 26,21,452 was defrayed from imperial, and Rs. 4,76,145 from municipal funds.

The average cost per head of population was Rs. 0-2-10; this may at first sight appear somewhat high. It is to be observed, however, that the regular police are now employed on many duties the cost of which is not ordinarily chargeable to police estimates, such as escorting treasure, (a very heavy duty in the Punjab, where in consequence of the presence of a large army, cash remittances are frequent), in guarding jails, and furnishing personal guards for officials &c., and in the Peshawur Division the police perform duties similar to those performed by the *Militia* of the South-Western Frontier.

During the year under report, no less than 8,958 men of all ranks were employed in escorting treasure, and on an average 1,214 men were daily employed in guarding jails and prisoners removed into camp on account of epidemics. After making allowance for all the extra duties imposed on the police, the strength and cost of the police employed on purely police duties in the province will be reduced to a very moderate figure.

124. *State of crime as compared with the year 1866.*—The number of offences reported during 1867, was 61,062, or 4,906 in excess of the previous year.

The increase occurred chiefly in the following classes of crime:—

	1866.	1867.
Murder and attempts to murder,	314	320
Culpable homicide,	94	108
Causing greivous hurt,	326	342
Rape,	147	159
House-trespass with violence,	42	48
House-breaking,	7,183	7,983
Dishonestly receiving stolen property,	1,147	1,367
Poisoning cattle,	265	289
Serious mischief by fire,	67	164

Cattle thefts,	3,685	3,978
Forgery,	40	69
Enticing away married women,	1,175	2,032
Nuisances,	676	1,664

On the other hand, in the following classes of crime a decrease took place:—

	1866.	1867.
Public servants receiving bribes, ..	206	195
Offences against the public peace, ..	1,376	1,312
Adultery,	214	165
Dacoitee,	22	14
Robbery,	172	164
Ordinary thefts,	9,419	9,121
Criminal misappropriation,	813	670
"Assault," "use of criminal force," and "causing hurt,"	12,847	12,621

The increase in the number of cattle thefts is confined to a few districts, and is attributed to a great rise in the value of cattle, consequent on a considerable mortality among cattle in the beginning of the year from dearth of grass. This, of course, stimulated the activity of cattle stealers.

On the other hand, the decrease of ordinary thefts is attributed to the excellent spring harvest, which lowered the price of food, and diminished the temptation to casual theft.

The steady decrease in organized violent crime is fairly attributable to the success of the police of late years, in apprehending and convicting gangs of robbers and dacoits.

The increase in the number of prosecutions for receiving stolen property, combined, as it is, with a decrease in cases of theft, is an indication of police activity rather than of an increase of crime.

The increased number of cases of "nuisance" is the result of a more active enforcement of sanitary laws.

The decrease in the number of complaints of "assault," "using criminal force," and "causing hurt," is probably the result chiefly of the imposition, during the year, of a stamp duty on such complaints. These complaints, the majority of which, it will be seen, are groundless and vexatious, have been of late years (since the abolition of the stamp duty formerly in force) increasing so rapidly as to be not only a great tax upon the valuable time of judicial officers, but a serious inconvenience to the large number of persons unnecessarily summoned to answer or give evidence in such cases. Some idea of the extent to which resort to legal procedure in this class of cases is abused, may be formed from the fact that, out of 27,958 persons summoned in 1867, to answer petty charges of "assault," "using criminal force," and "causing hurt," no less than 17,830 were acquitted or discharged. Objections have been urged to the

imposition of stamp duty in these cases, as being a "tax on justice," but such an argument is hardly applicable in a province where two-thirds of the cases are found in practice to be false or frivolous; under such circumstances, the imposition of a moderate stamp duty appears at once a legitimate and desirable measure, provided magistrates have a discretion (which they have under the present law) to remit the stamp duty whenever satisfied that the complainant is too poor to advance it.

125. *State of crime as compared with other provinces and with England.* Compared with other provinces of India and with England, the number of murders in the Punjab is great in proportion to the population, but the excess is confined to frontier districts, where the people are armed, blood feuds rife, and evasion of justice by flight beyond the border a matter of the greatest facility.

Organized and professional heinous crime, such as robbery and dacoitee, is remarkably rare; house-breaking is less common than in most provinces of India, and ordinary thefts far rarer in proportion to the population than in England or other parts of British India.

It would be interesting to compare the state of crime in British territory with the state of crime in adjacent Native States; hitherto, however, the absence of reliable statistics of crime in Native States has rendered this impossible; but during the year under report, reliable statistics of the number of thefts and burglaries have, for the first time, been obtained from the Native State of Bhawalpur; from these it appears that during 1867 thefts and burglaries were nearly *three times* as numerous in proportion to the population as in British territory, as will be seen from the following table:—

	Population.	Cases of theft and burglary in 1867.	Ratio to population.
British territory (Punjab,) ...	17,000,000	21,100	1 to 800
Bhawalpur,	3,66,500	1,250	1 to 293

126. *Police administration.*—The working of the police, as tested by the per-centage of cases brought to trial, and of persons discharged and acquitted in non-bailable cases cognizable by the police—(1) in Cis-Indus districts, where the new police system is in force, and (2) in Trans-Indus districts, where the old police system continues, is exhibited in the following table:—

DIVISION.	Year.	CASES.			PERSONS.						VALUE OF PRO- PERTY.		
		No. of offences.	BROUGHT TO TRIAL.		No. apprehended.	Dis- CHARGED.		ACQUIT- TED		Total discharged and acquitted.	Stolen.	Recovered.	Per cent recovered.
			Number.	Per cent.		Number.	Per cent.	Number.	Per cent.				
Cis-Indus, ...	1866	17,920	9,262	51.6	14,959	8,192	21.3	1,901	12.7	94	6,20,640	2,49,673	40
	1867	19,651	9,251	47.7	16,040	8,834	23.9	1,621	10.1	34	6,10,419	2,37,490	39
Trans Indus,	1866	4,839	2,832	50.5	4,057	1,041	25.6	986	24.3	50	1,87,952	42,572	22
	1867	4,388	2,249	51.2	4,215	1,145	26.9	910	21.4	48	2,00,607	56,613	28

As might have been expected, the police were far more successful as a rule in large cities than elsewhere, as will be seen from the following table:—

	Population.	Non-bail- able offen- ces.	Per-centage brought to trial.	Per-centage of per- sons arrested acquit- ted and discharged.
Lahore,	98,566	342	48	19
Amritsar,	1,35,813	330	59	27
Delhi,	1,54,417	552	51	34
Cis-Indus Provinces,	19,651	47.7	34

The following table shews the success of the police in regard to some of the principal non-bailable offences:—

CRIME.	No. of cases.	Per-centage brought to trial.	Per-centage of persons arrested acquitted and discharged.
Murder,	288	72	53
Dacoitee and robbery,	176	51	39
House-trespass,	8,087	20	39
Theft,	13,099	56	35

127. In addition to purely police duties, the police furnished guards to 26 jails, containing an average of 9,989 prisoners, of whom only 15 escaped; furnished treasure escorts aggregating 8,959 men; collected the mortuary returns of the province; and were of the greatest service in maintaining quarantine cordons during the prevalence of cholera.

128. The police of this province further supplied 383 men to assist in preserving order at the Hurdwar fair, to the entire satisfaction of the local authorities.

129. The *conduct* of the force during the year was generally satisfactory. Out of a force of 20,899 men of all ranks, 271 or 1·2 per cent were punished judicially, and 4,056 or 20 per cent departmentally, during the year; the conduct of the force during the prevalence of cholera epidemic was most exemplary.

Resignations during the year amounted to 6 per cent, and occurred chiefly among 2nd class constables, who receive only Rs. 6 per mensem.

130. Police accommodation is still considerably deficient, but as the Supreme Government has been pleased to sanction a more liberal budget for police buildings during the current year, it is to be hoped that a better state of things will be shewn in next year's report.

131. *Conclusion.*—The Lieutenant Governor having now for upwards of three years watched the working of the two police systems, the old system and that set on foot under Act V of 1861, side by side, has no hesitation in bearing testimony to the superior efficiency of the *new*. Under the new system organized crime is far better kept in check, offences are more accurately recorded, the people are less oppressed, illegal and unauthorized arrests are rarer, while reliable information of what is going on is promptly furnished to the Government. There is doubtless much to improve in the *new* police, and it is unfortunately saddled with a large number of the old military police, whose previous training and habits rendered them anything but fit material for the detective duties of an organized constabulary; but with all these drawbacks, the new system has been, His Honor considers, a success, and he would strongly deprecate any change in the law, which would render the disintegration of the police force, or any recurrence to the old system, feasible in Cis-Indus tracts.

E.—Military.

132. **ARMY IN THE PUNJAB UNDER HIS EXCELLENCY THE COMMANDER-IN-CHIEF.**—The portion of the Indian Army quartered in the Punjab under the immediate orders of His Excellency the Commander-in-Chief, irrespectively of the Frontier Force, amounted during the year to 28,611 men; of whom 13,347 were British, and 15,264 Native soldiers, with 180 guns, distributed as follows.

Where stationed.	British.	Native.	Total.	Guns.
Dehli, ...	246	864	1,110	6

133. PUNJAB FRONTIER FORCE.—*Strength and Cost.*—Appendices II. E—1, 2 and 3 give the statistics required in regard to the Frontier Force under the orders of the Punjab Government. From the first of these it will be seen that the force mustered on the 1st May 1868, 12,828 men of all arms, the total cost being Rs. 35,65,412, as follows :—

Arm.				Strength.	Cost.
Artillery,	718	2,00,826
Cavalry,	2,827	12,84,244
Infantry,	9,281	20,08,119
Staff,	2	87,223
Total, 1867-8,				12,828	35,65,412
Total, 1866-7,				11,667	34,68,113

134. *Out-posts.*—The various out-posts held by troops of the Punjab Frontier Force in conjunction with the Frontier Militia are detailed in Appendix II. E—4. The force employed in defence of the border numbers 1,611 men, of whom 945 are Cavalry and 666 Infantry. Some changes have been proposed in the position of posts on the Dera Ismail Khan border, and Major General Wilde has selected new sites for posts opposite the mouth of the Girnee and Zam passes.

135. *Raids.*—There have been no raids during the past year of any prominent interest. Indeed, it may be said that raids on any large scale are now very seldom attempted, and that in this respect the conciliatory policy steadily pursued of the Government in the administration of the frontier has been eminently successful. There have been as usual a number of cases of cattle-lifting by small parties of marauders, attended with a few cases of murders and wounding; but the only cases that seem to be worthy of separate notice are the following.

136. On the 25th February 1868, a party of Haihat Kheyl Waziris, variously estimated from 20 to 60, made a dash into the plains near the *Girnee* Pass; they fell on a party of Bittanis, carried off 10 bullocks; were pursued by a guard of 1st Punjab Cavalry, who rescued the bullocks and wounded one of the marauders.

137. Again, in April 1868, a body of Shingi Kheyl Waziris attacked the village of Dabbra on the Dera Ismail Khan border. Taking advantage of a dark and stormy night they succeeded in reaching the gate-way of the village without being observed. They killed one man and wounded three others.

138. On the 10th March, an attack was made on the Ooblun towers on the Kohat border by a party of Bazoti Afridis. They were repulsed and dispersed about 1 p. m. During the following night information was received that a further gathering had taken place, and that a raid

was intended. The troops were called upon to act, and a wing from each of the 3rd and 6th Punjab Infantry, a troop of 3rd Punjab Cavalry and 2 mountain guns moved to the threatened spot. The marauders were easily driven back to the higher range of hills, up which it was not intended to follow them; but these intentions were not thoroughly understood by Captain Ruxton, Commandant 3rd Punjab Infantry, who gallantly but unfortunately led his men to the attack of a position which was impregnable. In this assault Captain Ruxton fell, with 9 of his men, Lieutenant Mackinnon was severely wounded. Some loss was inflicted on the Bazotis, and they have not since shown any hostile demonstration. In Captain Ruxton the Government has lost a gallant and promising officer.

139. *Thefts and cattle-lifting on border.*—The following is an abstract of cases of cattle-lifting on the Bannu and Derajat borders, some of which were attended by murders or wounding:—

				Murders.	Wounding.	Cattle-lifting.
Bannu,	17
Dera Ismail Khan,	5	4	64
Rajampur,	5	1	4
Total, 1867-68, ...				10	5	85
Total, 1866-67, ..				8	6	72

140. *Horse-breeding.*—*Stallions.*—The usual annual fairs have been held during the year at Rawalpindi, Multan and Amritsar. The following statement exhibits the number of stallions distributed over this province:—

Description.	1st May 1867.	Received.	Disposed of.	Made over to Native Chiefs.	Remaining on 1st April 1868.
English, ...	2	...	1	...	1
Colonial, ...	2	1	...	1	2
Arab, ...	28	6	1	...	33
Stud-bred, ...	21	8	3	...	26
Country-bred, ...	1	1	...
Total, ...	54	15	5	2	62

141. Some attention has been given to Mule breeding. Two Donkey stallions have been received from Turkish Arabia, and eight others from Bokhara.

142. *Volunteer Corps.*—The two Volunteer Corps have maintained their efficiency and numbers.

The 1st Punjab Volunteer Rifle Corps (Lahore) had during the year an average strength of 109 members, were inspected on 4th January 1868 by Major General Rainier, Commanding Lahore Division, and have gone through the annual course of musketry.

The 2nd Volunteer Corps (Simla) had during the year an average of 140 members, were inspected by Major General Becher, c. B., Commanding Sirhind Division, on 28th October 1867, and have gone through the usual course of musketry.

F.—Marine.

143. Appendices II. F—1 and 2 give the statistics prescribed by the Calcutta Committee.

144. *Vessels.* The Punjab Government Flotilla during 1867-68 consisted of—

The *Napier*, 90 horse-power, (out of commission,)
 The *Jhelum*, 60 horse-power,
 The *Chenab*, 60 horse-power,
 The *Byas*, 35 horse-power, (stern-wheel,)
 Three Flats, and
 Two Barges.

The *Napier*, being much worn, was put up for sale in September 1867, but there were no bidders; and she is now being patched up and repaired so as to answer as a reserve vessel in the event of an accident happening to any of the others. The cabin accommodation of the *Jhelum* has been improved, and she has been supplied with a new boiler. A slip is in course of construction at the head quarters of the Flotilla at Sukkur, to enable vessels to be hauled up for the purpose of repair or examination.

145. *Voyages.* During the year, the *Jhelum* made four trips up and down river, the *Chenab* 6 trips up and 5 down, and the *Byas* 5 trips up and down. The stern-wheel steamer *Byas* continues to work satisfactorily.

146. The arrangements for fuel supply have been defective, but measures have been taken for placing them on a better footing by appointing officers for the special duty of seeing that good fuel is economically supplied to the Flotilla.

147. *Earnings.* The following is a statement of the earnings of the vessels for the last six years:—

1862-63	Rs. 9,219
1863-64	„ 18,469
1864-65	„ 16,014
1865-66	„ 50,231
1866-67 (11 months)			„ 45,949
1867-68	„ 85,953

From the above it will be apparent that the earnings of the Flotilla have been steadily increasing year by year, and that the earnings of

1867-68 have been considerably in excess of those of former years. Of the total earnings of 1867-68, *viz.* Rs. 85,953, Rs. 75,488 were *pro formâ*, being the nominal freight of Government stores conveyed up and down the Indus.

148. The down freight had somewhat diminished, owing to the depressed state of trade, but there was a great and increasing demand—often larger than could be met—for tonnage for the up trips. The Flotilla is, as might be expected, at present worked at a loss; but, as shown above, the earnings are steadily increasing, and if *regular* steam communication is kept up, and continued efforts be made to supply steamers suitable to the navigation of shallow waters, there can be little doubt that in a few years a considerable trade will be developed—sufficient more than to cover the cost of navigation.

149. *Income and Expenditure.* Annexed is a statement of the income and expenditure of 1867-68, as compared with those of the 11 months of 1866-67 :—

Income.	1866 67 (11 months)	1867 68	Increase	Decrease	Expenditure	1866 67 (11 months)	1867 68.	Increase.	Decrease

* Exclusive of several heavy items, of which valuation statements had not been received up to time of report.

PART III.

STATISTICS OF PRODUCTION AND DISTRIBUTION.

A.--Finance.

150. The Accountant General has expressed his inability to furnish the statements prescribed by the Statistical Committee, but he has furnished the usual financial statement showing the receipts and disbursements of 1867-68 (exclusive of those of the Military and Public Works Departments) as compared with the receipts and disbursements of the previous twelve months, which is given in Appendix III. A.

The general result is as follows:—

Period.	Civil Receipts.	Civil Disbursements, exclusive of Public Works expenditure.	Surplus.
1st May 1866 to 30th April 1867, ...	3,25,39,520	1,18,44,437	2,06,95,083
1st April 1867 to 31st March 1868, ...	3,28,31,070	1,23,06,551	2,05,24,519
Difference,	+2,91,550	+4,62,114	—1,70,564

It will be seen from the above that while the revenues of the province have increased by nearly 3 lakhs, the expenditure has increased by more than 4½ lakhs. The causes of these increases will now be noticed in detail.

151. *Receipts.*—The following heads of receipt exhibit increase:—

Land revenue,	Rs. 1,47,630
Abkaree,	„ 13,766
License Tax,	„ 4,61,216
Customs,	„ 18,657
Opium,	12,014
Stamps,	2,96,422
Law and Justice,	37,466
Police,	26,853
Education,	15,122

Total, Rs. 10,29,146

Of the increase under *Land Revenue*, Rs. 80,000 is due to increased collections of the fixed demand, resulting partly from lapses of rent-free

estates, and partly from river accretions, and the assessment of waste lands; the remainder is chiefly nominal, and is due to the sale proceeds of rukhs being credited to this head during 1867-68, while in the previous year they were taken to credit of *Forests*. The realizations of the *License Tax*, collected under Act XXI of 1867 have amounted to upwards of 4½ lakhs. The increase under *Stamp* revenue is partly due to an increase in the sale of non-judicial stamps, but chiefly to the operation of Act XXVI of 1867, whereby the *ad valorem* charge for institution fees for plaints was re-adjusted so as to fall more heavily on suits of large value, and suits for real property. Of the increase under *Law and Justice*, about Rs. 26,000 are due to Registration Fees collected under Act XX of 1866, from 1st January 1868, from which date the Act was extended to this province. The increase under *Police* is on account of increased contributions from Municipalities towards the cost of Municipal police. Of the increase shown under *Education*, about Rs. 8,000 are due to extended operations of the Government Central Book Depot; the remainder is due to increased collections of school fees, &c.

152. The heads of decrease are:—

Tributes,	...	Rs.	3,064
Forest Revenue,	..		2,07,003
Salt,	..		4,64,391
Marine,	..		2,473
Interest,	.		3,059
Miscellaneous,	...		57,606

Total, Rs. 7,37,596

The decrease in *Forest* revenue is nominal, and is accounted for—1st, by the receipts for March 1868 (estimated at half a lakh) not being shown, as the accounts for that month had not been received by the Accountant General when his statement was prepared; and, 2ndly, by the revenue derived from sale of rukh produce having, as before explained, been shown in 1867-68 under *Land Revenue*. The great falling off in the *Salt* revenue is attributable to three causes—1st, to the fact that the income of the twelve months preceding 1867-68 was exceptionally high; 2ndly, to scarcity of carriage, on which the *Salt* revenue so much depends; and, 3rdly, to the excessive rain of last winter. From the two latter causes, the collections during December, January and February last, were less by 6 lakhs than those of the corresponding months in the previous year. The income under the head *Miscellaneous* is necessarily fluctuating. That of 1866-67 contained an exceptional item of more than half a lakh on account of money realized by sale of the Holta Tea Plantation.

153. *Disbursements*.—There has been an increase of expenditure under the following heads:—

Refunds, Rs.	48,164
Land Revenue,	72,870
Assessed Taxes,	7,791
Customs,	16,649
Salt,	3,330

Stamps,	Rs. 18,326
Allowances to village officers,	9,640
Law and Justice,	1,27,736
Police,	50,257
Marine,	8,690
Education,	23,719
Ecclesiastical,	849
Medical Services,	50,086
Miscellaneous,	1,31,076
Pensions,	10,243

Total, .. Rs. 5,79,426

Under *Refunds*, Rs. 22,200 of the increase is due to the License Tax. Of the increase under *Land Revenue*, Rs. 36,000 are due to salaries of Deputy and Assistant Commissioners, (of which Rs. 12,000 on account of salaries of Commissioners has been improperly charged to this head), Rs. 20,000 to the Settlement Department, and Rs. 19,000 to the Revenue Survey. Of the increase under *Customs and Salt*, Rs. 3,000 are due to increase of salaries of officers, and Rs. 14,000 to petty constructions and repairs, including the purchase of houses for Patrols. The increased expenditure under *Stamps* results from an increased income, which necessitates the payment of a larger amount of commission to vendors. Of the increase under *Law and Justice*, Rs. 30,000 are due to salaries of Deputy and Assistant Commissioners, (including Rs. 12,000 on account of Commissioners improperly charged under this head, as in the case of *Land Revenue*: these errors will be rectified hereafter), Rs. 25,000 to the expenses of the newly formed Registration Department; Rs. 35,000 to Jail charges, especially under the head of additions and repairs; Rs. 6,000 to enhanced salaries of Cantonment Magistrates on promotion; Rs. 7,000 to the salary of the Government Advocate (whose salary was charged in the previous year for some three months only); Rs. 13,000 to petty constructions and repairs. The increase of *Police* expenditure is chiefly due to Municipal police, the cost of which is met by a corresponding credit. The increase under *Education* is almost entirely due to increased grants-in-aid. The recent enhancement of the salaries of Medical officers generally, explains the increase under *Medical Services*. Under *Miscellaneous*, there is an exceptional item of over a lakh of rupees, being the amount paid to the representatives of the late Narain Dass, under a decree of the Privy Council.

154. The following heads of expenditure show a decrease :—

Interest on service funds,	Rs. 6,876
Forest charges,	32,934
Abkaree,	5,026
Public Departments,	15,950
Stationery and printing,	5,338
Political charges,	12,022
Allowances under Treaty, &c.,	39,171

Total,, 1,17,312

The decrease under *Forest* is nominal ; the charges for March 1868, (estimated at Rs. 44,000) not being included, as already explained. The decrease under *Public Departments* is nominal, Rs. 24,000 on account of salaries of Commissioners having, as before said, been erroneously charged in moieties to *Land Revenue* and *Law and Justice* ; so that there is in fact an increase of about Rs. 8,000 under this head, due partly to an increase of salary sanctioned for the Accountant General, and partly to the salary of the Honorable Mr. Strachey having for one month been charged to this province. The decrease of *Political* charges is owing to those of the previous year having been unduly swelled by the expenses of the Bokhara embassy. The decrease under *Allowances under Treaty*, &c., is the result of ordinary lapses.

155. *Local Funds*.—The following statement shows the receipts and disbursements from the principal Local Funds :—

Funds.	INCOME.		EXPENDITURE.	
	1866-67.	1867-68.	1866-67.	1867-68.
	11 months.	12 months.	11 months.	12 months.
Ferries, Imperial,	2,55,149	2,14,881	2,68,473	2,35,352
„ Minor,	4,57,526	4,10,778	3,09,278	4,49,544
Road Fund,	2,31,321	2,27,850	2,05,309	2,22,622
Educational Cess,	2,58,629	2,29,384	2,73,438	2,23,302
Local Agency,	1,43,989	1,16,925	80,990	1,16,886
Municipal,	10,97,499	13,22,324	11,71,558	14,68,273
Tulubana,	2,22,322	3,13,833	2,22,823	2,72,893
Staging Bungalow,	27,387	28,276	31,365	39,235

The steady increase in the income from Municipal funds is one among many proofs of the increasing wealth of the population.

B.—Public Works.

156. *STATISTICS*.—In Appendices III. B—1 to 4 will be found statistical statements furnishing the information prescribed in the returns framed by the Statistical Committee, as far as it is obtainable. Appendix III. B—1 corresponds with the Committee's return No. 1 ; the other three have been substituted for the Committee's return No. 2.

157. **MILITARY WORKS.**—The Military Works of the province still form the most important class of those now being carried out by the officers of the Public Works Department.

158. *Dehli.*—Some further progress has been made towards the completion of the glacis around the Palace at *Dehli*; the southern wall of the out-work of Selimgurh has been demolished, and the whole of the ground to the north of the Railway platforms is being filled up to their level; the foundations of a new bridge between Selimgurh and the Palace have been laid, and the superstructure is in progress; and three new batteries are being erected in the former.

159. Three new barracks, reported to be in progress last year, have been completed, with the exception of fixing the iron pipes. Out-offices for these barracks have also been erected. A fourth barrack has been commenced, and carried up to the first floor. Upper storeys have been added to the Artillery barracks, and to the married men's quarters. The hospital quarter-guard and cells, with other minor works, have been commenced.

160. The Normandy Condenser, the trial of which was reported last year, has not been considered on the whole successful in supplying water of unexceptionable quality. The cost of working also was great, and its use has been discontinued. Canal water, filtered, will be used.

161. *Ambala.*—The re-roofing and remodelling of the barracks at *Ambala* is still in progress. Two Cavalry barracks have been completed during the year; two more Cavalry barracks and one Artillery barrack are well advanced. The whole of this work is now about three-fourths completed, and it is expected that all will be finished by the close of the current official year.

Four blocks of married quarters have been completed in the European Infantry, and two in the Artillery lines; two blocks are nearly complete in the Cavalry lines. There are four more blocks in progress in the Infantry, four in the Cavalry, and two in the Artillery lines, and it is expected that the whole of these will be completed during the current official year.

162. Armourers' shops, slaughter-yards, wash-houses and ablution rooms have either been completed or are well advanced.

163. Wells Nos. 1 2, and 3, in the bed of the Kangra river, have been sunk to the same depth as No. 4, in which the supply of water has never failed. Persian wheel gear is being fitted to these wells.

In connection with the question of water-supply for *Ambala*, report was called for on the Mornee lakes, in the hills, about twenty miles from *Ambala*, as a source of supply. Some small dams were built before last rains, that the whole quantity of water might be properly measured. This has been done, and report on the project is being prepared.

164. *Dugshai.*—The three blocks of quarters for 22 families at *Dugshai* reported to have been well advanced last year, are now near completion. Out-offices for these barracks are also being constructed, and will soon be finished.

A slaughter-house and cattle-yard have also been commenced; the cattle-yard and sheep-shed are nearly completed, and the slaughter-house is in progress.

165. *Sabathu*.—The works at *Sabathu* have been to a certain extent suspended during the year, while the question of sites for the several new buildings has been under consideration. Suitable building space is limited, and the arrangement of the buildings has been a matter of some difficulty. The block of quarters for 20 families, which was well advanced last year, has been completed. The site for a second block for 32 families is now ready; estimate for the building has been submitted, and the work will at once be put in hand. Other minor buildings have been erected.

166. *Kussowlie*.—At *Kussowlie*, the superstructure of the lower storey of one of the new barracks is about half done, and the foundation of a second barrack is about half laid. Other minor works have been carried out during the year.

167. *Jalandhur*.—The six half-company barracks in the European Infantry lines at *Jalandhur*, which were reported to have been commenced last year, have been well advanced. The superstructures of the lower storeys of five of these barracks have been completed, the upper storey of one has been raised 14 feet, and of two others 10 feet high. The superstructure of the sixth barrack is 8 feet high, and the main walls of one company barrack have been built to a height of 6 feet. A plunge-bath is also in progress, with other works of minor importance.

168. *Kangra*.—Additional quarters and verandah to married barrack in the Fort of *Kangra*, have been completed, with some trifling exceptions.

169. *Dalhousie*.—The preparation of sites for the barracks of the new Depot on the lower Balún plateau at *Dalhousie* is nearly completed. Four of the barracks are in progress; the most advanced have the walls built up to level of the doorway relieving arches. The works were stopped for four months in winter.

The hospital site on the upper plateau has been levelled.

Sites have been prepared for the buildings required for the Native Regiment at Bukloh, and materials for them are being collected. A large level parade ground has been formed.

170. *Govindgurh*.—The addition of an upper storey to the Artillery barrack in the Fort of *Govindgurh*, of which the lower storey was to be converted into married mens' quarters, has been discontinued, it having been agreed that the plan of the old building was objectionable; the building has been dismantled and cleared away. Quarters have been erected for the Barrack Sergeant, and additions have been made to the main guard-room.

171. *Lahore fort*.—The additions and alterations to the Dewan-i-Am barrack in the Fort of *Lahore* have been completed.

172. *Meean Meer*.—Improvements have been effected to some of the existing buildings at *Meean Meer*, and a few new buildings have been erected. A Sergeants' mess and library has been commenced in the European Infantry lines, and the building is more than half finished.

A large number of trees have been planted in the lines, and along the cantonment roads.

137. *Syalkot*.—A few works of minor importance have been carried out at *Syalkot*.

174. *Firozepore*.—At *Firozepore*, three barracks for the single men of the Royal Artillery have their lower storeys finished. The masonry of the two blocks of married quarters for the Artillery is nearly completed up to roof level. Of married quarters in the Infantry lines, three barracks are nearly completed, and the superstructures of six more are half finished. The plinth of one wing of the Infantry hospital is finished, and the foundation of the other wing about half done. The block of nine married quarters for the Artillery in the Arsenal is well advanced, and will be completed during the hot season.

The whole of the wash-houses in the Infantry lines have been completed.

A new barrack has been commenced for the Garrison Company of Artillery in the Arsenal; the lower storey is nearly up to full height. Sergeant Major's and Staff Sergeants' quarters were commenced in the Infantry lines; the former are finished, and the latter are well advanced.

A portion of the gun-shed at each gateway in the Arsenal is being converted into guard-room. Other minor buildings have been in progress during the year.

175. *Multan*.—The general project for the new Fort at *Multan* has now been approved by the Government of India, and a detailed plan of barracks has been prepared; a large amount of material has been collected.

Six half-company barracks for British Infantry in the cantonments are in progress; two nearly completed to the top of the lower storeys.

Water-courses have been constructed along the principal lines of road in the cantonment for watering the roads and trees, an arrangement much needed at *Multan*, where the rain-fall is very small. Plantations have also been extended in the cantonment.

176. *Dera Ismail Khan*.—The superstructure of the half-company barrack for the European Infantry Detachment in the Fort of *Akulgurh* has been raised to within 3 feet of the roof level; plastering and flooring of the lower rooms are in progress, and roof timber has been collected. A wash-house for the Detachment has been completed, with exception of the cess-pool, and the well for supply of water.

The lines for Native Infantry in the cantonment have been completed, and a quarter-guard has been built. A magazine has been erected for the Native Artillery.

177. *Dera Ghazi Khan*.—The lines for the two Regiments of Native Infantry at *Dera Ghazi Khan* have been completed.

178. *Rajanpore*.—Quarters have been erected for the European Officer Commanding the Detachment at *Rajanpore*, and a guard-room for the Detachment has been completed. Quarters for European officers have also been provided at the out-post at *Mangrota*.

179. *Rawalpindi*. A full-company barrack, and two half-company barracks, in part of the work for completing the accommodation for two regiments of European Infantry at Rawalpindi, are near completion. The foundation and plinth of a second full-company barrack have been completed.

Of the two barracks in the Fortified Magazine enclosure, the superstructure of one is up to a height of 10 feet, and of the other up to about 3 feet. A few other minor works have been carried out.

180. *Murree*.—For the additional accommodation required for the Convalescent Depot at *Murree*, the half-company barrack, for which a site was prepared last year, is being covered in.

The bath-rooms to married quarters have been completed, and a canteen has been commenced. Lightning conductors have been fixed to the Magazine, and are being put up on the barracks; three are completed.

In the buildings at Clifden for soldiers' families from Peshawar, 96 quarters have been completed. Also barracks for 50 single men: quarters for 4 officers; and canteen and quarter-guard. Library and reading-room school-room, and two separate hospitals for men, and for women and children, are in progress.

181. *Abbottabad*; *Sydnun Buoli*; *Campbellpore*.—A few works of minor importance have been carried out in *Abbottabad*, *Sydnun Buoli*, and *Campbellpore*.

182. *Peshawar*.—The masonry in the barracks forming No. 1 side of the new Fortified Enclosure at *Peshawar* is nearly complete up to roof level, and on the second side is complete throughout the lower storey, and to the level of the verandah roofs on the upper storey.

The whole of the works connected with the drainage of the jheel have been completed, and the jheel is now perfectly dry, except after rain-fall, when water lodges for a time. Planting at the jheel is also done, and the trees are being attended to.

Improvements have been necessary to some of the old barracks to afford accommodation for the present garrison. Seven barracks have been floored with bricks in the Right Infantry lines, and one in the Artillery lines; the work is in progress in the Left Infantry and Artillery lines. The walls of the married barracks in the Right Infantry lines have been raised, and the buildings re-roofed and properly ventilated. The main walls of No. 15 barrack in the Artillery lines have also been raised, and the building thoroughly repaired and fitted for court-martial and orderly-rooms, sergeants' mess, and workshops. No. 14 barrack, Left Infantry lines, has been repaired and re-roofed, to afford accommodation for school, sergeants' mess, canteen, and library.

Two barracks in the Left Infantry lines, left unfinished since work was suspended in 1857, have been completed and occupied.

A few out-offices and other auxiliary buildings have been provided.

183. *Naushera*.—Four out of the six blocks of married mens' quarters at *Naushera*, commenced last year, are completed, and made over to the Military Authorities; the remaining two are well advanced.

Boarded ceilings have been put up in the second wing of the hospital, and in four more barracks, with two different systems of ventilation.

The second double fives-courts has been completed.

184. *Kohat*.—The refuge for ladies and civil residents in the Fort of *Kohat* has been nearly finished.

185. *Bannu*.—The lower storeys of officers' quarters in the Fort of *Dalipurh* are completed.

The Native Infantry barracks and the walls of the horn-work sustained serious damage during the rains of the past year, which is being repaired. A new out-post has been commenced at *Buran near Bannu*.

186. CIVIL BUILDINGS. *Revenue*.—The new district kucherry at *Lahore*, commenced last year, is well advanced; the superstructure of the lower storey of the centre block of building is nearly finished: the left wing is drawing to completion, and about one-third of the work in the right wing has been done.

A combined tahsil and thana, with quarters for Tahsildar and Thanadar and office establishment, has been erected at *Montgomery*. A similar building has been completed at *Bannu*, and a tahsil has been erected at *Dera Ismail Khan*.

The aqueduct for the supply of sweet water to *Khewra* (Salt Mines), commenced last year, has been completed.

187. *Post Offices*.—The Post Office at *Dalhousie* is about half done. A new Post Office has been erected at *Dera Ismail Khan*. Out-offices for the Post Office at *Murree* are in progress.

188. *General*.—An enclosure wall has been built around the Institute compound at *Dehli*, and out-offices have been erected.

Separate quarters for female patients were made in the *Gurgaon* dispensary.

In the *Ambala* district, materials were collected for a new dispensary at *Rupar*.

A ward for lunatics was added to the dispensary at *Hoshiarpore*.

A new dispensary was nearly completed at *Palampore*, in the Kangra district.

The whole of the proposed extension of the dispensary accommodation at *Amritsar* has been completed, and an enclosure wall added.

The main portion of the new block of city buildings, *Amritsar*, is ready for roofing, and the trusses are being fixed; the central archway has been completed and opened for traffic. The two wings are almost ready for occupation.

The new approach to the city buildings from the Santoksar tank is about half finished.

Some of the old roofs of Government House, *Lahore*, have been renewed.

A portion of the Lunatic Asylum at *Lahore* has been converted into a quarantine ward.

The unfinished portion of the *Lahore Central Museum* was completed and fitted up.

Additions have been made to the dispensaries at Lahore, Firozpur, Jhelum, Pind Dadan Khan, Abbottabad, and Kohat. A new dispensary has been commenced at Wazirabad, three have been built in the Gujerat district, and one at Kolachi, Dera Ismail Khan district.

A museum and a poor-house were built at *Montgomery*.

Additions were being made to the *Syalkot* Leper Asylum, which was built early in the year.

189. *Ecclesiastical*.—A few alterations have been made in St. James' Church, *Dehli*.

An enclosure wall and gate have been built for the Roman Catholic Chapel at the same place.

A verandah is being added to the south side of St. Paul's Church at *Amritsar*, and is nearly finished; a new porch has been built, which is now being roofed in. A turret and spirelet have been added, and are nearly completed.

A wooden addition has been made to the part of the galleries in St. James' Church, *Anarkullee*, to give additional accommodation.

The improvements to the Monumental Church at *Firozpur* have been carried out, and the building has been completed.

A wall has been erected around the Church compound at *Dera Ismail Khan*.

190. *Educational*.—Improvements and additions have been made to a few district school houses.

A bungalow for passed students of the Lawrence Military Asylum at *Samauwar* has been completed, with necessary out-offices. The out-offices of the boys' hospital have been nearly completed. Three new cook-houses have been commenced, and a new range of 14 servants' houses.

The hospital for the Medical School, *Lahore*, has been commenced; the foundation is about one-third done. A large quantity of material has been collected. Some improvements have been made in the Principal's quarters in the present temporary Medical School building.

A new school was in progress at *Khemkarn*, in Lahore district.

191. *Judicial and Police*.—An enclosure wall has been built around the Jail at *Dehli*. Several buildings have been erected for City and Municipal police.

The Small Cause Court at *Ludiannah* has been finished, except white-washing and clearing the grounds.

The Small Cause Court at *Jalandhur* has been completed and handed over.

The similar building at *Hoshiarpore* is drawing near completion.

For the proposed new Jail at *Hoshiarpore*, some materials had been collected and wood-work prepared at *Jalandhur*. It has now been determined not to erect a Jail at *Hoshiarpore*.

New barracks are in course of erection for the Imperial and Municipal Police at *Amritsar*.

Sheds and workshops for Thugs are being erected near the *Lahore* Central Jail. The iron-gratings in the Jail are being strengthened. Twenty additional solitary cells have been built.

A Sheriff's store-room has been added to the Small Cause Court, *Lahore*.

A Police office was completed at *Kasur*, in the *Lahore* district.

A new Jail for 500 prisoners has been commenced at *Montgomery*; the foundations and plinths of five wards have been completed, and the superstructure of one ward is up to a height of 8 feet.

The renewal of the roofs of the Jail barracks at *Multan* has been completed.

A new Jail for 300 prisoners is in progress at *Deru Ghazi Khan*. The outer enclosure wall is completed. Barrack for guard has been roofed; the masonry of the outer and inner circle walls is in progress; the masonry of four work-sheds has been commenced, and wells have been sunk.

At *Syalkot*, quarters for zaildars and other head-men of the district, who are often required to attend public meetings, and who had no suitable place of accommodation, were provided in the old Fort, part of the cost being defrayed by the persons themselves.

A circuit-house and out-offices were constructed for Civil and Police officers at *Tangrot*, on the road from *Jhilam* to *Kohat*.

The new Police thana at *Nura*, in the *Hazara* district, has been completed,

Improvements are being effected in the Jail buildings at *Peshawar*.

A sessions or circuit-house is being erected at *Kohat*; the work is approaching completion. A Police rest-house has been built at *Gandiaur*, in the *Hungoo* valley, and a Police thana at *Rukha Tulao*, near *Shadipore*, in the *Kohat* district.

192. AGRICULTURAL. *Bari Doab Canal, 1st Division*.—Materials for the remodelling project were manufactured and collected on the several sites on which they are to be used.

The little work remaining on the *Faridnagar* rajbuihas was completed early in the year, and water was admitted by the end of April 1867, early enough to admit of irrigation to the autumn crop.

The *Shahpore* water-course for supplying motive power to the workshops at *Madhopore* is being executed in this Division. A revised estimate was sanctioned, and work was vigorously commenced at the close of the year. It is expected the work will be completed by 1st August, 1868.

193. 2nd Division.—Some expenditure was incurred in finishing off the *Shalimar* rajbuiha, which was reported completed last year. The *Nussir*

feeder was in progress during the year; but the work was retarded in consequence of a failure in the brick return. The *Runiwala* rajbaha was well in hand, and would have been completed by the end of the year but for heavy rain, which kept back the work considerably; very little, however, requires to be done to it.

A set of flour mills at *Dhing Nangul* was completed, and working by the end of the year.

194. *4th Division*.—Materials were being manufactured and collected for the remodelling project; but work was stopped pending final orders of Government on the project. About 15 lakhs of bricks have been landed at the several sites, and some stone lime.

195. *Kanowan Swamp*.—The main drain was worked back from the *Tibbi* and *Naushera* ghat road towards *Talpura* and *Lahri*. A cut, 3000 feet in length, was also made from another part of the swamp to meet the main drain, and has been working satisfactorily. Owing to the non-completion of the lower portion of the drain, the upper parts have silted and become choked with weeds. Notwithstanding this, a very considerable area of land has been reclaimed, a portion of which has already yielded three autumn crops.

196. *Katora Canal*.—The excavation of the entire channel, about 24 miles in length, was completed during the year. Two chowkees have also been finished, and materials have been collected for a bridge at *Ganda Singh*, where the Lahore and Ferozpur road crosses the canal. The surplus channel has not yet been commenced on, as it is not certain whether there will be sufficient water to spare.

197. On the *Upper Sohag Canal*, a straight cut, 1600 feet in length, was completed during the year; it connects two portions between which the channel was very tortuous, the length of the portion cut off being about 5000 feet. The bed of this canal has been staked across at the level of the bed at intervals of 1000 feet along three-fourths of its entire length.

The object of this is to obviate the necessity for levelling over the whole length whenever silt clearance is necessary.

198. The bed of the *Khanwah* canal has also been staked in the same manner for a length of 36 miles.

Nineteen large and twenty-nine small masonry outlets have been built on the *Khanwah*, and twenty-three large and eleven small on the *Upper Sohag Canal*. These are paid for entirely by the cultivators.

199. *Lower Sutlej Canals*.—A new head, 4 miles in length, for the *Khadul*, and another, one mile in length, for the *Dhundi* canal, were completed during the year.

The *Mattithal* canal was extended for about $4\frac{1}{2}$ miles, and considerably improved.

Of three bridges on the *Kuhror* and *Duniapur* road, two were completed last year; the foundations of the third have been put down.

Of five bridges on the *Shujabad* and *Kuluwala* road, one is completed, with exception of the approaches and metalling. Materials are in course of preparation for the others.

200. *Indus Canals*.—The *Hajipur* bridge, over the *Dhundi* canal, was commenced in September. The foundations and superstructure are finished up to springing of arch; the work was greatly hindered owing to the difficulty of getting laborers for the work. The heavy rain in the cold season retarded the preparation of bricks, &c.

The aqueduct over the *Sahiba* canal was completed early in the year.

201. *Western Jumma Canal—Northern Division*.—A channel for diverting the water of the *Pandhoi* nullah into the *Rakshi*, so as to prevent its passing into the canal, was in progress during the year. The channel is 10,000 feet in length, with a bottom width of 20 feet, and side slopes of one to one. The total quantity of excavation is 23,96,395 cubic feet, of which 19,44,407 cubic feet were finished during the year. The excavation was commenced in January 1867, and would have been completed but for the heavy winter rains, which appear to have been general; it will be ready, however, for use before the rainy season. A small bridge of 20 feet span is being built to carry the *Jagadri* and *Bilaspur* road over the channel. The foundations are masonry blocks undersunk to a depth of 7 feet below the bed of the channel. The work is about half finished.

202. *Rohtak Division*.—The estimate for an Escape from *Rer* to the *Jumma* was sanctioned during the year; but as some of the details had to be modified, work was not commenced until the close of the year. The excavation has been started, and materials for the masonry work are in course of preparation.

203. *Dehli Division*.—The *Kandrah* drainage project was commenced late in the year. The channel is nearly excavated as far as the main outfall at *Hassangurh*, and it is expected that the remainder will be executed before the commencement of the rains.

A new bridge over the *Bowana* Escape is nearly finished; the work was much interrupted owing to the high supply maintained in the Escape, consequently little progress could be made.

The abutments of the *Badana* bridge have been raised two feet to allow of the passage of rafts.

204. *Hansi Division*.—There were no original works in progress during the year. Surveys for the construction of rajbhas were carried on in the *Jhind* territory and in the upper part of the *Hansi* district.

205. *Dehli and Gurgaon Irrigation Works*.—An outlet to the *Gwalpahari* bund was completed. An Escape channel for the same was commenced in March, and is well in hand.

206. *Madhopre Workshops*.—The left wing of the office west range is in an advanced state. One room in the upper storey is occupied by the office, and the remainder is being roofed. The right wing is finished to the upper floor, and the upper storey walls commenced on one side.

The well for the large turbine is ready for the reception of the machinery, which will be erected as soon as the tunnel from the bottom of well to

canal is ready. The tunnel is progressing from both ends; the entire length is 300 feet, of which 100 feet at the end next the well has been excavated and lined with masonry. On the canal end, about 80 feet have been excavated, and the lining is finished up to a length of 20 feet.

The well for the small turbine for the foundry is also finished, as well as the tunnel from the bottom of well to the tail race. The tail race is also finished, with the exception of a little slope-dressing.

The foundations of Foundry F. are all in, and the superstructure up to an average height of 12 feet. The vault for the drop bottom to the new cupola is also made, and nearly arched in.

The foundations of Foundry C. are in, and the superstructure up to a height of $2\frac{1}{2}$ feet.

The foundations of the smiths' shops are in, and the superstructure is up to a height of 6 feet.

The outer walls of the turning room are $2\frac{1}{2}$ feet above ground, and the pits for the main shafting nearly ready. The foundation of the inner walls have been brought up to full height.

The general progress is not so rapid as could be wished; the delay is mainly owing to the want of bricks. The kilns suffered severely from the heavy rains, and the out-turn of bricks was very small. Arrangements have been made for ensuring a larger and more constant supply in future.

The following machinery arrived during the year :—

- 1 Reaction water wheel,
- 1 Screw-cutting machine.
- 1 Set hand-screwing apparatus.
- 1 Self-acting vertical drilling and boring machine.
- 1 Self-acting lathe.
- 1 Plate-bending machine.
- 1 Shaping machine.
- 1 Slotting machine.
- 1 Double tool apparatus for slotting machine.

207. *Repairs.—Bari Doab Canal, 1st Division.*—The repairs in this Division were very heavy, owing to the prevalence of floods at the most unexpected seasons. A very heavy flood came down on the 14th May, which damaged the head bund, destroyed the bund at the dam, and silted the canal head. Towards the end of the same month a small flood came down which did less damage. In July again, the bunds were carried away, and, while under repair, another flood came down and swept away the new work. In August, repairs were continued during the whole month; seven floods occurred, the highest being that of the 25th, when the river rose three feet above the floors of the rooms on both sides of the dam. The head was so silted that the canal had to be closed and the deposit removed. Serious damage was sustained by the various masonry works, *Kaler* bridge being the worst case. In September, on account of the unhealthiness of the season, it was found necessary to raise the pay of the laborers from $2\frac{1}{2}$ to 4 annas each;—all these causes combined to raise the cost of the yearly repairs. Repairs to the Madhopore dam have also been very expensive. On an average, since January, floods have come down once every ten days. These have silted the head, washed out much of the new work in the dam, and raised the working rates.

In the 2nd Sub-division, the bed and banks are in fair order, and are not likely to want much repair during the next year.

The hill torrent works were, as usual, damaged by the floods from the *Chakki*. An attempt has been made to divert the flood waters from the weakest points, and it is hoped that this work will be a success.

208. *2nd Division*.—The usual repairs to bed, banks, and masonry works of the main canal, were effected. The minor channels or *rajbuhas* were cleared from silt, and the bed and banks kept in thorough repair.

209. *4th Division*.—The expenditure on repairs is still high in this Division. The banks and bed of the main canal have required considerable repairs, but are now in thorough order. The minor channels have been cleared of silt, and bed and banks kept water-tight. The expenditure on these two items continues to be heavy. The cost of repairing buildings and masonry works has been moderate.

210. *Khanwah Canal*.—About 15 miles of the main channel were cleared from silt; the banks were repaired and cleared of jungle, and slight repairs executed to the buildings and masonry works; 35 miles of *rajbuhas* were cleared of silt, and the banks kept in repair and freed from jungle.

211. *Upper Sohag Canal*.—Seven miles of the main canal were cleared of silt, and 12 miles of *rajbuhas*; the banks of both main and minor channels were repaired and cleared of jungle, and the buildings and masonry works kept in order.

212. *Lower Sohag nullah*.—This channel was also cleared out during the year in the hope of affording irrigation to land along its banks.

213. *Katora Canal*.—Slight repairs to banks and buildings were executed.

214. *Lower Sutlej and Chenab Canals*.—About 5½ miles of the *Durana Langana Canal* was cleared of silt, from Imperial funds. One mile of the *Mattithal*, and half mile of the *Gajuhatta*, were cleared of silt, the cost being defrayed from the *zurnagha* fund; the rest of the canals were cleared out by statute labor.

A small establishment was maintained during the rainy months to watch the *Chenab* embankment, destroy vermin burrowing into the bund, and fill up their holes, &c.

215. *Indus Canals*.—The banks of the following canals were levelled and reduced to the standard height of 5 feet above the ground :—

Manka Canal	8,000 feet.
Shoria Canal	41,000 "
Dhangana Canal	55,000 "
Bunuha Branch of the Sahiba Canal	10,000 "

About 37,600 running feet of breaches, in the banks of the *Manka* canal, caused by hill floods, were repaired, and 8,200 feet of banks of the *Dhundi* Canal, which had been injured by the *Shah Jamal* inundation in the previous year, were put into thorough order before the rains set in. Petty repairs to banks of sundry other canals were also executed.

The *Nur* canal regulator, which was considerably injured by the last flood, was repaired.

The annual clearance of the canals was approaching completion at the close of the year. Most of the smaller canals were thoroughly cleared, and but little work remained on the larger.

An addition of 6,400 feet was made to the tail end of the *Shah Jamal* bund, and the old portion repaired. Petty repairs were executed to the *Kuluwali*, city, and cantonment bunds, and a small establishment maintained for watching the Great Inundation, *Shah Jamal*, and *Kaim-ki-Basti* embankments.

216. *Western Jumna Canal. Head works and bunds.*—The *Tajawala* bund was raised and strengthened before the rains set in to enable it to force a larger supply into the canal. The quantity of water being greater than full supply, the Jumna and second head bunds were broken on the 7th June 1867, and the water in the canal reduced; the remaining portions were carried away by the floods.

A bund at *Bhalpore*, 520 feet in length, constructed of gabions filled with stones, was placed across the old channel to prevent the water cutting away the right bank.

The works on the *Sombe* river were put into thorough repair.

At *Chuharpur*, a cut, 340 feet in length, and a bund, 7,160 feet long, were made to turn the water into the canal. The flood of 29th August carried away the principal bund, filled up the canal, and drove all the water into the escape channel, leaving none in the canal. The above works were necessary to bring back the supply; they were commenced on the 7th September, and completed by the end of November.

Channels for silting up jheels were made at *Mangulpur*, *Tapprana*, *Kamalpur*, *Singwah*, and *Solanpur*.

217. *Rohtuck Division.*—The expenditure on repairs in this Division is small in comparison with previous years. Extensive silt clearances were provided for, but were found not to be necessary. The banks were repaired and cleared of jungle, and masonry works and buildings were put into efficient repair.

The bed and banks of the *Kabri*, *Kachraoli* and *Wasar* rajbuhals, were repaired, and the banks raised wherever necessary. Silt was cleared from the *Gagsina*, *Sitaudi*, *Kachraoli*, *Mahomedpore*, *Kabri*, *Wysar*, *Gangesar*, and *Kamu* rajbuhals. Heads were also built to some of the minor water-courses, which were also cleared from silt, and had their banks repaired.

218. *Delhi Division.*—The banks of the canal were maintained in good order, and cleared of jungle. Two large breaches occurred at *Chota Khera* and *Gangataoli*. That at *Chota Khera* occurred on the 22nd July, during heavy rain, when a large body of drainage water was passing down the canal. The breach at *Gangataoli* occurred on the 13th August, at the site of a former break, and was only finally closed on the 8th September, the water being meantime passed down the *Bowana Escape*. The usual repairs to buildings and masonry works were executed. The channel, both inside and outside of *Delhi*, was cleared of silt; also from the tail to

Shokupur. Deposits at bends in sundry places along the canal were also removed.

The *Chota Thana* cut was cleared out to a depth of 2 feet; and the *Chota Khera* cut to an average depth of $1\frac{1}{2}$ feet, for a length of 8100 feet.

Two old flour-mills at *Dehli*, which had been altered for rice-husking machines, have been restored, and were rented during the year.

The mill-room and godown at *Anguri*, which fell in during the rains of 1865-66, were repaired, and are now in working order.

The banks and roadways of *Soneput*, *Khanpur*, *Selana*, *Lakku*, *Bowana*, and *Kassendi* rajbhuas, and *Ghoona* water-courses, were repaired and cleared of jungle. Minor water-courses, above $2\frac{1}{2}$ miles in length, were cleared of silt, and their banks kept in order. Silt clearance was also effected in the *Takri*, *Mogulpur* and *Keraoli* rajbhuas.

219. *Hansi Division.*—The canal bridges have been repaired wherever necessary. The repairs were slight, and the cost trifling. The chowkees have also been kept in efficient repair.

The bed and banks have been repaired, and the latter cleared of jungle; the right or driving bank has also been rolled. The banks between *Narnaund* and *Hissar*, about 20 miles, which were very low, have been raised. Silt heaps, which had collected in several places, and interfered with the free flow of water, were removed.

Silt has been removed from 35 rajbhuas and water-courses, and their banks repaired, and jungle cleared from 15; the masonry heads to these water-courses have also been repaired wherever necessary.

220. *Dehli and Gurgaon Irrigation Works.*—The *Kotillah* and *Chandani* embankments were repaired after the rains, as well as the banks of the *Najafgurh* jheel and *Chandani* drains.

A waste weir, 100 feet in length, to the *Dakina* bund, was completed.

The other bunds were repaired and holes filled, &c.

221. *Arboriculture, &c.*—Avenues and groves were constructed along the roads in *Karnal* district, leading to *Ambala*, *Indri*, *Meerut*, and *Kythal*. Experimental sowings of keekur seed, to form hedge-rows along sides of roads in this and other districts, were partially successful.

The plantations in alluvial land on the *Sullej*, in *Jalandhur* district, were continued. There are now 39 plots, covering 457 acres, planted, and the trees appear flourishing, but ultimate success is not yet quite certain.

Tanks were made at 9 places in the hilly tracts in the *Hoshiarpore* district, partly by means of grants-in-aid to the villagers.

Tanks and store-houses were constructed in *Syalkot* district, for extending flax operations.

An extensive nursery of trees, with a tank in the midst, was being constructed near the dispensary at *Hurripur*, in *Hazara*.

Masonry water-courses were made from hill streams to the *Bazadi* and *Merozai* villages, in *Kohat* district, half the cost being defrayed by the villagers.

A masonry well was constructed at *Borikheyl*, in Bannu district, for irrigation in the *Kachi* tract; water was found at 140 feet from the surface of ground.

A well at *Pachad Gurchani*, for the *Gurchani* villages, situate in a barren and waterless tract, in the Dera Ghazi Khan district, was nearly complete.

The usual operations were carried on for extending arboriculture along district roads and at encamping grounds in the *Dehli*, *Gurgaon*, *Hissar*, *Sirsa*, *Ambala*, *Ludiannah*, *Kangra*, *Amritsar*, *Syalkot*, *Ferozpur*, *Gujranwala*, *Multan*, *Jhung*, *Gujarat*, *Jhelum*, *Shakpore*, and *Dera Ghazi Khan* districts. About 15½ lakhs of trees were planted out. In the *Jhelum* district, an avenue of trees is being planted along each face of the encamping grounds.

222. COMMUNICATIONS.—*Metalled Roads*.—Of the Grand Trunk Road from *Dehli* to *Ambala* (120 miles), about 47 miles have received a new coat of metal, and a large quantity of metal has been collected for further repairs. The slopes of embankment and surface of metal have also undergone repairs along the entire line.

The whole of the earthen embankment of the road from *Ambala* to *Jagndri* has been completed; a layer of metal has been consolidated over a distance of 7 miles, and sufficient kunkur for 20 miles more has been collected. All the new wooden bridges have been completed, and the old ones widened; the foundations of the masonry bridge over the Western Jumna Canal have been finished; two road bungalows have been built.

The metalled road from *Ambala* to *Kalka* has been maintained in good order throughout the year.

223. In the next Division of the Trunk Road, from *Ambala* to *Lahore* (190 miles), about 49½ miles have received a new coat of metal, and necessary repairs have been effected along the whole line.

Owing to the great outlay necessarily incurred in maintaining a metalled road of 16 feet wide, the width of metal along the Trunk Road is being gradually reduced to 12 feet, except in the vicinity of the large stations.

Metalled crossings have been maintained on the beds of the unbridged rivers in this Division.

The Trunk Road from *Ludiannah* to *Ferozpur* and *Lahore* has been maintained during the year in good order.

224. The small amount of work remaining last year to complete the metalling of the road from *Lahore* to *Jhelum* has now been done, and the road is metalled throughout the entire distance of 100 miles.

Three of the metalled gaps left in the road embankment for the free passage of the cross drainage, have been enlarged, in addition to those completed last year. And four new gaps have been formed and metalled. About 39 miles of the road have received a new layer of metal; extensive repairs to the rest of the road surface have been carried out; and a large amount of metal has been collected.

The metalled crossings on the beds of unbridged rivers have been maintained. A large amount of tree seed has been sown in the road-side nurseries.

The branch road from *Gujeranwala* to *Syalkot* has been raised, and will be completed as a metalled road.

225. In the next Division of the Grand Trunk Road, from *Jhelum* to *Rawal Pindi* (67 miles), about 35 miles have received a fresh coat of metal, and a large amount of metal has been collected; necessary repairs have been made on the other portions of the road; the west approach to the *Sohan* river has been completed, and railings have been put up at all parts of the high embankments that had not before been provided with them.

226. The last Division of the Road, from *Rawal Pindi* to *Peshawar* (98 miles), has been maintained in good order. The work on the drift tunnel, under the *Indus* at *Attock*, has been continued during the year, and at its close was approaching completion. (The galleries from either side have since been joined, and the passage under the river is open). A large quantity of water enters the tunnel. It is continually pumped, and measures will be taken to keep the passage clear.

227. *Unmetalled Roads*.—On the road from *Kalka* to *Simla*, 47 miles of cutting have been completed, of which $32\frac{1}{2}$ miles are fully completed, with their masonry works, &c.

The *Kotha* and *Terai* bridges, of 25 feet span each, have been finished; two 8 feet drains have been constructed. Four masonry bridges are now in hand, and two with iron girder roadways.

The whole of the cutting will be finished next year. The work on the *Tara Devi* cliffs has been much retarded, owing to the necessity for keeping the temporary road open to traffic.

228. On the *Hindustan* and *Tibet* Road, about 2 miles of road across the *Koshung* cliffs were opened with solid roadways. The small galleries, left unfinished in the previous year, have all been completed.

229. The whole of the earthwork of the road from *Nurpur* to *Bunderghat*, a distance of $30\frac{1}{2}$ miles, has been completed, except about 1500 feet near the proposed *Guj* bridge, the formation level of which has not yet been fixed, and a considerable number of drains and culverts, 6 to 16 feet span, have been constructed. Two minor bridges, the *Triloknath* nullah and the *Bhali*, are in progress; the former well advanced.

Of the continuation of the road from *Bunderghat* to *Bajinath*, a distance of about $35\frac{1}{2}$ miles, the earthwork of 27 miles is nearly completed; the remaining 8 miles of road, *Rajpura* to *Bajinath*, has not yet been commenced. Through the *Negrola* morass, a portion of road, three-fourths of a mile in length, founded on fascines, has been successfully completed. Of minor bridges, 12 to 30 feet span, ten have been built during the year, all of masonry except one, a skew timber bridge. Four of the masonry bridges are skew, one, 25 feet span, built in ribs. In this section also a large number of masonry drains, culverts, and irrigation syphons, have been constructed; and a masonry aqueduct, 22 feet in length, with a span

of 18 feet, has been erected to carry the *Bunér* canal over the road. A second aqueduct has been commenced, and is about one-fourth complete, for carrying the *Nigul* canal over the road.

The improvement of the road from *Palampore* to *Bajinath*, a distance of 9 miles, to fit it for camel traffic, is well advanced; temporary bridges have been constructed over the small nullahs.

The heavy piece of road work on the line of the *Hoshiarpore* and *Dharmasala* road, forming the approach to the *Kangra* bridge, is nearly completed.

230. The road from *Pathankot* to *Dalhousie* has been repaired, cleared of land-slips, and drained, and has had railings fixed in dangerous places.

A new road is being lined out to be a cart road to *Dalhousie* by the *Balun* plateau, at an elevation that will render it practicable at all seasons of the year as far as *Balun*.

231. The road from *Amritsur* to *Syalkot* is to be raised and improved. The embankment from *Amritsur* to *Ajnala*, 16th mile, is finished, completing about one-fourth of the earthwork.

232. The whole of the earthwork on the road from *Lahore* to *Shekopura* has been completed, and dressed. Five masonry drain bridges and four metalled gaps have been constructed; the foundations of abutment of timber bridges are well advanced, and the wood-work of piers and trusses is being prepared.

The continuation of this road to the left bank of the *Chenab* is in progress. It has been raised and dressed, and materials for bridges and gaps have been collected.

233. The road from *Rawal Pindi* to *Murree* has been maintained in good order; the metalling of portions of the road between *Rawal Pindi* and *Barakao* in the plains has been completed. Parapet walls are being erected in dangerous parts below *Trét*, and the work is about three-fourths done. The renewal of several of the bridges has been effected, and others are in progress.

234. Some further progress has been made in the *Haripur* and *Darband* road; about $1\frac{1}{2}$ miles remain to complete.

The road connecting the *Abbottabad* and *Murree* road with the road to *Kashmir*, has been widened and improved.

The widening and improving of the *Abbottabad* and *Murree* Road by the European soldier working parties has been separately reported on. The entire length of road in the hills upon which Europeans could be employed is 32 miles. Of these, $21\frac{1}{2}$ miles have been completed, and about one mile more is half done, leaving $9\frac{1}{2}$ miles still to be done.

235. A patrolling road from *Mohumedzai* post to *Fort Garnett*, at the mouth of the *Kohat* Pass, is being constructed, and the work is about three-fourths done.

Some improvements have been effected to the *Kohat* and *Kushalpurh* road, and portions of it, in heavy sandy places, have been metalled.

Further progress has been made in the tunnel at *Bahadur Kheyl*, on the road from *Kohat* to *Bannu*. The work is drawing to completion.

236. *District Roads*.—Some progress was made towards completing the new road from *Noh* to *Firozpur* in Gurgaon district.

237. A few miles of the road from *Hansi* to *Bhewani* and *Dehli* to *Sirsa*, were metalled, in Hissar district, and a portion of the road between *Futteabad* and *Gehlakhya* was altered. Two bridges were constructed at *Dharsul* and *Channu* on the *Rungoe* nullah, for the convenience chiefly of the agriculturists.

238. A new road was opened out from *Sirsa* to *Futteabad*; and the road from *Sirsa* to *Fazilke* via *Abdhar* was widened, to keep light and heavy traffic separate. Progress was made in metalling part of the main *Dehli* and *Sirsa* road; and a new metalled road, and bridge thereon, were constructed from *Fazilke* to the *Mouzzum* ferry on the *Sutlej*.

239. Unmetalled roads were completed in Karnal district, from *Paniput* to *Nugloghat* on the *Jumna*, from *Pundri* to *Futtehpur*, and from *Kachwa* to *Bahlalpur*. A road was in progress from *Deobund* to *Rajound* for communication between the police station of *Rajound* and *Kythul*. A masonry bridge over the *Puran* nullah, at *Mogalmajra*, on the road to *Saharunpur*, was nearly complete, and nine bridges were constructed on the roads to *Hansi* and *Indri*.

240. The metalling of the *Ludiannah* and *Kalka* road, as far as to the *Samrala* tahsil, was nearly finished; 22 miles are now complete. Half of the work in the *Ludiannah* district of the *Dehlon* road leading to the Native States of *Kotla*, *Nabha*, and *Patiala*, was completed; this is expected to be a road of considerable traffic when the railway is opened. A new metalled road has been made at the *Ludiannah* encamping ground, connecting the road to *Firozapore* with the Trunk Road to *Jalandhur*, to save traffic from crossing the railway line twice in the same locality.

241. Three bridges were built on the road from *Jalandhur* town to *Tanda* and *Dusuah* in Hoshiarpore district, and materials were collected for further improvement of the road.

242. The roads from *Mirthal* to *Tanda*, and *Naoshera* to *Mokerian*, in Hoshiarpore district, were raised; and bridges and culverts were made on several district roads.

243. In Kangra district, improvements were made to about 45 miles of the *Kullu* and *Lahoul* road, boulders that obstructed the road were cleared, and new lines laid out to avoid abrupt ascents and descents. The work on the more elevated parts over the *Bara Lacha Pass*, which is free from snow for little more than two months of the year, was finished. In connection with this work, a good mule road was made from the *Babbu Pass* to *Sultanpur*, in continuation of the road from *Bajinath* through *Mandi*; and two rest-houses were constructed along it. A considerable outlay was incurred in making a cart-road from the barracks to the police office at *Dharmasala*.

244. Two small district roads were improved in the Gurdaspur district.

245. Thirteen unmetalled railway feeders from towns and villages in the Montgomery district were completed.

246. In the Multan district, the *Ghota Sharifa* road was completed; and the bridging of roads from *Basti Maluk* to *Mian-ki-pakki*, and from *Serai Siddu* to *Shorkot* (in *Jhung*), was about half finished.

247. The improvements of the important road from *Multan* to *Dera Ghazi Khan* progressed under the *Mozaffargurh* district authorities. Several sand-hills were cut through and the sand was removed; the road, where liable to inundation, was raised, and culverts were made, and the grassing of portions was renewed and extended. The road is now nearly level throughout, and practicable for wheeled conveyances. Several small bridges were made on the road from *Mozaffargurh* to *Dera Ismail Khan*, which is much used by the *Khorasani* merchants, and on the road from *Alipur* to *Shahr Sultan*.

248. Bridges and syphon drains on the road from *Dera Ghazi Khan* to *Mithankot* were completed; and also bridges over the *Manka*, *Shoria*, and *Sikandra* canals, on the road from *Dera Ghazi Khan* to *Yaru* out-post, and over the *Kasturi* and *Sahiba* canals on the road to the *Sheru* out-post.

249. The raising and bridging of the road from *Jhung* towards *Wazirabad* was continued, and the work is now nearly complete. The road from *Shorkot* to *Serai Siddu* was raised considerably; and a bridge was constructed on the road from *Maghiana* to the *Chenab*.

250. The roads in *Syalkot* district leading to *Wazirabad* and *Lahore*, and the old road to *Gurdaspur*, were partially raised and bridged, and small improvements of other roads in the district were effected, metalled gaps being used instead of bridges where expedient.

251. New roads were constructed in the *Salt Range* and in other parts of the *Shahpore* district for police purposes and for general traffic; and the direction of the road from *Khund* to *Katwai*, one of the roads formerly made in the *Salt Range*, was partially altered, to shorten the distance, while at the same time improving the gradient.

252. In the *Rawal Pindi* district a road, 21 miles long, was constructed from *Kahuta* to the *Lachman* ferry on the *Jhelum*.

The road from *Jhelum* to *Dewal*, along the right bank of the river, was continued in this district, and 40 miles were nearly completed.

253. The communication from *Jund* in *Rawal Pindi* district to *Musa Kheyl* in *Bannu* district, via *Kotri*, *Pachmand* and the *Nimmal Pass*, was nearly completed in the *Jhelum* and *Bannu* districts, to provide direct communication between *Rawal Pindi* and *Mianwali*, and to facilitate traffic between *Peshawar* and *Multan*.

254. In the *Bannu* district, new village cross roads were constructed; and bridges were built over the *Narri* and *Shibdeo* nullahs crossing the *Hawaid* frontier road, and at other places.

255. The under roadway of the railway girder bridge over the *Jumna* at *Dehli* being open for general traffic, the *Dehli* boat bridge has been abolished.

256. *Bridges*.—The parapets of the *Markanda* bridge were finished during the year, completing the main structure. The new apron and curtain wall have been completed.

The slope of the approaches to the *Gaggar* bridge on the Trunk Road north of *Ambala*, which was completed last year, has been reduced to a more moderate incline.

The west *Beyn* river between *Jalandhur* and the *Bias* is at present crossed by a bridge of boats maintained by the Rajah of Kapurthala, but which is ill suited for the passage of traffic along the Grand Trunk Road. A permanent masonry bridge has been commenced.

On the line of the new *Kangra* valley road from *Nurpur* to *Bainnath*, the large bridge over the *Dehri* nullah, between *Nurpur* and *Bunderghat*, has been commenced. The concrete foundations have been laid. This was a difficult work, owing to the large influx of water, and occupied 2½ months of constant labor.

The left abutment and wing-walls of the bridge over the *Bunér*, between *Bunderghat* and *Bainnath*, are up to the springing of the arch.

The bridge over the *Nigul*, a single span of 140 feet, with a rise of 28 feet, has been almost completed. The work was commenced in January 1867.

The bridge over the *Bagh Butcha* nullah, between *Lahore* and *Gujeranwala*, is completed.

The bridge over the *Bhimber*, near *Gujerat*, was near completion at the close of the year; a small amount of masonry still remaining to be done.

A bridge (the cost defrayed from local funds) is being built over the *Bagh Butcha*, on the road from *Gujeranwala* to *Amritsar*.

The masonry bridge over the *Dina* nullah, between *Jhelum* and *Rawal Pindi* about 11 miles from *Jhelum*, has been completed, with temporary parapets.

The foundations of the large masonry bridge over the *Sohan* river, near *Rawal Pindi*, are almost completed; the superstructure of one abutment and ten piers is finished. The other abutment and four piers are in progress; five of the fifteen arches, 63 feet span, have been finished.

The bridge over the *Loh* nullah, where it flows into the *Sohan*, (adjoining the *Sohan* bridge) has just been commenced.

A bridge is being constructed over the *Loh* nullah, on the road from the cantonment to the city of *Rawal Pindi*, the cost of which will be defrayed from local funds. The work is about three-fourths done.

Four new bridges have been constructed on the *Hazara* Trunk Road.

Drop wall and flooring are being given to the *Tut-ki-Garhi* bridge, in the Kohat Division, and the work is about three-fourths done. Drain bridges are being erected on the *Bannu* and *Dera Ismail Khan* Road.

257. *Boat Bridges and Ferries*.—New superstructure was made for the boat-bridge at *Philor* in *Ludiannah* district, and 31 new boats for the bridge were under construction at *Ferozpoore*.

For the *Ferozpoore* bridge, 23 new bridge boats were completed; and new superstructure was constructed in accordance with a design by the Superintending Engineer 1st Circle, whereby the boats are placed further apart, and much saving in the number of boats will be effected.

At *Wazirabad*, in *Gujerat* district, 5 ferry boats and 10 new bridge boats were made. An unusually large number of boats of both descriptions is required at this place, where the passage of the *Chenab* is wide and difficult.

258. *Accommodation for Travellers*.—A new staging bungalow was in progress at *Ambala*, near the Civil lines, on the Grand Trunk Road, to

relieve the staging bungalow in the Military cantonment, and to save travellers at times from an unnecessary detour.

New serais and supply-houses have been built at several places in the districts of Hoshiarpore, Gurdaspore, Syalkot, Gujranwala, Multan, Montgomery, Jhang, Mozaffargarh, Gujrat, Jhelum and Shalipore, and others are in progress; additions have been made to certain of these buildings to afford accommodation for European travellers.

A new staging bungalow and out-offices were constructed at *Dawal*, in the Rawal Pindi district, on the road to *Kashmir*; and a tank at *Labana-wala*, on the Grand Trunk Road, between *Rawat* and *Mundra*, where water was much required, was deepened and improved.

In the Hazara district, a rest-house was built at *Kalapani*, midway between *Abbottabad* and the *Thandiani* sanitarium.

Rest-houses were constructed at *Shubaz Kheyl* and *Gumbela*, in Bannu district, on the high road from *Kohat* to *Dera Ismail Khan*.

Four tanks were constructed at different places on road-sides in the *Dera Ismail Khan* district.

259. *River Improvements*.—The Indus river conservancy establishment has been chiefly employed during the last working season, in removing the snags or stems of trees that obstruct the navigation. A large number of these have been removed by chain tackle, or by blasting where this is necessary, about 2500 pounds of gun-powder having been used, and nearly 300 maunds of fire-wood having been obtained from these snags. Many of the obstructions, between *Dera Ismail Khan* and *Lunawala*, were clusters of trees of various sizes locked together, and in some instances extending nearly 20 feet across the channel. In the *Singhi* passage,—the western channel below *Kalabagh*, navigated during freshes,—four large masses of sandstone were removed. These were the remains of an embankment or bund formed several years ago by the Mullick of *Kalabagh*; they were in the centre of the channel, and formed a serious obstacle to navigation during the freshes. A large mass of brick-work, supposed to be the remains of a kiln, was removed from the *Kalur* passage below *Musawali*, giving an increased depth to the channel, which became still further deepened by the force of the current. The wreck of a large boat, sunk a short distance below *Dera Ismail Khan* during the storms of the previous cold season, was also blown up. It had sunk in a narrow channel, and obstructed the navigation of the river.

260. *FORESTS*.—The Punjab Forest Department consists of a Conservator, 2 Deputy Conservators, 10 Assistant Conservators, and suitable establishments.

261. The forest area under the control of the department is divided into the following Divisions:—

Jhelum, Chenab, Ravi, Bias, Sutlej, and Canal (for superintending arboricultural operations on the banks of irrigation canals.)

In addition to the above a new Division was constituted for superintending the arrangements for fuel plantations in the plains, and named the Fuel Division.

262. The following is an abstract showing the operations, income and expenditure of the department:—

Abstract of results of operations of the Punjab

for 50 *deodar* felled by Executive Engineer Kangra Road and 50 *chil* by Executive Engineer Hoshiarpur forests. (e) Includes Rs. 3,697 for *sal* poles cut by Department in Kalesar definition of Depot, and bad system.

263. Throughout the Department the working may be considered as getting into a much more thorough and complete system, and to be attended with better results. Thus, owing to greater care, though only 1569 deodar were felled, as against 5060 in the preceding year, and notwithstanding the expenditure of Rs. 45,602 on the fuel plantations, with almost no immediate return, yet the aggregate money return of the department bears a respectable relation to the expenditure. Throughout also, the officers of the department are getting the deodar forests and the felling of trees by outsiders more thoroughly in hand; though owing to various difficulties, to be overcome by patience and tact, there is still room for improvement in these respects. Some technical obstacles have as yet prevented the Fuel Reserve Division for the care of certain *rukhs* in the plains to be transferred to the Department from being constituted. But it is to be hoped that before next period of annual report these will have been overcome, and the surplus income of the Fuel Reserve counter-balance the expenditure on the Fuel Plantation Division.

264. MISCELLANEOUS PUBLIC IMPROVEMENTS.—The restoration of the Moti Masjid and Akab Hammam in the Palace at *Dehli* has been completed, and, the Dewan-i-Khas and Samman Burj have been taken in hand. In the latter building a handsome marble screen has been cleaned, fixed, and decorated. The cleaning of the marble is in progress in both buildings.

The Kutb Minar was struck by lightning last year, and much damaged in a few places. It has been repaired, and supplied with a lightning conductor.

Some work has been carried out for the preservation of various antiquities in the *Dehli* district.

New railings were erected round the Queen's garden at *Dehli*, and other improvements made.

265. Improvements were effected to the hot spring at *Sonah* in Gurgaon district. A road round *Riwari*, to save the through-traffic from entering the town, and also to facilitate police patrolling, was about half finished. The new Kanound gate of *Riwari* was completed, and the *Dehli* gate of the town of *Firozpur*. Necessaries for women were made at *Riwari*.

266. The *Nagaori* canal bridge, an old native structure, at *Hissar*, was widened and converted into a handsome bridge.

267. Gates and accommodation for municipal police at the four gateways of *Rori*, in Sirsa district, were in progress.

268. The embankment for protecting the town of *Shahabad* from the overflow of the *Markunda* is finished, and is about to be planted with keekar trees.

269. A town-hall for the Municipal Committee of *Hoshiarpore* was nearly completed. A public necessary was built at *Hoshiarpore*.

270. A vegetable market was built at *Dharm sala*, and improvements were made to the station of *Palampore*, in Kangra district.

271. The whole of the new sewage channel for the west side of the city of *Amritsur*, from the jail to within 250 feet of the intended junction of the other channel near the Hakiman gate, has been completed, with exception of a few short breaks (about 200 running feet in all).

The new city wall for the same length has been built simultaneously, and is completed. The Khazana gateway has been re-built.

The earth of the rampart at the back of the old wall has been used for part of the filling of the ditch. Material for the rest of the filling is to be brought in by a short railway, which is under construction for the purpose.

Further progress has been made in the metalling of the streets in the city of *Amritsur*, and improvement of the side drain.

The filling in of one of the large offensive hollows full of stagnant water and filth, in the city is about half done.

• The restoration of the Rainbagh was continued, and small improvements of sewerage, clearance, frontage of streets, were effected.

272. An old building at *Dinangur*, in Gurdaspur district, was converted into a town-hall.

273. The spurs thrown out from the bank of the *Ravi*, near Lahore, to resist the encroachment of the river, have been strengthened and maintained during the year; three thousand trees have been planted for future extension of these spurs if required. An additional spur has been constructed between the old spurs and the Emperor Jehangir's tomb. A large extent of new bank has been thus made, and is now nearly the full height of the permanent bank, effectually protecting the buildings which the river had begun to cut away.

274. Public necessities were built at Syalkot. Improvements were effected in the old fort, comprising levelling, making roads, and a pucka tank.

275. Two new public necessities were built at *Lahore*. Additions were made to the accommodation for the menagerie in the Lawrence Hall gardens, and the roads and drains of the station and city were improved.

276. Improvements were effected to the Firozapore station roads, trees, &c. A new gateway was built for the *Ludiamah* gate of the town, and gates were supplied to two other entrances.

277. Improvements were made to the drainage of *Gyerauwala*. Some streets of *Wazirabad* were widened to admit of the passage of camels and carts where practicable. A street of *Julalpur*, also was widened.

278. A masonry bridge was built to replace a wooden one on the *Teleanwala* or Civil lines road leading to the kucherry at *Jhelum*. Extensive new pavements were laid down in *Pind Dadun Khan bazaar*, and the appearance and condition of the town have been much improved. A canal to supply *Pind Dadun Khan* with sweet water was commenced. A bridge was built near the tomb of *Dadan Khan* over a nullah separating one part of the town from another. A bund was constructed to keep out rain and river water, in flood, from *Kot Sahib Khan*.

279. Extensive improvements were made at *Shahpur* and in all the towns of the district.

280. Expenditure was authorized to continue excavations for architectural remains in *Eusufzai*, in Peshawar district; and some excavations were made in ancient mounds in *Dera Ismail Khan*.

281. A town-hall was built in *Dera Ismail Khan*, for the Municipal Committee. Considerable outlay was incurred in improvements at *Shekh Buddin*.

282. A large tract of land, near the town and between the jail and public garden, of *Dera Ghazi Khan*, was, for sanitary and other reasons, partially levelled and cleared of sand-hills; and it is contemplated to use the space for fairs and public gatherings. New paving and drains were constructed at *Rajhan*; nearly 200 improved shop-fronts at *Dera Ghazi Khan*, *Dajul*, and *Jampur*; a pukka well at *Harrand*; and a bund at *Rajanpur*.

283. A large amount of work has been done in the paving and draining of towns, and in providing public necessities.

284. EXPENDITURE.—The following in an abstract of expenditure on public works (exclusive of Railways, but inclusive of the expenditure of the Forest department,) during the year under report:—

			From	From
			Imperial revenues	Local Funds.
I.	Military works,	Rs.	36,08,975	...
II.	Civil buildings,—			
1.	Revenue,	..	92,586	...

C.—Railways.

285. *Statistics.*—The statement prescribed by the Calcutta Statistical Committee will be found in Appendix III. C.

286. *Dehli Railway.*—It will be seen from the statement above alluded to that 53 miles of the Dehli Railway have been opened for public traffic during the year. The portion opened was in two sections, one at the south end of the line from Ghaziabad to Meerut, 27 miles, on the 18th April, and the other at the north end, from Amritsar to the river Bynas, 26 miles, on 1st November. Towards the end of July, the former section was closed for traffic owing to breaches in the embankment caused by an unprecedentedly heavy local rain-fall; and as to guard against any similar accident in future, it was found necessary to give 114 feet additional waterway in about 12 miles length of railway, the line was not re-opened for traffic till 1st November. The earnings on both sections are as yet small, but are steadily increasing.

287. *Punjab Railway.*—During the year under review, the southern terminus of the Punjab Railway was at Rajghat, on the river Chenab, instead of at Sher Shah. The line to the latter was abandoned, as steamers were unable to lie along the bank at that point, and a branch, 5 miles in length, was made to Rajghat, which became the landing and departure place of the river steamers.

A branch was proposed at a cost of about Rs. 82,000 from the Multan station to the Heerun gate of the city of Multan, in the hope of attracting the entire local traffic between the city and Rajghat, which was said to be considerable; but the Government of India, being of opinion that the project was one to which the guarantee could not legitimately be given, the scheme was dropped.

288. *Management of the Railways.*—The conduct of the management of the Punjab and Dehli Railways during the incumbency of the late Agent, Lieutenant-Colonel N. W. Elphinstone, occupied a large share of attention. A Commission of Public Enquiry was appointed by the Government of India, and sat for 37 days, from 22nd July to 30th September 1867. The report of the Commission, generally condemnatory of Colonel Elphinstone's conduct, was received with the President's letter dated 23rd October, and forwarded on 28th idem to the Government of India, and intimation has been received that the Board of Directors of the Scinde Railway has dispensed with the services of Colonel Elphinstone, and appointed General Saunders Abbott as their Agent for the Punjab and Dehli Railways.

289. The Acting Store-keeper, Mr. W. B. Scott, was charged under section 403 of the Penal Code with dishonest misappropriation, under section 406 with criminal breach of trust, and under section 408 with criminal breach of trust as a servant, and was found guilty on all the charges, and sentenced to 18 months' rigorous imprisonment. And Mr. J. J. Robinson, Chief Accountant Punjab and Dehli Railways, was charged under section 465 of the Penal Code with forgery, and under section 468 with forgery with intent to cheat, and was found guilty, and sentenced

to 7 years' rigorous imprisonment. Civil actions for account still lie against the latter, and the late Agent is without doubt liable to the same.

290. *Carriage of specie.*—The following rates for the carriage of specie by rail were approved :—

Gold, any weight	3	pie per maund per mile.
Silver, under 20 maunds...	3	do.	do.	dc.
Do. over 20 maunds...	2	do.	do.	do.
Copper, under 20 maunds..	1½	do.	do.	do.
Do. over 20 maunds ..	1	do.	do.	do.

The Company to be responsible if the value of the specie carried is insured at ½ per cent, for amounts under Rs. 500, and at special rates for amounts above that value. And it was ruled that Government can claim no advantage over the public in the transport of treasure by rail.

291. *Police*—A complete scheme for providing Government police over the entire system of the Punjab and Dehli Railways from Multan to Dehli, at a cost of about Rs. 60 per mile, was approved, and referred for the consideration of the Government of India and the Board of Directors.

292. *Railway Extension.*—Instructions were received in April 1867, that no immediate steps were to be taken in furtherance of the scheme for a railway through the Indus valley and from Lahore to Peshawar, and in December a comprehensive review was called for of the requirements of this province as regards railway extension.

Accordingly, two Committees were appointed to collect information and to report on the two main lines considered most necessary for the welfare of the Punjab, viz., the Indus valley line from Multan to Kotri, and the line from Lahore to Peshawar.

293. *Branch Railways.*—It was also suggested to the Committees that they might consider branch railways from Raiwind to Ferozpur from Amritsar to Pathankot, from Ambala or its vicinity to Pinjor or Kalka, and from Gujranwala to Syalkot. Their reports are still awaited.

294. *Lahore and Peshawar Railway Survey.*—It has since been determined that a line of railway from Lahore towards Peshawar shall be undertaken without the intervention of a Guaranteed Railway Company, and as far as Gujranwala, about 49 miles from Lahore, the direction of the line has been fixed, and arrangements are in progress for its prosecution during the financial year 1868-69. From Gujranwala upwards, a survey was commenced by a staff of Engineers under the direction of Mr. H. P. L. Mesurier, late Chief Engineer of the Jubbulpore Extension of the East Indian Railway, for an alternative line in the vicinity of the Grand Trunk Road viâ Jhelum to Rawalpindi.

295. *Maximum rates and fares.*—Her Majesty's Secretary of State having approved of a system of maximum fares and rates for Indian Railways, it was determined by the Governor General in Council that decision on the following matters should, for the present, be retained by the Government of India :—

- 1st.—The fares for the lowest class of passengers.
- 2nd.—The rate for food grains.
- 3rd.—The rate for coal.

The maximum fares and rates of all other classes of passengers and descriptions of goods to be fixed by Local Governments, reserving, however, the right of the Government of India to interpose should occasion seem to require it.

296. *Government audit and control of accounts.*—The new system of Government audit and control has been in force since 1st January 1867, and has worked well from the period of the arrival at Lahore of an Auditor appointed by the Board of Directors on behalf of the Company. Up to the time of the suspension of the late Agent in the beginning of August, every possible obstruction was thrown in the way of the Government audit of accounts.

Detailed rules were issued for the apportionment of general charges between Capital and Revenue.

297. *Carriage of Company's letters.*—During the past year it was decided that Railway Companies in India have the right to carry letters on their own business by their servants independent of the Post Office.

298. *Proposed amalgamation.*—The questions were raised of amalgamating the Punjab and Dehli Railway Companies into one, and of stopping the system of the latter at Ghaziabad. Both measures were approved by this Government.

299. *Carrying capacity of waggon stock.*—The important subject of the carrying capacity of the waggon stock in use on the Punjab Railway was investigated, and it was found that, while from 8 to 10 tons of ordinary merchandize can be loaded in a covered goods waggon, the springs and axles can only bear up to about 6 tons. The axles, therefore, were recommended to be renewed, and the springs to be strengthened.

300. *Treatment of Native travellers.*—The opinions of the chiefs and gentry of the Punjab were invited as to the treatment of Native travellers on the railways in this province, and the result was satisfactory and creditable to the management of the Punjab and Dehli Railway Companies.

301. *Expenditure.*—The total expenditure on Railways in the Punjab during 1867-68, was Rs. 94,38,478; of which Rs. 1,04,262 were from imperial revenues, and Rs. 93,34,216 from guaranteed capital.

D.—Agricultural.

302. Statements III. D—1 and 2 will furnish information regarding crops and stock. This being the first occasion upon which the returns have been furnished, the statistics can be considered as approximate only. Statement 3 of the Statistical Committee's returns has not been adopted, as the information could not be procured without difficulty and expense.

303. From the former of the returns it will be perceived that, during 1867-68, 97,52,165 acres of land were under cultivation for spring crops, and 92,50,245 acres for autumn crops. Of the spring crops, upwards of 50 per cent was wheat, and 30 per cent other food grains; 4 per cent consisted of oil seeds, and less than 2 per cent vegetables; 76,666 acres were under tobacco, 16,872 under poppy cultivation for opium, and 5,187 under tea. Of the autumn crops, about 8 per cent was rice; about 7 per

cent other food grains; about 4 per cent was sugar-cane; between 8 and 9 per cent cotton; 67,546 acres were under *indigo*, and 188,671 acres under oil seeds.

304. *Cotton*, it will be perceived, is largely grown in almost every district; *sugar-cane* principally in the districts of the Amritsar and Jalandhur Divisions. *Indigo* is produced in large quantities only in the districts of Multan, Mozaffargurh and Dera Ismail Khan. *Tea* is confined to the Kangra district, where its cultivation is carried on chiefly by European settlers or managers of estates owned by joint stock companies. The number of estates managed by Europeans is now 26, and the out-turn of tea was, in 1866-67, 180,000 lbs; the Kangra teas are now finding a good local market, both among Natives and Europeans; they are supplied to the Commissariat, and some have found their way to the English markets; and there is a prospect of a new market for the teas in Yarkand, to which place consignments of tea were, for the first time, despatched this year. As the subject of the development of tea cultivation in the Kangra hills is one of special interest, a copy of a report furnished by the Commissioner of the Jalandhur Division upon the progress and prospects of tea planting in that locality is annexed to this report, *vide* Addendum A.

305. *Chinchona*. The experimental Chinchona plantation established by Major Nassau Lees at "New Quito" between Palampur and Dharmasala, in the Kangra valley, has been removed to *Bawarna* in the Palam valley, in which locality other plantations have been established; all of them give promise of success, and a detailed account of them will be found in the report of the Financial Commissioner for the year 1867-68.

306. *Flax*. It is to be regretted that no satisfactory progress can be reported in the matter of supplying prepared flax to the home market, although it has been long demonstrated that the fibre can be exported at a great profit. The Belfast Company being unwilling to advance further sums to carry on an undertaking so far removed from their personal control, disposed of their concern at Syalkot; but their successors do not appear to possess the requisite capital, and it is feared that unless some substantial capitalist appear, or a local company be formed, this promising undertaking must come to an end.

307. *Stock*. An attempt has been made to give the information required in the Statistical Committees' statement; but the statistics are incomplete, and can only be regarded in the light of a rough estimate. Reliable statistics of this nature have only been lately obtained for the first time from England and Wales, at an expenditure of £10,000 (*vide* the last number of the Statistical Society's Journal,) and it is hardly to be expected that such statements can be furnished in India without the entertainment of a special establishment for the purpose.

E.—Prices of Produce and Labor.

308. Tables showing the average price of produce and skilled and unskilled labor, and hire of carts &c., will be found in Appendix III. E—1 and 2.

309. It will be perceived that the rates for skilled labor vary from 4 to 12 annas (6d. to 1s. 6d.) *per diem*, masons and carpenters being usually the best paid. The rates of unskilled labor range from 2 annas (3d) to 5 annas (7½d) *per diem*. There has been a considerable rise in rates in places affected by the railway and other public works, and labor in any shape commands higher remuneration than formerly; but as prices of the necessities of life have risen in even a higher ratio, owing chiefly to the increased facilities for export, it may be doubted whether the position of the unskilled labouring classes has materially improved.

F.—Mines and Quarries.

310. The only mines at present extensively worked in the Punjab are the Government *Salt* mines of the Salt Range and Kalabagh, and those in the hills between Kohat and Bannu. The out-turn from the former mines amounted in 1867-68 to 4,76,237 maunds of 80lbs, which are sold at Rs. 3 a maund, and yielded an income to the Government of Rs. 35,89,897; the out-turn from the latter amounted to 390,671 maunds, which were sold for Rs. 83,135.

311. Extensive *Slate* quarries exist in the Kangra and Chamba hills, and are beginning to be systematically worked. Those at Kanyara, within 5 or 6 miles of Dharmasala, and those near Dalhousie, are being scientifically worked by European Companies. Slate quarries exist also in the Mewatti hills near Riwari in the Gurgaon district, and have been lately leased to the Kangra Valley Slate Company.

312. *Iron* of excellent quality is found in many parts of the Kangra hills in the vicinity of Mandi, and in the Gurgaon district; and *lead* is found in the hills of Simla and of Kangra; but the cost of smelting or carriage, or both, prevents the possibility of the lead mines being worked with success at present.

313. The *coal* or *lignite* of the Salt Range is believed to be but limited in quantity, and a large portion is too inaccessible to be of practical value; but the fuel is utilized to some extent by the steamers of the Punjab Government Steam Flotilla, for which it is employed in preference to wood fuel in the voyage between Kalabagh and Mukkud—where fuel with a maximum of heating power and a minimum of weight is desirable to enable the steamers to make way against the rapid steam.

G.—Manufactures.

314. The form prescribed by the Calcutta Statistical Committee under this section, is not applicable to the Punjab, except as regards native towns; and has not been given on the present occasion.

315. The first volume of a valuable work by Mr. Baden Powell, c. s., Curator of the Lahore Central Museum, entitled "*Hand-book of the Economic Products of the Punjab*," comprising raw produce, has recently been prepared and published under the orders of this Government; the 2nd volume, containing a description of manufactures and fine arts, will, it is expected, be ready for publication early in 1869.

The following description of the manufactures of the Punjab is taken from the introduction of that work :—

“Of manufactured articles in use in the province, the great majority are produced within the Punjab; a few are however brought in by the North-Western Frontier trade. The demand for European piece goods, and for various other articles of European manufacture, useful and ornamental, is daily increasing.

“Within the province, several cities and districts have become celebrated for particular manufactures; and native society, ever slow to change, maintains the distinction, although many other places might, and indeed to some extent do, produce equally well the very same articles.

“Cotton goods are of universal manufacture, but the Jalandhur Doab is especially celebrated for its cotton fabrics, and among them the ‘ghāti,’ or diaper cloth. The fine cotton ‘lungis,’ of Peshawar, and the carpets of the Derajat, are also remarkable. Umbrellas are manufactured in the Jalandhur Doab.

“Multan, Bahawalpur and Lahore, have long been celebrated for silks: Bahawalpur especially for its figured and fancy silks, and Lahore for striped and plain silk pieces. Patiala, Gurdaspur, Shahpur, Peshawar, Ludianah and Amritsar, also manufacture silks.

“Woollen fabrics are not much made in the plains, except coarse blankets. The best come from Rohtak, but the produce of Sirsa and Leia is by no means despicable.

“Pashmina fabrics, embroidered with silk, and plain pashmina cloths, are produced extensively at Amritsar and Ludianah, and a few at Lahore. Shawl weaving, an art introduced by emigrated colonies of Kashmiris, is practised at the same cities, as also at Nurpur and Adinanagar, but with greatest success at Amritsar; none of these cities, however, equal either in fineness of texture or beauty of colors and design, the genuine fabrics of Kashmir. The shawl weaving of Gujerat and Gurdaspur is quite inferior. In Lahore, shawls are made from ‘Kabuli pashm,’ a wool which is inferior to the Thibetan shawl wool. These shawls are plain, and not patterned like the others. They are called ‘Lahori chaddar.’

“Lahore and Delhi are noted for their gold-woven fabrics, and light silk fabrics interwoven with gold threads, as well as for all kinds of work in tinsel or Kalabatun.

“The art of embroidery is one very consonant with the habits of the people; their patience and delicate handling render success certain, and there is scarcely a town or city where creditable embroidery cannot be found. But Delhi is the great place for embroidered fabrics, both in silk and gold threads. In Lahore and Amritsar the manufacture of ‘Kalabatun,’ or gold thread, is extensively carried on.

“Most of the large cities manufacture vessels of brass and other alloyed metals; for smaller work they prepare the alloy in their own ‘Kuthalis,’ or crucibles; for making the large sizes they prefer the fine sheet metals imported from Europe.

“ The manufacture of armour,—swords, guns, and the like,—once had its grand centre at Lahore; but when the Sikh rule passed away, the demand ceased. Of the cutlers, some are still in existence, and can work; many of them have settled at Nizamabad in the Gujeranwala district (their manufactures were well represented in the Exhibition), others have gone to Gujerat, the cutlery of which place is noted; and the ‘Koftgars,’ who used to inlay with gold the shields, and armour of the Sikh chieftans, by hammering with consummate skill gold wire in various patterns into the steel surface, have mostly left Lahore for the Kotli Loharan in the Syalkot district. They have recently also gone into the Gujerat and Gujeranwala districts, where they develop their art in works of peace; and now, instead of Sikh armour, inlay caskets, studs, vases, paper-cutters, letter-weights, and other fancy articles. There are still persons at Lahore who can work magnificently in inlaid armour, and do so occasionally at the call of the collectors of articles of vertu; but in Lahore it is almost impossible to get the articles above enumerated as made at Syalkot, Gujerat or Nizamabad.

“ Much encouragement has recently been given to this beautiful art; and the subject is well worthy the attention of European merchants, as these articles find a ready sale at home. Most of the native workmen are however poor, and require the assistance of pecuniary advances to carry on the work; and, as they have but little originality as to the form of articles, it is desirable to furnish them with full size drawings, such as of caskets, candlesticks, vases, inkstands, &c.; with the help of these the most beautiful specimens of this art may be produced.

“ Ivory painting is carried on with unequalled success at Delhi; as is also the art of making jewellery in the European fashion. Enamelling of great beauty is executed at Multan, and also in the Kangra district. Here, as in all other countries, the localization of peculiar manufactures in districts and even within the confines of a single village is observable.”

H.—Trade.

316. An organized system of procuring trade statistics has been set on foot; returns of exports and imports are kept up in the chief commercial towns of the province, and statistics of external trade are obtained by registering the traffic passing the frontier on the principal lines of communication. The general results for the last nine months of the year 1867-68 are given in Appendices III. H—1 and 2. These results are not at present very reliable, especially in reference to the value of the articles, but every effort is being made to secure improved accuracy for the future.

The quantities given in appendices III. H—1 and 2 do not include the trade of the Upper Indus conveyed by the Punjab Government Steam Flotilla, which amounted during the year to 48,673 maunds of 80 lbs, nor the trade by the Punjab and Dehli Railways, which was as follows during the year :—

	UP. Maunds of 80 lbs.	DOWN. Maunds of 80 lbs.	Total. Maunds of 80 lbs.
Punjab Railway,	7,93,612	8,54,438	15,48,050
Dehli do.,	24,860	64,471	89,331
Total, ...	8,18,472	9,18,909	16,37,381

317. **EXTERNAL TRADE.**—The following is an abstract of the external trade of the province from 1st July 1867 to 31st March 1868 :—

	WEIGHT. Maunds of 80 lbs.	VALUE. Rs.
Imports,	25,20,744	1,72,91,131
Exports,	22,56,013	2,63,37,253
Total, ...	47,76,757	4,36,28,384

Thus it will be seen that the imports slightly exceed the exports in quantity, but are considerably less in value.

The principal articles of import into the province were :—

	Maunds of 80 lbs.
Salt,	10,24,127
Grains,	5,65,745
Sugars,	3,08,475
Rice,	95,260
Fruits,	67,182
Oil seeds,	60,496
Metals,	53,455
Cotton Cloths,	25,893
Ghee,	20,525
Liquors,	17,290
Spices,	14,921
Tobacco,	14,544
Cotton,	10,614

The principal exports were :—

Sugars,	11,57,306
Salt,	3,42,528
Rice,	1,68,453
Grains,	1,59,247

Cotton Cloths,	87,303
Metals,	61,138
Oil seeds,	56,340
Cotton,	25,785
Oils,	18,264
Ghee,	18,237

318. The following table shows, in an abstract form, the trade of the Punjab with Foreign States and other Provinces :—

	IMPORTS.	EXPORTS.	TOTAL.
	Rs.	Rs.	Rs.
Cis-Sutlej Independent States, ...	27,67,389	31,63,184	59,30,553
Kashmir territories (including Jammu) and countries on the N E frontier,	7,90,575	4,59,897	12,50,472
Cabul and countries on the North-West frontier, ...	15,92,203	14,29,677	30,21,880
Rajputana and Central India, ...	25,08,783	1,63,68,836	1,88,77,619
North-West Provinces, ...	40,11,220	17,96,748	58,07,968
Bengal, ...	12,55,315	1,50,421	14,05,736
Bombay and Sind, ...	38,45,434	28,57,940	67,03,374
Other places, ...	5,20,212	1,10,570	6,30,782
Total, ...	1,72,91,181	2,63,37,253	4,36,28,384

The imports from the Cis-Sutlej States were chiefly grains, oil-seeds, sugar and spices ; and the exports, salt, rice and sugars. From Kashmir and the North-East frontier the imports were chiefly grains, ghee, fruits and pashmina goods ; and the exports, sugars, salt, and cotton cloths. With Cabul and the North-West frontier, the imports were chiefly fruits and grains ; and the exports salt, sugars, tea, and cotton cloths. Salt and grains were largely imported from Rajputana and Central India, the exports being grains, sugars, rice and metals. From the North-Western Provinces were received chiefly sugars, rice and grains ; and grains, oil-seeds and salt were exported thither. To Bengal were sent pashmina goods and leather ; rice, tobacco and metals forming the imports. The principal articles received from Bombay and Sind were liquors, metals and cotton cloths ; the exports consisting chiefly of salt, cotton, and grains.

319. COMMERCE WITH CENTRAL ASIA.—The promotion of trade between the nations north and west of the Himalayas and British India is a subject which has long occupied attention. One of the first acts of the Board of Administration for the affairs of the Punjab was the abolition of frontier customs duties formerly levied by the Sikh Government. This gave a great stimulus to trade, but nothing further of a special character was done, beyond the improvement of internal lines of communication from the frontier to Lahore, until 1860, when measures were taken for obtain-

ing reliable statistics of the existing trade between Yarkand, Kashgar and Bokhara on the one hand, and Russia and British territories on the other, and the routes by which that trade was conducted.

A mass of valuable information upon this subject was presented in Mr. Davies' Report on the Trade and Resources on the North-Western Boundary of British India, which established the fact that there was a great demand for goods of European and Indian manufacture in the regions of Central Asia, and that the wants of Central Asia were practically nearer the sources of supply *viâ* India than *viâ* Russia, so that the traders in European goods from the side of India ought to be able to compete successfully with traders from the Russian side.

Encouraged by the facts disclosed in the above report, the Government has made great efforts to improve, so far as lies in its power, the means of mercantile communication with Eastern and Western Turkistan.

320. As regards trade with *Western Turkistan* a Steam Flotilla has been established on the Upper Indus, plying between Mukhud and Sukkur, as a feeder to the Flotilla of the Lower Indus; thus affording safe, cheap and tolerably speedy mercantile communication between Peshawar, Dera Ismail Khan, Dera Ghazi Khan, the emporia of the trade between British territory and Afghanistan, and the sea-board.

Improvements have been effected and are being effected in the construction of the steamers, in the channel of the Indus, and in the training of the native pilots, which promise to enable us effectually to overcome the physical difficulties in opening out the navigation; and endeavours are now being made to remove a great *practical* obstacle to the development of trade by the Indus, by the establishment of an *agency* and a *through tariff* for the conveyance of goods from Peshawar to Karrachi.

The establishment of an annual fair at Peshawar has been long in contemplation, and arrangements have been made for carrying the measure into effect directly the political situation of Afghanistan will admit of it.

321. As regards trade with *Eastern Turkistan*, the reduction of the transit duties levied on goods passing between Yarkand and British territory *viâ* Ladakh, to an *ad valorem* duty of 5 per cent, calculated on the invoice price, has been effected; an English agent has been appointed at Ladakh for guarding the interests of traders with or from British territory; a route has been discovered between the confines of British territory and Yarkand which avoids the difficulties of the Kara Koram pass, and is suitable for camels. Great improvements have been and are being effected in the road between the confines of British territory nearest Yarkand and Palampore in the Kangra valley.

An annual fair has been started at Palampore for the interchange of the goods of Europe and India and Eastern Turkistan; a road is being constructed from Palampore to the plains, at a gradient suitable for carts.

Lastly, it has been proposed to appoint an *Aksakal*, or native agent, at Yarkand for the purpose of advocating the interests of British traders at that important emporium.

The results of these measures appertain to the future rather than to the present; but there is every hope of ultimate success, and in particular the latest reports from Ladakh indicate that there is a favorable opening for trade in that quarter, especially in broad cloth, piece goods and tea.

Copy of the official reports of the fair at Palampore will be found in Addendum B.

322 INTERNAL TRADE.—The following table shows the trade of the principal towns of the province:—

	IMPORTS.		EXPORTS.		TOTAL.	
	Mds.	Rs.	Mds.	Rs.	Mds.	Rs.
Dehli, ...	9,48,068	83,21,989	4,63,889	1,66,25,079	14,11,957	2,49,47,068
Amritsar, ...	9,31,466	40,46,067	3,54,778	56,92,140	12,86,244	97,88,207
Ambala, ...	68,323	43,08,865	44,954	50,89,283	1,13,277	93,98,148
Multan, ...	4,28,324	60,18,177	1,00,269	27,31,925	5,28,593	87,50,102
Bhiwani, ...	2,91,406	66,50,374	1,23,123	9,41,637	4,14,529	75,92,011
Peshawar, ...	1,79,098	45,68,691	1,20,189	10,64,626	2,99,287	56,33,317
Ludiannah, ...	1,06,241	35,17,468	42,911	2,55,860	1,49,152	37,73,328
Jalandhur, ...	1,00,525	16,65,858	44,044	6,34,258	1,44,569	23,00,116
Lahore, ...	6,29,599	18,52,327	42,604	1,60,821	6,72,203	20,13,148

PART IV.

STATISTICS OF INSTRUCTION.

A.—Ecclesiastical.

323. The return of Religious Institutions prescribed by the Statistical Committee has not been adopted for the present.

Information in regard to the progress made in Ecclesiastical buildings during the year under report will be found in para 189, *ante*.

B.—Education.

324. STATISTICS OF EDUCATION.—The statistical forms prescribed by the Calcutta Committee have been filled in as far as practicable from the information available, and will be found in Appendices IV. B—1 and 2.

325. FINANCIAL STATISTICS.—The subjoined comparative statement shows the amount placed under the general control of the Director of Public Instruction for Educational purposes during the years 1866-67 and 1867-68 :—

	1866-67. Rs.	1867-68. Rs.	Increase or decrease.
From Imperial revenues,	5,92,605	6,21,331	+28,726
From Local sources, viz :—			
(1) Educational Cess,	2,50,810	2,16,618	—34,192
(2) Endowment of Nawab Fazl Ali Khan, ...	6,690	7,286	+596
(3) Subscriptions and Donations, ...	1,779	6,415	+4,636
(4) Fees,	17,477	17,336	—141
(5) Private contributions and receipts in Grant-in-aid institutions, ...	1,01,562	1,38,959	+37,397
Total from Local sources, ...	3,78,318	3,86,614	+8,296
Grand Total, ...	9,70,923	10,07,945	+37,022

From the above it will be seen that the total income for Educational purposes increased from Rs. 9,70,923 to Rs. 10,07,945; of the total amount, Rs. 6,21,331 were provided from Imperial revenues, and Rs. 3,86,614 from local sources; of the latter, Rs. 1,38,959 were derived from private contributions to grant-in-aid institutions (an increase of Rs. 37,397 as compared with 1866-67), Rs. 17,336 from fees, and Rs. 6,415 from subscriptions and donations, an increase of Rs. 4,636 as compared with the previous year.

326. The following table shows the expenditure for the same two years :—

	1866-67.	1867-68.
Salaries of general establishments,	90,934	89,588
Salaries in Government Colleges and Schools, ...	3,97,893	3,74,325
Scholarships,	31,407	33,638
Buildings,	46,602	14,833
Contingencies,	1,44,430	1,33,274
Govt. contributions to Grant-in-aid institutions,	1,36,254	1,59,343
Private do. do.,	1,01,562	1,38,959
Total,	9,49,082	9,43,960

The above statistics, while they exhibit a slight decrease in expenditure on education through *direct* Government agency, show a satisfactory increase of such expenditure by private institutions assisted by grants-in-aid from the State.

327. GENERAL STATISTICS OF EDUCATIONAL PROGRESS.—There were in 1867-68 in the Punjab—

- 1,912 Government Educational Institutions.
- 801 Grant-in-aid Institutions.
- 4,888 Indigenous Schools.

The above institutions include—

- 3 Colleges—two Government, and one grant-in-aid—affording instruction to students who have passed the Calcutta University Entrance Examination ;
- 25 Zillah or District Schools, teaching up to the Standard of the Calcutta University Entrance Examination ;
- 8 Aided Schools of a corresponding grade ;
- 49 Branch District Schools, teaching up to the Standard of the lower classes of Zillah Schools ;
- 77 Government Town Schools ;
- 88 Aided Schools of a similar grade ;
- 93 Aided Schools of a lower grade ;
- 1,555 Government Village Schools ;
- 23 Jail Schools ;
- 272 Government Female Schools ;
- 507 Aided ditto ;
- 9 Government Normal Schools ;
- 4 Aided ditto (female).

The average attendance in the above institutions was as follows :—

Government Schools,	64,631
Aided Schools,	15,291
Indigenous Schools,	49,947

giving a total of 1,29,869 students, or 1 student to 135 persons. This is a falling off both of schools and scholars, as compared with last year ; the decrease occurs chiefly in the case of female and village schools, whether Government or grant-in-aid, and is mainly attributable to the sickliness of the first half year of 1867-68.

328. UNIVERSITY EXAMINATIONS.—There was a great improvement in the success achieved by Punjab students in passing the Calcutta University Examinations. During the year, 4 out of 7 candidates from Punjab Colleges passed successfully the examination for the B. A. degree, and 5 out of 11 the First Arts Examination ; while 44 out of 73 succeeded in passing the Entrance Examination ; of these, 20 were educated in private institutions.

329. COLLEGES.—*Lahore Government College*.—The number of students in this institution was small ; but one of them succeeded in obtaining the degree of B. A. ; while 9 students left their studies on obtaining lucrative appointments.

330. *Dehli College*.—The progress of this institution was very satisfactory. The number of students rose, during the year, from 19 to 26; one student passed successfully the B. A. Examination of the Calcutta University, and 4 out of 6 candidates passed the First Arts Examination; while 7 students were during the year appointed to offices of an average salary of Rs. 40 per mensem.

331. *Scholarships*.—In addition to the Government scholarships, three scholarships of Rs. 10 per mensem in value were, during the year, founded by private individuals; and recently a new scholarship of Rs. 35 per mensem has been founded and attached to the Dehli College in memory of Mr. Charles Gubbins Bathoe, formerly Magistrate of Dehli, through the liberality of his widow.

332. *ORIENTAL UNIVERSITY*.—The movement in favor of the establishment of a University at Lahore has been noticed in former reports. The main object in view is to provide for the establishment of a system of education which shall give greater encouragement to the communication of knowledge through the medium of the vernacular, to the development of a vernacular literature, and to the study of the Oriental classics, than is afforded by the existing system, which is framed to meet the requirements of the Calcutta University; another object is to secure for the native community some voice in the regulation of the educational system of the province. During the year under report, contributions of upwards of Rs. 80,000 have been received from Native Chiefs and others, towards an endowment fund for the University, and invested in Government securities; further donations to the amount of Rs. 82,311 have been promised, and annual subscriptions have been promised (chiefly by members of the native community) to the amount of Rs. 13,691.

Definite proposals for the establishment of a University at Lahore, to be regulated on the principles set forth above, were submitted to the Supreme Government in May last, and the Supreme Government was solicited to sanction a grant-in aid equivalent to the annual income derived from the above sources.

In reply, the Supreme Government, while approving generally of the principles of the movement, has expressed the opinion that the establishment of a University for the Punjab is premature; but it has indicated its willingness to found a University for Northern India, and also to accord a grant-in-aid equal to the annual value of the income derived from private sources for the purpose of founding a Collegiate institution at Lahore, to be conducted on the principles of the proposed Oriental University.

333. *ZILLAH SCHOOLS*.—These have during the year been divided into two classes, higher and middle—and at Dehli the branch schools (which teach up to the standard of the lower classes) have been placed on a grant-in-aid footing. The system promises to work well. It relieves the highly paid masters of the Government zillah school of the duty of superintending the elementary education of boys in the lower classes, and thus enables them to devote more time and attention to the higher classes; while it carries out the principles of the Educational Despatch of 1854, in assigning to private institutions so much of the business of education as can be satisfactorily conducted by their agency.

During the year, the number of scholars in the Government schools has decreased, partly in consequence of the introduction of the system above referred to, partly owing to the unhealthiness of the season, and partly in consequence of an increase in the rate of fees, which was considered by the Supreme Government to be unnecessarily low; but notwithstanding these drawbacks, the number of students in the first three classes increased from 259 to 277, and 23 students successfully passed the Entrance Examination of the Calcutta University.

334. TOWN SCHOOLS.—The number of these institutions decreased during the year from 82 to 77; one having been raised to the rank of a zillah school, and the rest reduced to the grade of village schools. The number of scholars attending has decreased from 7,184 to 6,990, but the amount realized from fees increased from Rs. 1,511 to Rs. 1,933. The cost of educating each pupil fell from Rs. 5-5-1 to Rs. 4-6-10; and the cost to Government from Rs. 3 to Rs. 2-11-7.

335. VILLAGE SCHOOLS.—The number of village schools has been reduced from 1,660 to 1,555, and the number of students has decreased from 45,298 to 42,632; some of the worst schools having been closed in order to obtain funds for improving the position of village teachers, who are at present, as a rule, extremely ill-paid.

In the Dera Ghazi Khan district, the people have submitted to an additional educational cess, which has been supplemented by a Government grant-in-aid; and by this means the village schools in that district have been greatly improved, and the numbers attending have considerably increased. It is hoped that it will be possible to extend the system to other districts; but until it has been found practicable to do so, or in some other way to obtain additional funds, it will be a matter of great difficulty to effect improvement in village school education.

336. FEMALE EDUCATION.—The following extract from a despatch to the Supreme Government gives a brief history of the state of female education in this province up to date:—

“As soon as an Educational Department was organized for this province, the subject of Female education began to receive attention; but progress was slow, and the people, where they did not evince opposition, took little or no interest in the movement. Thus matters stood until the year 1862, at which period the number of girls' schools in the province was 52, and the number of scholars 1,168. The cost of the schools was defrayed entirely from the Educational Cess Fund, nothing being contributed either from the Imperial revenues or from private sources.

“In the year 1862, an important change took place in the prospects of Female education. At the close of that year, a large *Darbar* or assemblage of the native nobility and gentry was convened at Lahore by the late Lieutenant-Governor, Sir R. Montgomery, to witness the distribution of prizes to the successful students of Government and Aided schools. During the proceedings, Sir R. Montgomery took occasion to address the native gentry of Amritsar and Lahore on the subject of education, and drew their earnest attention to the necessity for providing

“ education for their daughters; and he promised them the liberal assistance of Government in carrying out any practical measures they might themselves devise for the purpose.

“ The exhortations of the Lieutenant-Governor were responded to beyond expectation; Committees of native gentlemen were formed at the cities of Lahore and Amritsar, and it was arranged that the family priests of certain of the best Hindu and Sikh families should each undertake to teach at least one female from his own or his clients' families. Small schools were thus formed, which gradually increased in size and numbers—and the Mahomedans began to join in the movement. The cost of the schools was defrayed, at first, entirely by Government; and as the native community strongly objected to their inspection by Europeans, Native Committees of supervision were appointed, through whom the funds were disbursed. The example of the people of Amritsar and Lahore was soon followed elsewhere, especially in Dehli, Jalandhur, Jhelum, Gujerat and Rawalpindi—in the former through the exertions of Mr. F. Cooper, in Jalandhur through those of Lieutenant-Colonel Elphinstone, and in Jhelum, Gujerat and Rawalpindi through the exertions of the local authorities and the public spirited influence of a Sikh gentleman, Baba Khem Singh, the head of the priestly family of Bedis. By the middle of 1863, there were 103 schools, and 2,224 female scholars in the Punjab; and at the close of Sir R. Montgomery's administration (*i. e.* the beginning of 1865), the number of girls under instruction exceeded 10,000; and one of the last acts of the late Lieutenant-Governor was to bestow in public Darbar suitable rewards upon those who had distinguished themselves in the cause of Female education. From that period, Female education has continued to extend, and at the close of the year 1866-67, the number of schools was 945; the number of females under instruction 17,174; while the amount annually expended from the Imperial revenues on Female education between 1861-62 and 1866-67, rose from *nil* to Rs. 38,833; and the annual amount of voluntary contributions increased during the same period from *nil* to Rs. 12,816.

“ The subjoined statistics will shew in further detail the progressive increase of Female education up to the close of 1866-67, and sums expended thereon from Imperial and other sources :—

YEAR.	Number of schools supported entirely by Government.	Number of private schools aided by Government.	Total number of schools.	Total number of scholars attending.	Total expenditure from all sources on Female education.	Amount contributed from Imperial revenues.	Ditto from Educational Cess Fund.	Ditto voluntary contributions.
1861-62	52	0	52	1,168	3,170	0	3,170	0
1862-63	103	0	103	1,539	5,875	8	5,867	0
1863-64	204	230	434	6,928	38,192	15,042	14,229	8,921
1864-65	272	410	682	12,289	53,768	20,636	18,761	14,376
1865-66	333	695	1,028	16,395	64,034	31,858	16,508	15,668
1866-67	296	649	945	17,174	71,127	38,833	13,035	12,816

"But it will be asked, what has been the practical result of the numerical extension of Female education, and this large expenditure of public funds? And what has been the character of the education imparted? Hitherto it must be admitted the education imparted has been for the most part of a very elementary character, such as the rudiments of reading and writing Hindi and Persian, and the elements of Arithmetic; and some of the schools, it is feared, are schools in name only. The teachers are for the most part very inefficient, being generally elderly Brahmins in the case of Hindu schools, and in the case of Mahomedan schools superannuated Mullas; while—in deference to native prejudice—no efficient supervision has been insisted upon. But even under the above unfavorable circumstances, it is believed that a good deal of good has been done in the way of actual instruction. The Director of Public Instruction reported in 1864, that in the girls' schools in the Jalandhur district 'some of the female scholars were so far advanced as to be able to read Persian fluently, write neatly, understand ordinary Arithmetical operations, had a fair acquaintance with the geography of Asia and the Punjab, and were becoming proficient in knitting, embroidering and sewing.' In the reports of 1864-65, it is noted that 264 pupils of female schools were studying English; and in 1865-66, the Inspector of the Amballa Circle made special mention of the satisfactory progress of female schools in Dehli, and particularly of a school established for the education of the female members of the ex-royal family of Dehli.

"But the most important result achieved has been that the minds of the people have been gradually accustomed to the *idea* of Female education—while their prejudices against the supervision of these schools by English ladies are in a fair way of disappearing. And it is satisfactory to be able to state that—thanks to the exertions of Mr. Aitchison, Deputy Commissioner—the Native Committee of Female Education in Lahore have recently agreed to the appointment of an English lady, to act as Superintendent of the Female Normal School in that city, and to exercise a general supervision over the schools of primary education. The example of the Lahore Committee has been more recently followed by that of the Committee at Amritsar, and will probably ere long be followed elsewhere. Thus a new and important era in the history of Female education in the province may be said to have commenced.

"The above narrative of the progress of Female education relates chiefly to schools of primary education; but during the same period attention has been paid also to the formation of schools for training female teachers. As far back as 1864, a Female Normal School was established at Dehli, through the exertions of Mr. Winter of the S. P. G. Mission in that city, and was at once liberally assisted by the Government. Several well qualified female teachers have been of late supplied by the institution, and have been employed in Government Female Schools. In the same year, two other Female Normal Schools were founded, one at Lahore, and one at Amritsar, at the suggestion of His Highness the Raja of Kapurthala, who contributed Rupees 50 per mensem to the support of each of these institutions. These, however, have been until quite recently under the control of Native Committees, and have not proved so successful as the Dehli institution."

337. Proposals have been made to the Supreme Government for the establishment of additional Female Normal Schools, to be superintended by trained English Mistresses; and for the appointment of a Lady Inspectress for female schools; but the Supreme Government is averse to expending more money upon female education in this province, unless an equivalent is received from private subscriptions. It is impossible however to expect that the native community, which has only with difficulty been induced to *tolerate* female education, will be willing to contribute largely to an object which as yet is regarded as one of doubtful advantage. The prospects of female education cannot therefore be considered very encouraging at present; but it is hoped the Supreme Government may be induced to relax the conditions upon which it undertakes to contribute funds towards this important object.

338. GRANT-IN-AID INSTITUTIONS.—During the year, 17 new grant-in-aid institutions were started, and 7 were closed, making the total number at the close of the year 701. The subjoined table will furnish further particulars :—

Description of institutions.	No. of institutions	No. on the rolls at close of 1867-68.	Average No on the rolls monthly for 1867-68	Average daily attendance.	Grants-in-aid given by Government	Expenditure from all sources other than grants-in-aid given by Government.
Colleges,	1	9	6	6	2,535	3,979
Schools of the Higher Class, ...	8	1,434	1,334	1,030	38,878	35,824
Do. Middle Class, ...	88	2,884	2,673	1,732	55,945	43,323
Do. Lower Class, ...	93	4,644	4,501	3,360	8,222	15,998
Female Schools of Do. ...	507	9,838	10,436	9,052	45,262	34,491
Normal Schools,	4	144	122	111	4,904	5,344
Indigenous Schools,	3,597	...
Total,	701	18,953	19,072	15,291	1,59,343	1,28,959

The general progress of these institutions was satisfactory. From the *Lahore Mission College* two students passed successfully the B. A. Examination of the University of Calcutta; one passed the First Arts Examination. From Bishop Cotton's School at Simla, four, and from the *Lahore Mission School*, three students passed the Entrance Examination; and six

other grant-in-aid Schools sent up one or more successful candidates. The Peshawar and Syalkot Mission Schools are so flourishing that it has been deemed desirable to close the Government Zillah Schools in those districts. In addition to the above, the following grant-in-aid institutions are very favorably reported on by the Inspectors :—

The American Mission Schools at Jalandhur and Rawalpindi ;

The Church Mission School at Dera Ismail Khan ;

The Girls' Orphanage at Ludiannah.

The Church Mission Girls' School Kangra, and that established by the *Anjuman* (or Native Literary Society) in that locality ;

The Female School of the late Nawab Hamid Ali Khan at Dehli ;

The Cantonment Anglo-Vernacular School at Ferozporc ;

The Schools of Lala Wazir Singh, and of Lala Salig Ram and his son Ishri Parshad at Dehli.

339. INDIGENOUS SCHOOLS.—These are returned as 4,888 in number, with an attendance of 49,947 scholars ; but the statistics are not very reliable. Sixty-seven of these schools have received grants from Government. Some of them are well reported of. One in particular (at Fatehghur in the Amritsar district) is reported to be equal to a Government Town School. 9,944 boys are returned as studying Persian ; 2,517 Urdu ; 4,333 Hindi ; and 3,935 Sanskrit. But in the majority of cases little more is taught than the multiplication table, and the “ lundi ” or mercantile system of notation, or the elements of reading and writing the Persian character.

340. NORMAL SCHOOLS.—There were *nine* Government Normal Schools open during the year, with an average attendance of 217 pupils ; the cost to Government of educating each pupil was Rs. 74-9-0, a slight decrease of cost compared with last year. During the year, 48 students obtained certificates of qualification ; but complaints are made that Normal School students are generally of a very inferior class ; and it is feared that such will continue to be the case until the position and prospects of village and town school teachers are improved. At present the majority of village teachers are no better paid than the lowest menial servants.

Besides the above, there were four private Normal Schools assisted by grants-in-aid from Government, *viz.* the School of the *Christian Vernacular Education Society* at Amritsar for training male teachers ; that of the *S. P. G. Mission* at Dehli for training female teachers ; and the Female Normal Schools at Lahore, Amritsar and Kangra, superintended by Native Committees.

The Amritsar School is a very well conducted institution, and has turned out five or six trained teachers during the year ; the Female Normal School at Dehli is also making satisfactory progress, and has supplied several female teachers to Government Female Schools. That at Lahore has recently been placed under the superintendence of a European lady, and promises to improve ; that at Amritsar is about to be similarly superintended ; the Kangra School is in charge of a Native Christian Mistress, and gives promise of being a very successful institution.

341. **CHANGES IN THE EDUCATIONAL DEPARTMENT.**—The office of Director of Public Instruction, vacant by the death of Major Fuller, was filled up by the appointment of Captain W. R. M. Holroyd, Inspector of Schools of the Ambala circle; Captain Holroyd was succeeded in his post of Inspector by Mr. E. Willmot, M. A., Principal of the Dehli Government College; and the latter appointment was conferred on Mr. C. R. Cooke, B. A., formerly a Professor in the Dehli College, but latterly employed in the Educational Department of the North-Western Provinces. Mr. W. Ellis, M. A., was, during the year, appointed Professor in the Dehli College, *vice* Mr. Cooke; and Mr. D. W. Thompson, Second Master of the Lahore Zillah School, officiated as Inspector of Schools, Frontier Circle, *vice* Mr. Hutton, whose death by small pox was announced in the last report.

342. **LAHORE MEDICAL SCHOOL.**—During the year 1867-68, four students were passed as Sub-Assistant Surgeons, of whom one is now House Surgeon of the Hospital, and the remaining three are in charge of Dispensaries; during the same period, 20 students were passed as Native Doctors, and their services were immediately availed of in connexion with the cholera epidemic then raging, and proved very valuable. Thus, from the period of the opening of the institution in 1860, until the present year, it has furnished 10 Sub-Assistant Surgeons, and 71 Native Doctors. There are at present in the English class, 21 students training for Sub-Assistant Surgeons, 57 students in the Hindustani class training for the Government service as Native Doctors, and 18 students supported from local sources training for employment in connexion with District Dispensaries, &c.

The total cost of the institution for the year was Rs. 56,090-15-4, of which Rs. 52,011-15-6 was borne by Imperial revenues, and Rs. 4,078-15-10 was chargeable to fees and other local sources.

C.—Scientific and Literary.

343. **STATISTICS.**—Of the two forms prescribed by the Calcutta Statistical Committee under this section, the first, relating to Scientific and Literary Societies, has not been adopted for the present; the second, relating to the Press, will be found in Appendix IV. C—2.

344. **LAHORE CENTRAL MUSEUM.**—The collection in the Lahore Central Museum has steadily increased, and promises soon to be of considerable value. Among the additions to be specially noticed are—the formation of an Ornithographical department, under the care of Lieutenant Marshall, Assistant Commissioner; a collection of Lepidopterous insects, presented by Mr. A. S. G. Young of the Forest Department; and a collection of coins set on foot by the Curator; among the contributions to the latter may be specially named, a silver coin of *Sophytes*, a medal of *Eucratides* of the rare description bearing on the reverse the heads of *Heliocles* and *Laodice*, and a silver coin bearing the name "*Seleukos*" believed to be novel.

Arrangements are in progress for the transfer of the whole collection to a more suitable building; these will probably be complete in the next cold season.

345. The Museum was opened to the general public in December 1867, and, from then till the end of April 1867, the number of visitors was 26,180.

346. GOVERNMENT BOOK DEPÔT.—During the year, 76,830 books were sold at cost price to Educational institutions; and 2,475 books and maps were distributed gratuitously for use in vernacular schools; and 8,014 books, valued at Rs. 3,514, were distributed as prizes. At the Educational Press, 66,500 copies of vernacular books were printed; and the following new works were issued:—

- (1) Muntakhabât-i-Anwâr-i-Suhaili.
- (2) Sharah-i-Muntakhabât-i-tohfât-ul-irâqain;
- (3) Hal-lughât-i-Muntakhabât-i-Arabia.

347. ACT XXV OF 1867, (*providing for the registration of books published*). The above Act came into force on 1st July 1867. Up to the end of March 1868, 273 books were registered. Of these, 27 were English, 10 Arabic, 11 Sanskrit, 32 Persian, 119 Urdu, 33 Hindi, 17 Gurmukhi, 14 Panjabi, 2 Pushtu, 2 Persian and Panjabi, 1 Urdu in the Roman Character, 2 English and Urdu, and 2 Arabic and Persian. Of these, 147 were printed at Lahore, 67 at Delhi, 28 at Ludianah. Very few of these works were new or original compositions.

348. THE PRESS.—During the year, the following new vernacular papers were started:—

- (1) *Sadik-ul-Akhbâr*, (a vernacular *Moniteur*, published under the superintendence of the Political Agent at Bhawalpore);
- (2) *Adib-i-Hind*, published at Delhi;
- (3) *Muiz Akhbâr*, ditto;
- (4) *Bidia Bilâs*, published at Jammu; making the total number of vernacular newspapers in the Punjab thirteen.

PART V.

STATISTICS OF LIFE.

A.—Births, Deaths and Marriages.

349. There are no means of supplying the information required in Statement V. A. prescribed by the Calcutta Statistical Committee, in so far as it relates to *births* and *marriages*; but a system of registration of *deaths* and causes of death has been in force in this province since the commencement of the year 1865; the returns of 1867 will be found in Appendices V. A.—1 to 3. The statistics are far from being reliable, as a whole, but in some localities a fair degree of accuracy has been attained, and measures are being taken for securing greater accuracy, especially in towns having Municipal Committees, who are empowered, under Act XV of 1867, to frame bye-laws for enforcing registration; but even in its present state

the system of registration has been found to be of great practical advantage, in calling the attention of the local authorities to places where exceptionally high rates of mortality prevail.

350. During the year under review, further measures for establishing a system of sanitary administration in the province have been taken, in— (1) the establishment of District and Municipal Boards of Health; (2) the formation of a Sanitary Fund; and (3) the appointment of a Sanitary Commissioner for the province, who is now engaged in organizing a more efficient system of mortuary registration.

351. The total number of deaths registered during the year 1867, was 3,12,708, being 1,22,017 more than were registered in 1866. Cholera accounts for 42,095 deaths of the excess. Excluding cholera deaths, there was still a general increase of mortality as compared with the year 1866. Calculated on the late census returns, the death rate was 18 per thousand; classifying the population into urban and rural, according to the old census returns (the new returns of urban population not being as yet available) the result is as follows:—

Urban,	27 per 1,000
Rural	18 per 1,000

The following is the death rate in the principal cities of the province:—

	<i>Population.</i>	<i>Per 1,000.</i>
Dehli,	1,54,417	37
Lahore,	83,177	29
Amritsar,	1,35,813	59
Peshawar,	55,558	47
Multan,	44,175	26
Ludiannah,	38,113	28
Jalandhur,	33,264	25

The deaths distributed according to *sexes* are as follows:—

Males,	1,69,371
Females,	1,43,337

or in the proportion of 100 males to 84 females. Classifying the people into Muhammadans and Hindus, including in the latter all non-Muhammadan races, the death rate was, in the case of Muhammadans 17 per thousand, and Hindus 18 per thousand.

Of the deaths, 291 are entered as *suicides*; 629 as deaths from snake bites; 121 from wild beasts; 21,298 from small pox; 43,146 from cholera; 1,73,681 from fever.

352. *Small pox.*—There has been a progressive decrease in the mortality from this disease since 1865, as will be perceived from the subjoined figures:—

1865,	66,221
1866,	27,802
1867,	21,298

This decline is attributed by the Sanitary Commissioner more to the nature of the epidemic, which has periods of quiescence and exacerbation,

than to the effects of vaccination, which is carried on at present on too small a scale to affect the returns to such an extent as is shown above.

353. *Cholera*.—The subjoined extracts from the Sanitary Commissioner's report will be of interest:—

“ The deaths from cholera were 43,146, as compared with 1,051 for 1866, and are 14 per cent of all deaths. Every district in the province suffered from it, but with various degrees of severity. Amritsar had the greatest number of deaths (3,561); and Kohat the highest death rate per *mille* from this disease (8·4). The Simla rate is only a decimal point short of the Kohat rate. It is strange to find Simla heading the cholera death rate of the province.

“ The rates were high in the following districts, viz:—

Hissar,	6·7	per <i>mille</i> .
Sirsa,	5·1	ditto.
Gurgaon,	4·5	ditto.
Hazara,	4·2	ditto.
Ferozepore,	4·0	ditto.

“ The lowest rate occurred in Jhung (0·3 per *mille*). The Gurdaspore return also shows a low rate (0·4 per *mille*); but there is reason to believe, that in that district many cholera deaths were reported as fever deaths, for the purpose of evading the preventive measures employed against cholera: the same source of fallacy affects the returns of other districts to some extent.

“ The Dera Ismail Khan rate (0·6 per *mille*) is low. It is worthy of note, that the Trans-Indus portion of this district escaped the epidemic altogether.

“ The ratio of cholera deaths per *mille* of population in the principal cities, was as follows:—

Kohat,	106·5
Peshawar,	24·7
Gujeranwala,	13·6
Amritsar,	10·9
Rawalpindi,	10·3
Dera Ghazi Khan, ..	9·7
Bannu,	8·2
Jhelum,	7·6
Ludiannah,	6·6
Gujerat,	6·2
Mozaffargurh,	5·7
Multan,	4·2
Lahore,	3·6
Hoshiarpore,	2·1
Hissar,	2·0
Dehli,	1·8
Ambala,	1·6
Jalandhur,	1·3
Sirsa,	0·8
Syalkot,	0·8

“ It is desirable that a brief outline of the facts, so far as they are known, bearing on the origin and diffusion of the great cholera epidemic which overspread the province, should be placed on record in connexion with the mortuary statistics of the year.

“ The Government of the Punjab, knowing that the annual fair at Hurdwar for April 1867 was to be a ‘ *Kumbh* fair,’ (the term *Kumbh* is applied to every 12th fair,) and that it was likely to be attended by vast multitudes of pilgrims from all parts of Hindustan and of the Punjab, and foreseeing the dangers likely to arise to the public health from so great a concourse of human beings, many of whom would be destitute and exhausted by the fatigues of a long journey, addressed the Government of the North-Western Provinces on the 28th January, drawing attention to the necessity of special precautions being taken with a view to the prevention of cholera or other contagious disease. Further, on the 13th March, a Circular was addressed to all Commissioners whose Divisions lay on the pilgrim routes, directing that all practicable measures should be taken for carrying out proper conservancy arrangements at the different pilgrim encampments, for preventing undue crowding, and securing ample supplies of good and wholesome water. Commissioners were further instructed to arrange that immediate information should be conveyed to them of the appearance of cholera, or any contagious disease among the pilgrims. In that event, measures were to be taken for preventing the entrance of the disease into towns and cities by the establishment of quarantine, and also for providing medical assistance for those attacked.

“ The Government of the North-Western Provinces organized a most perfect system of police, by which the greatest order was maintained, and the conservancy was so arranged that there was an entire absence of the ‘intolerable stench’ which was so much complained of in former years. The pilgrims were loud in their expressions of admiration of the systematic arrangements which afforded them so much comfort and security, and admitted of every one of them, no matter how feeble and helpless, having a bath in the holy Ganges on the great festival, a privilege for which thousands had travelled from the remotest parts of the province, and was only to be obtained in former years at great risk of life from being trampled under foot of the vast crowds pressing on in disorder to the sacred ghat. The pilgrims were everywhere most hearty in their expressions of gratitude for the care and forethought shown by the Government in providing for their safety and convenience.

“ The Punjab was believed to be entirely free of cholera before the fair, but the present returns indicate that the disease existed in the Dehli district in the month of March. The cases reported under that head are too numerous to be classed with the ordinary bowel complaints, of which a few appear in every monthly return as cases of cholera.

“ Between the 5th and 12th April, 19 cases had occurred at Bazpore, a village situated 60 miles east of Hurdwar. The disease was prevalent at Benares in March, and several cases occurred on the 24th March in the Jail near Allahabad : pilgrims from all those places attended the fair.

“ They began to assemble in the last days of March ; but the fair was “ not regularly open till the 3rd April. From that date till the 12th, the “ great bathing day, the roads from every quarter were blocked up for “ many miles with a solid mass of humanity journeying towards Hurdwar. “ The fair is believed to have been the largest ever held : a rumour had “ gone abroad that this would be the last of the *Kumbh* fairs, as before “ another 12 years elapsed the sanctity of the Ganges would have gone “ for ever. The report was very generally believed, and seems to have “ inspired vast multitudes with a frantic enthusiastic desire to participate “ in the last of a series of festivals which had been observed by countless “ generations of Hindus.

“ It is said that the number of pilgrims present on the 12th April was “ little short of three millions, and this estimate is believed to be a very “ close approximation to the truth. A rough census of the people was “ taken as they passed through the enclosures which were erected to break “ the multitude into fragments, and so lessen the dangers of crushing on “ their passage to the ghat.

“ This mass of people, nearly as numerous as the whole population “ of Scotland, more numerous than that of London, were collected on “ bare level sandy ground, and occupied a space of 25 square miles in the “ Hurdwar plain. The density of the population was 18 times greater “ than that of London ; the superficial space per head was 26 square yards.

“ The encampment was regularly sub-divided into streets and lanes, “ with shops, in which an amply supply of good food was provided, and “ merchandize of every kind exhibited. Water was obtained from the “ Ganges, or, in parts of the camp remote from the river, from pucca walls. “ The people lived in tents, or in neat picturesque grass huts.

“ The crowd rapidly increased till the great bathing day on the 12th, “ noon, after which it suddenly dispersed. By the morning of the 15th, “ the encampment had entirely disappeared.

“ There is a general concurrence of testimony that the health of the “ people was remarkably good up to the 11th April. Civil, Medical and “ Police officers all agree on this point, and say that up to that date there “ was no sickness. Three hospitals had been established in convenient “ situations for the sick, but the admissions were very few. From the 3rd “ to the 13th April there were 1,352 patients treated, of whom 19 died, “ two from diarrhoea ; but none from cholera. On the 9th there had been “ a slight case of cholera in a grass-cutter of the Cavalry detachment, and “ the police had previously reported four cases as such, but which were “ afterwards pronounced not to be so by Medical officers.

“ Several cases of undoubted cholera occurred on the evening of the “ 12th. On the following morning the pilgrims began to disperse, and the “ result has shown, that by that time every section of the great multitude “ had become contaminated with cholera, for each and every one of the “ streams of returning pilgrims had cases of the disease within one day’s “ journey from Hurdwar, and it clung to them till their arrival in their “ homes in the most distant parts of the province.

“ Dr. Murray, Inspector General of Hospitals Upper Provinces, has “ noted in a very instructive table the date of the first cases that occurred

“ along the pilgrim routes in the Punjab, distinguishing cases in pilgrims and in residents. The pilgrim cases take precedence in every case, and, with a few exceptions, the first cases among residents occurred in persons who had been in close contact with pilgrims. In no single instance did the disease appear in a station before the arrival of pilgrims. The facts leave no doubt of the transmissibility of the disease and of the pilgrims being the vehicle of its importation into the Punjab.

“ In addition to the measures taken for assisting the progress of the vast crowd of pestilent pilgrims through the province, and guarding its inhabitants from cholera contamination, described in the instructions given by Government to Commissioners, advantage was taken of the facilities for ablution afforded by the great rivers, in crossing which the pilgrims were required to wash their clothes and bodies; and in some places arrangements were made for boiling their clothes before allowing the pilgrims free intercourse with the resident population.

“ Although the measures adopted had not the effect of preventing an epidemic, there is good reason to believe that they retarded its appearance. The following table shows the deaths from cholera classified according to the position of districts, with reference to the great rivers. It further shows that the districts on the Hurdwar side of the Sutlej suffered much more severely than those on the north side, and, also, that the diffusion of the disease was comparatively slow and late in the latter. The early development of cholera in the Jalandhur Doab was probably caused by the transit of the great camp of His Highness the Maharajah of Kashmir.

“ *Table showing deaths from cholera, classified according to the position of districts, in reference to the great rivers.*

DISTRICTS.	Popula- tion.	CHOLERA DEATHS IN								Total cholera deaths.	Ratio of deaths per 10,000
		April.	May.	June.	July.	August.	September.	October.	November.		
South of Sutlej,	5,350,688	3,424	6,053	4,880	2,148	952	237	60	13	17,767	33
Between Sutlej and Beas,	2,460,802	609	1,194	593	284	320	265	96	7	3,368	13
Between Beas and Ravi,	3,654,271	208	496	1,132	2,524	1,768	1,269	688	42	8,127	22
North of Ravi,	4,991,364	38	435	1,697	2,732	3,277	1,988	117	204	10,438	21
Trans-Indus, excluding Peshawar,	1,131,460	...	1	159	769	806	816	282	55	2,888	25
TOTAL,	17,588,585	4,279	8,179	8,461	8,457	7,123	4,525	1,243	321	42,588	24

"It is satisfactory to find that the jails suffered so little from the epidemic; only 7 out of 26 jails had cases of cholera. At Rawalpindi the prisoners contracted the disease from the free-laborers with whom they were employed on the works at the Sohan bridge; and at Dera Ghazi Khan, also, the convicts being employed in building the new jail were constantly in contact with the free population, who were affected with cholera. There were 37 deaths altogether, of which it is worthy of note that 7 occurred in the small jail at Dharmsala. The cholera death rate of the free population at all towns where jails were attacked, was higher than that of the convicts, except in the Lahore Female Penitentiary and the Dharmsala jail."

354. Appendix V. A—3 gives the aggregate deaths from disease distributed monthly. September and October are the two most unhealthy months, February was the healthiest; but small pox was most fatal in May.

B.—Hospitals and Dispensaries.

355. DISPENSARIES.—It was stated in the last Administration Report that a Code of Rules had been issued with a view of placing dispensaries in the Punjab on a system of regulated grants-in-aid; in other words, of making Government assistance conditional upon the contribution of a certain proportion of the cost of these institutions from local sources, and that local committees of European and Native gentlemen had been appointed for the management of these institutions.

The beneficial results of the measure will be seen from the subjoined table:—

Year.	Number of Dispensaries.	Number of patients treated.	Income.	Contributions from Imperial revenues.	Contributions from Local Funds.	Contributions from private subscriptions.
1865	55	3,12,277	1,01,749	72,881	22,651	6,217
1866	69	3,77,754	1,40,419	78,839	40,453	19,760
1867	82	4,39,785	1,48,170	64,425	62,720	21,024

Thus, while the benefits of dispensaries have been largely extended, and no less than 27 new dispensaries established within the last three years, the revenues of the State have been *relieved* to the extent of Rs. 8,456, as compared with 1865, and of Rs. 14,413, as compared with 1866, and a large saving thus rendered available for making grants-in-aid to other dispensaries. Endeavors are now being made to establish, for each dispensary, an endowment fund, to be invested from time to time in Government securities, in order that it may become in time a permanent institution not dependent upon periodical charity for support.

The *Committees* are not all of them in complete working order, but in some cases they have afforded valuable aid; and in one instance, especially, a *new female ward* has been added to the dispensary from funds raised entirely through the exertions of the native members of the committee.

356. The gradual multiplication of these useful institutions is important, not only in a sanitary, but also in a *political* point of view; and nowhere is the *political* importance more striking than on the immediate frontier, where they constitute one of the best available means for conciliating and humanizing the lawless tribes beyond the border. Accordingly, for many years past, special encouragement has been given to the establishment of dispensaries in favourable localities on the north and west. At the present time there are ten dispensaries within easy reach of frontier tribes. At *Abbottabad* in the Hazara hills; at *Harripur* near *Torbela* on the Indus, the boundary between British territory and the tribes of Swat; at *Hoti Mardan* in Eusafzai; at *Peshawur*; at *Kohat*; at *Hangu*, and *Teri*, on the extreme north-west frontier; at *Kolachi*, near the Guleir pass of the Sulimani range; at *Dera Ghazi Khan* and *Rajanpūr*, on the south-west corner of the province; while at *Ladakh*, on the north-east frontier of Kashmir, a dispensary is opened for six months in the year, under the superintendence of the officer on special duty. *Thousands* of the members of the border tribes are thus enabled annually to participate in the benefits of European medical science: men from Swat, Bonair, Bajor, Badakshan, and even from Cabul; Momands, Shinwaris, Afridis from the Khybar Pass, Waziris, Povindah traders from Ghazni, and Belochis from the south-west, freely offer themselves as patients in our dispensaries, where they are not only treated, but, if necessary, *fed* at the public expense; some of them will come scores of miles to obtain medicine for a sick comrade, and all are ready if need be to submit themselves to the most difficult operations with perfect confidence. At *Ladakh*, the kind treatment experienced by some Yarkandis on their return from a pilgrimage to Mecca, so encouraged the traders of those parts, that at the end of 1867, a *kafila* of merchants came, for the *first time*, to open up commercial relations in British territory.

357. The extension of dispensaries in the province has been of late so rapid that great difficulty is beginning to be experienced in supplying them with efficient native medical officers. To meet this difficulty it was suggested to district officers, that young men might with advantage be sent to the Lahore Medical School, at the expense of Local or Municipal funds, to be trained in the English system of medicine, with a view to their future employment in connection with the dispensaries in their native towns or districts. The suggestion has been acted upon, and 29 youths, chiefly the sons of native practitioners, are now qualifying themselves for Native Doctors and Sub-Assistant Surgeons, in the Lahore Medical School, the cost of their education being borne by the funds of the district or municipality from which they are sent.

358. Lastly, with a view of counteracting the adverse influence of native *hakims*, who, however erroneous their principles of medicine may be, possess to a large extent the *confidence* of the native community, endeavors have been made, and in some districts with success, to make use of their

agency in distributing simple European medicines ; and in some cases they have been induced to allow their sons to serve as apprentices in dispensaries, and even to send them to be educated as Native Doctors in the Lahore Medical School.

359: **LAHORE MEDICAL SCHOOL HOSPITAL.**—The subjoined statement, showing the number of in-door and out-door patients, and the number of operations during the last five years, speaks well for the growing popularity of this institution :—

	1863.	1864.	1865.	1866.	1867.
In-door patients, ..	519	651	853	927	1,112
Out-door patients,..	8,480	9,195	11,023	14,059	14,186
Capital operations,	36	34	34	62	66
Minor operations,..	337	395	425	698	839

Its usefulness will soon be extended, seeing that, at length, a new hospital building, on a suitable scale, has been commenced.

360. Of the cases treated, 3,209 or 21·17 per cent were fever cases, 678 cases of diarrhœa and dysentery, 38 cholera, 92 phthisis, 1,154 chest diseases, 409 spleen, 201 urinary diseases, and 590 syphilitic diseases.

361. The cost of the institution was Rs. 5544-6-10, and was borne entirely by the Imperial revenues.

362. **STATISTICAL RETURNS.**—Returns in the form prescribed in the Statistical Committee's Return V. B. have been kindly furnished by the several Deputy Inspectors General of Hospitals, but they are so very voluminous that they have not been included among the Appendices of this report.

363. **LUNATIC ASYLUMS.** *Lahore Lunatic Asylum.*—The total number of admissions into the Lahore Asylum during 1867, was 143, of whom 75 were Hindus, and 78 Mahomedans ; and the daily average number of inmates was 224 ; 70 patients were discharged, and made over to their friends, and 70 died—of whom 30 were victims of cholera. Exclusive of these last, however, the rate of mortality was high—this has been attributed to the enervating effects of relapsing fever, which raged in the institution during 1866, as noticed in last year's report. It certainly cannot be attributed to inefficient diet, or deficiency of cubic space in wards, or neglect of conservancy arrangements.

364. *Dehli Lunatic Asylum.*—In the Asylum at Dehli, the lunatics admitted during the year numbered 28, the daily average strength being 20. The number of patients cured was 18, and there were 4 deaths. It is in contemplation to enlarge this institution, and to establish asylums at Rawalpindi and Multan ; and measures were taken, during the census taken on the night of January 10th, for ascertaining the number of lunatics in the province.

C.—Vaccination.

365. The special Vaccine establishment, under the superintendence of Doctor Garden, was employed chiefly in the Dehli and Rawalpindi districts. The result of the year's operations, compared with that of 1866, is shown in the following table :—

		Successful.	Unsuccessful.	Doubtful.	Re-vaccinated.	Unknown.	Total.
Vaccinations performed by Punjab Vaccine Establishment.	1866,	151,244	5,078	3,305	2,336	137	162,100
	1867,	126,402	3,960	2,667	1,220	571	134,820
Vaccinations performed by Civil Surgeons and Vaccinators attached to Dispensaries.	1866,	61,735	13,706	7,939	1,244	1,370	85,994
	1867,	42,345	9,894	6,340	2,140	1,027	61,746
Total, ...	1866,	212,979	18,784	11,244	3,580	1,507	248,094
	1867,	168,747	13,854	9,007	3,360	1,598	196,566

Thus, of the cases vaccinated by the Punjab Vaccine Establishment, 95·01 per cent were successful, against 94·74 in 1866 ; and of those vaccinated at dispensaries, the per-centage of successful cases in 1867 and 1866, were 75·7 and 72·3 respectively.

366. The falling off in the number of persons vaccinated by the regular Vaccine establishment is attributed by the Superintendent General of Vaccination to the difficulty of supervising operations in the Rawalpindi district, (in which he was employed during the greater portion of the year) on account of its large size, and the sparseness of its population ; and that in the number of operations performed at dispensaries, to the fact that several dispensaries have been relieved of their vaccinators, their places being supplied by men from the regular Vaccine establishment.

367. Opposition to vaccination still exists in some of the large cities of the Punjab ; but in the rural districts its advantages are becoming more known and appreciated by the people. Favorable accounts continue to be received from the city of Amritsar of the experiment of encouraging native physicians to practise on their own account ; and the system has to some extent been introduced in parts of the Syalkot district.

368. It is satisfactory to observe that small-pox is not so prevalent in the Punjab as formerly, and the Superintendent General remarks that “ in the several districts where the establishment has worked, it has not in one

“ instance spread throughout the district, as was almost invariably the case “ formerly.”

369. The cost of the Vaccine Department in the Punjab is as follows :—

	<i>Rs. per annum.</i>
Superintendent General,	„ 12,600
Native Superintendents and Vaccinators,	„ 37,400
Vaccinators attached to Dispensaries,	„ 6,000
	<hr/>
Total per annum,	„ 56,000

370. Appendix V. C. gives the information prescribed in the Statistical Committee's return, so far as this was possible.

PART VI.

MISCELLANEOUS.

Post Office.

371. DISTRICT POST.—The following statement shows the extent to which the district post was employed during the past four years :—

YEAR.	SENT TO AND RECEIVED FROM DISTRICT POST.		Per-centage undelivered.
	Letters.	Newspapers.	
1864-65,	904,921	5,630	11·16
1865-66,	854,991	7,946	8·80
1866-67,	692,113	11,936	8·08
1867-68,	637,775	9,646	10·66

Of the total number of letters carried by the district post in 1867-68, 109,382 were on the public service; and of the newspapers, 3,134 were also on the public service.

The decrease in the number of covers sent through the district post during the past two years, is mainly due to the fact that many new Imperial post offices have been opened during those two years in rural

localities, the duties of which are performed by the Imperial postal establishments, and not by those of the district post. In 1867-68, 54 such Imperial rural post offices were opened.

372. The control of the district post was, with the concurrence of the Director General of the Post Office in India, transferred, on the 1st November 1867, from the Financial Commissioner, (under whose supervision it had been since the abolition of the office of Judicial Commissioner in the early part of 1866) to the Post Master General, Punjab and Sind, who is preparing a general scheme for the improvement of district postal arrangements.

By order of the Hon'ble the Lieutenant Governor,

T. H. THORNTON,

Secretary to Government, Punjab.

B.—Palampore Fair.

A.

Progress made in Tea Planting in the Kangra Valley.

COPY of a memorandum from T. D. Forsyth, Esquire, Additional Financial Commissioner, Punjab, to C. U. Aitchison, Esquire, Officiating Secretary to Government, Punjab.—Dated 1st February, 1868.

The Secretary to Government having called for a report on the progress made in the Kangra Valley in connection with the subjects mentioned in Sir R. Montgomery's minute upon the state and prospects of tea planting, dated 13th December, 1864, I submit the following remarks:—

2. The accompanying statement, compiled in the Settlement department, shows the extent of land occupied by Planters, European and Native.

3. The total area has not much increased since 1864—at least so far as regards European plantations—as the landed proprietors have exhibited a very decided aversion to parting with an acre of ground, and all the efforts of the Government officials to induce them to do so have failed. It is not that the Planters have behaved in any way calculated to give offence to the people; for it is a remarkable fact, of which these English settlers may feel proud, that hitherto they have secured the good will, and in many instances the hearty attachment, of the Zemindars, who frequently flock to some of the Planters to seek advice and help in domestic trouble, or when involved in litigation.

4. The creation and maintenance of such a good understanding between settlers and the old inhabitants is at the bottom of all future success: with it, Planters are able to obtain manure for their fields, workmen for their plantations, and supplies for their table: without it, there is enough difficulty in the matter of labor alone to ruin all the plantations in the valley.

5. As regards the difficulty in obtaining more land, it is perhaps as well that for the present more settlers should not come into the valley until the facilities of communication are such as to enable the proprietors to import laborers from other parts. I propose to dwell on this subject before proceeding to notice the other points alluded to in Sir R. Montgomery's minute.

6. The circumstances of the Kangra Rajpoots are well known to His Honor. They are a proud race, disdaining to touch the plough, and thus they require to have a number of laborers on their lands. But they do not object to the easy duty of looking after plantations, and even manipulating the tea, and thus it has come about that these high caste Rajpoots are much employed as Overseers and Superintendents in the factories, and bring a number of laborers to work in the plantations. These men are averse to going any great distance from their homes, and

for the present are content to receive moderate wages, *viz.*, four rupees per mensem for common laborers.

But it requires the constant watchfulness of the authorities to prevent great injury occurring by the sudden disturbances of the labor market.

7. Any great demand for labor, where the supply is limited and inelastic, is productive of great inconvenience and loss to the Planters. The system of forced labor for repairs of roads has only just been put an end to—if indeed it has entirely ceased. This was a crying evil.

8. Scarcely less grievous to the Planters was the system of competition which had sprung up between the different departments of works,—so that workmen, who were employed on one job, would be enticed by the offer of higher wages to another work, and so on to a third, till at last the rate of wages became quadrupled.

9. The case shortly stated stood thus :—The supply of labor being a fixed quantity, it was very evident that, if the demand exceeded that supply, either the requisite labor should be sought for elsewhere, or else some work must suffer. Unfortunately it has been once or twice the case that the Government works, which being constructed for the good of the people may be considered of the utmost importance, have been pushed forward by means of raising the rates, and so drawing away the laborers from the plantations. The Planters very speedily made known this real grievance, which was at once remedied.

10. Thus this difficulty has been for the time satisfactorily arranged ; and it is to be hoped that ere long the completion of the new roads will release a large number of men who are now compelled to act as porters, besides setting free all the workmen on the roads, who will then have to seek their livelihood in the plantations and elsewhere.

11. It is not necessary to dwell upon the question of the manufacture or the quality of the teas, as in all this no aid is sought from Government.

12. The next subject to be considered is, how to get the teas out of the plantations to market, and which are the best markets.

1st.—Regarding the construction of a road suitable for carts to the plains.

The Lieutenant-Governor has sanctioned the construction of a broad road throughout the length of the valley. The orders originally were for it to commence from Noorpore, but I believe His Honor has now been pleased to render it complete by commencing from Patankote, and throwing a bridge over the river Chukkee, which is essential in order to make the road fit for cart traffic throughout the year.

The entire length of road from Patankote to Baijnath is about 82 miles, of which the portion between Noorpore and Palampore is now being taken in hand.

In order to give immediate relief to the Planters, it was determined to open out the upper part of the road first, and to connect the tea plantations with the Dhurmsala and Hoshiarpore cart road. With this in view, Lieutenant Browne, Executive Engineer in charge, has commenced to throw bridges with brick arches over the Nigol and Baneir streams, and it is reasonably expected that the Planters will be able to send their teas to the plains in carts, *via* Kangra and Hoshiarpore, next winter.

A more detailed report on the progress of this road will doubtless be called for through the Engineer department, if required.

13. The next subject is the public buildings asked for and sanctioned by Sir Robert Montgomery. These were a Rest House, Post Office, Dāk Bungalow and Dispensary; and it was proposed by the Lieutenant-Governor to make the revenue collections of Kullu and the Sub-Collectorate of Bhowarna available at Holta, if it could be done without additional expense to the State.

These orders were commenced to be acted upon in 1866, when Major Cracroft, then Deputy Commissioner, Kangra, first pointed out the site, which was approved by the Planters, and has since become known as Palampore. His Honor the Lieutenant-Governor has sanctioned the erection of the buildings named in the margin, of which the Dāk Bungalow, Circuit House and Post Office have been built, and the Dispensary and Tahsil are in course of construction. The Police Station has been provisionally sanctioned, and will be commenced so soon as funds are provided.

Circuit House.
Dāk Bungalow.
Dispensary.
Naib Tahsildaree.
Police Station.
Post Office.

14. It is scarcely necessary to allude in passing to the advantages to the Planters arising from having a small market town in their neighbourhood, where supplies can be easily procured, and where a general rendezvous is obtained.

15. The great inconvenience to which they were formerly subjected by having to go several miles to the nearest market place, and the disadvantage and positive loss caused by the frequent absence of their laborers and followers at the Sub-Collectorate at Bhowarna, cause the Planters to appreciate greatly the transfer of the Tahsil establishment to Palampore.

16. It is said by some that there has been a slight enhancement of prices in consequence of the Fair and the influx of visitors to Palampore, but the majority of the Planters look upon this as a very small matter compared with the advantages derived from the establishment of a local market, and they have repeatedly expressed their gratitude for the efforts which have been made to meet their wishes. It is only right that I should here make known their high appreciation of the aid rendered to them by Major Cracroft whilst he was Deputy Commissioner of the district.

17. With regard to the proposal to make the revenue collections available at Palampore, and the measures taken to accommodate Planters in cashing Bills and Currency Notes, it was proposed to open a

Sub-Collectorate Treasury at Palampore ; but this was objected to on the score of expense. If, however, funds could be obtained—as perhaps they may now be—by the abolition of any Tahsil Treasuries throughout the Province, I would decidedly advocate the establishment of a Small Treasury at Palampore. At present the arrangements made by me privately are for the Agent of Seth Huneer Mull to open a branch establishment at that place, and he transacts a very fair business in discounting Hoondees and cashing Notes for the Planters, whose yearly requirements come to about one lakh. At one time it was suggested to them that they should club together and defray the cost of extra establishment. But this met with no response, chiefly because they felt disinclined to pay for Government establishments. They desire greatly to have a Treasury opened, for it would save them all the discount they now have to pay, and I advocate compliance with their wishes, for the extra cost to the Imperial Revenues would be exceedingly small, and if I am right in my surmise regarding the abolition of some Tahsil Treasuries, it need be none at all, whereas the boon to the Planters will be very great.

19. The establishment of a British Agent at Ladakh, which was the last topic broached by the Planters to Sir R. Montgomery, opens out such a wide field for comment, and has been so fully and frequently discussed, that I need only remark here that the presence of Doctor Cayley at Leh, and the reduction of duties in Ladakh, though tea was always exempt, have given a great impetus to trade generally, and one direct result of the Palampore Fair has been to make traders from Yarkund and Cabool and all parts acquainted with the Kangra tea plantations, and already purchases have been made at good prices for foreign markets, as well as for consumption in the Punjab. Thus it is hoped that a good, if not the best, market for the Planters may be found at their own door, and this is what is desired.

20. The following extracts from a report made by Major Paske on the Cinchona and China Grass plantations and on the Slate quarries are given as relating to the enterprise of British settlers in the Kangra Valley.

B.**Palampore Fair.**

Copy of a letter, No. 82, dated 6th May, 1867, from T. D. Forsyth, Esquire, C. B., Commissioner and Superintendent, Jullundhur Division, to J. A. E. Miller, Esquire, Secretary to Financial Commissioner, Punjab.

It has occurred to me that the efforts which we have been making for the last year to improve the trade between the plains of India and the trans-Himalayan countries would be considerably facilitated if we could establish a large fair in some convenient locality, and I have now fixed upon Palampore as the best place.

2. It is to be the terminus of the new cart road, now being rapidly constructed from the plains. It is in the heart of our only European colony in the centre of the Tea districts, and on the high road to Koolloo and Ladakh; water and grass are to be had in abundance; and on the spur running down from Palampore to Bhowarna there is ample ground for accommodating any number of people.

3. Moreover, the natives of Palam are yearly in want of cattle, and have to go to Suket, six days' journey off, to the nearest Cattle Fair, and it would be a great boon to them if a cattle market were established in their valley. The chief traders of the district have promised their support, and merchants from Umritsur and Jullundhur have agreed to send goods.

4. I propose then to hold a fair at Palampore in the autumn, fixing it about 10 days after the fair held at Sultanpore, in Koolloo, so as to allow all the Lahoul and Ladakh traders to visit that fair first and then come on here.

5. The following articles and animals I expect to collect in the market from the hills:—

Yarkund	} Ponies.
Lahoul	
Spiti	
Plough bullocks.				
Hill cows.				
Guddee and Koolloo sheep.				
Goats.				
Changthan wool.				
Guddee and Koolloo wool.				
Pushum.				
Blankets and woollen cloths.				
Iron.				
Borax.				
Churrus.				
Tea, black and green.				
Hemp, &c., &c.				

6. I propose giving the following prizes:—

	1st prize.	2nd prize.
For the best pony (horse)	Rs. 25	Rs. 10
Do. do. (mare)	„ 25	„ 10
Do. milk cow	„ 20	„ 10
Do. plough bullock	„ 20	„ 10
Do. sheep (ewe)	„ 5	„ 2
Do. do. (ram)	„ 6	„ 3
For best sample of wool, per maund	„ 10	„ 5
Do. Pushum, do.	„ 10	„ 5
Woollen cloths, Rs. 25 in different prizes, as may be determined upon.		

Blankets, &c., Rs. 10 in all.

<i>Bonâ-fide</i> native growth	{ For best sample of tea, per maund, Rs. 20	Rs. 10
and manufacture ..	{ Green do. do. .. „ 20	„ 10
	Hemp do. ... „ 5	„ 20

Other prizes may perhaps be given.

7. This district and its adjacent provinces are teeming rich in products of all kinds; but hitherto its resources have not been developed as they ought to be, and will be in time to a certain extent. The Sultanpore fair, which is of ancient institution, has done good, and I shall do my best to encourage it still more; but it is in a remote corner; whereas when the road over the Bubboo pass is completed and the distance is thus shortened by two marches, we may expect all the hill traders to come as far as the Palam Valley, there to be met by merchants from the plains, who will have no reluctance to take their goods wherever carts and camels can penetrate. Perhaps I may be too much disposed to magnify local interests, but it appears to me that, next to a large fair on the frontier, there could be none of greater importance than one intended to stimulate the trade with the countries north of the Himalayas; and having visited the Sultanpore and Rampore fairs, I have little doubt in my own mind that one established at Palampore would far surpass either of the others in the value of goods exchanged and in the importance of the results to trade generally. I trust therefore that the Government may be pleased to consider favorably this proposal and to lend its countenance to a project which is not merely of local but even of imperial importance.

8. As no provision for this fair has been made in the Budget, I trust that Rs. 500 may be allotted from the Financial Commissioner's Reserve Fund. I do not propose to impose any fees for the first three years, so as to give every encouragement to the people to frequent it.

Copy of a letter, No. 2451, dated 23rd May, 1867, from J. A. E. Miller, Esquire, Secretary to Financial Commissioner, Punjab, to T. D. Forsyth, Esquire, C. B., Commissioner and Superintendent, Jullundhar Division.

In reply to your No. 82, dated 6th May, I am directed to state that

your proposal to establish a fair at Palampore meets the Financial Commissioner's entire approval.

Copy of a letter from T. D. Forsyth, C. B., Commissioner and Superintendent, Jullundhur Division, to J. A. E. Miller, Esquire, Secretary to Financial Commissioner, Punjab.—No. 246, dated Lahore, 12th November, 1867.

In submitting a report on the Fair which has just been held for the first time at Palampore in the Kangra district, I venture to lay before the Government a detailed account of the objects which were held in view, and the reasons which induced us to hope for success, as well as the ground of selecting Palampore as the site.

2. The objects in view were two-fold : first, to develop the local trade, which promised to be capable of great expansion ; and, second, to open out commercial relations with the trans-Himalayan Provinces, which are known under the general term of Central Asia.

3. The Kangra district abounds in varied and valuable products. From the valley rice is exported to the extent of upwards of two and a half lakhs of rupees annually. Sugar is grown of such excellent quality that it is exported to the sugar-growing country of the plains. Hemp is produced of the very finest quality, and, when compared with the Russian fibre was found to surpass it in strength and general qualities. A report furnished by the East India House in 1854 shewed that, whereas Russian hemp broke under a pressure of 160 lbs., Kangra hemp stood a pressure of 240 lbs. Iron is produced from the mountains equal to the finest Swedish kind. Tea has been successfully cultivated by both Englishmen and Natives. Cinchona is being introduced. China Grass has been planted. Borax is imported from Ladakh. Wool is brought in large quantities from the sheep which graze over the pasture grounds of Koolloo, Lahoul, and Spitee; and woollen blankets of the finest description are manufactured by the inhabitants of those parts, who, however, have hitherto been unable to obtain any good market for their textures.

4. Looking at the fair solely as a local institution, the products are sufficiently valuable to warrant our efforts to promote the extension of our commerce.

5. The result has shewn that a large demand exists for woollen fabrics, all that the hill people brought down being bought up at once at double their usual value by purchasers who eagerly sought for more, and in return an equally brisk trade in brass vessels and piece goods was done by the traders from the plains.

6. As it was confessedly an experiment, the traders openly acknowledged that they only brought samples of goods, and those not always of the finest quality. But the prices they received and the demand they found to exist opened their eyes to the importance of bringing a large supply next year ; and as an entrepôt of local commerce I think we may consider the Palampore fair to be fairly established, the returns shewing

that something like two lakhs of rupees worth of goods changed hands during the few days the fair lasted.

7. I propose to return to this part of the subject again, but now will turn to the other and far more important object in view, *viz.*, the establishment on some secure basis of commercial relations between India and the countries of Central Asia.

8. The Report on Trade furnished in 1863 by Mr. R. H. Davies, Secretary to Government, so fully and ably treats on every branch of this subject, that I do not venture to travel over ground already occupied by him. But I propose to supplement that report by a brief sketch of what has occurred since then, and of the steps which have been taken to improve trade.

9. At the time when Mr. Davies's report was written, Yarkund and the countries of Turkistan, such as Khoten, Kasghar, Aksoo, Turfan, were in the hands of the Chinese, and were so hopelessly closed to our traders that any one connected with this Division ten or fifteen years ago, who had not closely watched the course of events since then, would doubtless be wholly disinclined to believe in the possibility of any reform being effected in that direction. A feeling of despair seemed to pervade the minds of traders whenever the subject was broached, and the severe and repeated losses to which they had been obliged to submit rendered the very mention of Yarkund and its trade most unpalatable to them. Such being the case with those most interested pecuniarily in the matter, it is not surprising that the authorities did not move in the matter, and though there were frequent complaints of exactions on the part of the Ladakh officials, of which Mr. Davies's report affords ample proof, the trade seemed to be so well-nigh extinct, that the fact that British subjects in Lahoul were paying annual tribute to the Maharaja of Cashmere for the doubtful privilege of being allowed to enter the Leh market on payment of a double duty compared with that taken from traders from other parts did not excite the attention it would otherwise have received.

10. Within the last three or four years, however, a great change has come over Central Asia. The Moghul inhabitants of the provinces of Yarkund, Khoten, Kasghar, &c., who had on many occasions risen ineffectually against the Chinese rule, succeeded at last in throwing off the foreign yoke, and by degrees after much internal dissension, some sign of a powerful Government may be discerned in the rule which Yacoob Khoosh Beguee has imposed on all the Mahomedan countries east of the Tian Shan Range.

11. Simultaneous with the overthrow of the Chinese rule has been the advance of the Russians up the Syr Darya, thus causing dread to the Asiatic States lest they should fall under the conqueror's power, and spreading alarm amongst English merchants lest the Russian advance should completely drive our goods out of the Asiatic market. Out of these alarms I venture to remark that the utmost benefit may arise to our trade.

12. In the first place, it has led us to enquire whether it be true that Russia can compete with us in trade with Central Asia, supposing the road to be equally open to both. As I have been at some pains to solve this question, and for this purpose visited the Nijni Novogrod Fair in 1864, and in 1866 made my enquiries in Lahoul at the other end of the line, I venture to add my mite to the general opinion that when once we are able to obtain an entrance to the Central Asian market, we are certain of competing successfully with the Russian merchants.

13. I might enlarge on this subject, but I believe it is now unnecessary.

14. The next point then in our favor is that fear of Russia induces these weak Mahomedan States to look to us as a friendly power, and though there may be perfect reasons for our declining to interfere in their political quarrels, there is equally good reason for our seizing the opportunity to further our commercial prosperity.

15. On this subject, as I am primarily responsible for having urged lately the appointment of a British Agent at Leh and opening out this trade, I trust I may be allowed to make a few remarks *in extenso*.

16. The impression which all my enquiries had left on my mind was that the trade with Central Asia was worth seeking, and that by a little effort on our part we might secure it. It was impossible, however, at the outset to predicate what would be the feelings of the people themselves, and we could only form our opinion on the direction of the current from such straws as were thrown out from time to time. The very decided opinion of the traders in Lahoul and Kooloo was to the effect that the Yarkund and Khoten people would gladly trade with us if they could, and the embassies sent from those parts of late years betokened a friendly feeling, which it appeared desirable to encourage.

17. The Khan of Khoten especially had evinced a friendly disposition, and, relying on this, as well as on the strong probability that, at this present juncture in Central Asian affairs, any properly appointed embassy from the British Government would receive proper treatment,—for however much the people might be torn by private dissension, they are all ready to unite in common cause whilst the fear of the Russian advance has hold of them,—I ventured to urge upon the Government the advisability of sending up some embassy, and I trust that my having volunteered to undertake the duty may be accepted as an earnest of the honesty of my intentions, and may protect me from the imputation of rashness. It may be said that the result has shewn how very dangerous such a mission would have proved. But the conclusion I have drawn from the events which have occurred, when taken altogether, is, that there would have been no such danger, because Yacoob Khoosh Begee has shewn the utmost desire to encourage intercourse with the English, and he would not have injured his own cause by harming any English trader, much less an English officer duly accredited.

18. However, it is unnecessary to pursue this subject, for events have taken such a fortunate turn that what appeared to be a work of difficulty has been accomplished as it were at a leap.

19. My object in proposing to visit Khoten and Yarkund was in order to ascertain by personal examination the state of trade in those parts, and to learn what kind of goods were required from us, and then to induce the people to trade with us. It may be said that trade should be left to take care of itself, and that all such official and extraordinary help as I proposed to give was based on wrong principles. But I will give my reasons, and leave others to judge whether they are correct.

20. The people of Turkistan at present get goods from Russia of an inferior quality, and having been accustomed to look only to that market, they would not at first think whether they could be supplied better and cheaper from India. When I consulted our merchants here on the subject, their ready answer was—"The people of Central Asia get all their broad cloths &c., from Russia," and this they considered enough. But when I asked if the broad cloth was equal to ours, they answered as readily—"No; but then how can you get your cloths there?" I then pointed out the advisability of opening out this route, whereupon several traders told me the idea was hopeless, unless two objects should be secured: first the Cashmere exactions should be abolished; and, second the Government should enter into some arrangement with Yarkund and the authorities of those parts to keep the road open.

21. The fact that Government had consented to send an Agent to Leh as an experiment seemed to be a most encouraging sign, and induced me to hope that the first object desired by the trader might be secured; and relying on the effect this would have, as well as on the general impression that the people of Central Asia would not be averse to trade with us, I ventured to send notifications of the fair into Yarkund and Khoten.

The result I give in Dr. Cayley's own words:—

Extract from Dr. Cayley's letter, dated Leh, 28th September.

"The Central Asian merchants are flocking in fast, and nearly all of them men who had never been in this direction, but came in consequence of having heard from some Mecca pilgrims who were at Leh on my arrival of my being here, and that traders would be well treated and duties reduced. They all say that next year the merchants from Kasghar, Aksu, Turfan, and all the cities in those regions will come this way to the Punjab, in preference to going anywhere else; and there is hardly any limit to the trade if only transit duties are lowered. Many of the merchants now come had seen the notices of and heard about the fair from the Kokand Envoy, who returned a few weeks ago, and to whom I have explained all about it, and they mean to go on to Palampore. As nothing is said in any of the tables of duties of what is to be levied on goods passing in transit unopened through Ladakh, I have insisted that not more than 5 per cent *ad valorem* shall be charged pending reference to Government. The authorities here want to charge 25 per cent. The

“traders have all come in the full belief that the duties are lessened; and
“if they find themselves deceived, they will never come again.”

22. Now the question still remains—Is the trade worth seeking? It is impossible to give an answer at this early stage, but there is every hope for a vast increase of any commerce which has existed at all under the severe and almost stifling burden of a 30 per cent transit duty.

23. I would, however, point to the view of the question taken by the Russians, or rather by an able writer on the Russian tea trade question, in a review which appeared in the *Evening Mail* of the 18th September last.

24. From that review it would appear not only that the Russians are prepared to be out-stripped by us in commerce, but that we should directly benefit a vast tea drinking population by opening out the Himalayan tea districts by the Central Asian route to Russia.

25. I now come to a consideration of the different routes to Turkistan, and the reasons for selecting Palampore for a fair, and the steps which have been taken for removing obstacles.

26. There are several routes to Turkistan from India. “The most western route”—I quote from a recent account published—“by the Swat and Chitral valleys” has been described by Colonel Gardiner and Major James as the most direct, though perhaps the most difficult; and considering the hostility and variety of tribes who would have to be encountered and bought over, it would be unwise at present to offer such a temptation to their cupidity as would be given by the passage of a band of merchants through their borders. The most eastern route is thus described by a writer in the *Times*:—“There is an old and really good road, with wood, “water, and provisions at every station, and paved in the time of the “Moghul Emperors, practicable for wheeled carriages throughout the “year, and which leads through a pass in the Kuen-Lin chain, far to the “east of Cashmere, straight down to the North-West Provinces, and thus “opens this vast region of Chinese Turkistan to British commerce in the “safest and most desirable way. This road goes over the Niti pass and “comes out into Rohilkund, but though it undoubtedly is the easiest and “shortest way to the highlands north of the Himalayas, it brings us into “Chinese territory, all progress through which is jealously watched and “prohibited. Traders from Hindoostan are allowed to go as far as “Rudokh at a certain season of the year, but they must go by a particular “line, at a particular time, and are not allowed to advance one step beyond;—so that not much advantage is to be gained from the road being “wooded and paved. Beyond Rudokh the road passes through wilds “where wood and water are scarce, and thieves abound. The third, and at “present only practicable, line from Yarkund and Khoten is through “Ladakh, and here there is a choice of two routes,—one over the Khara “Korum Pass to Leh and so down to Sreenuggur, or direct to Lahoul and “Koolloo; the other route skirts the Kuen-Lin range to the east, passing “by Changchemoo, Panggong Lake, Pooga, cutting across an angle of “Ladakh territory, and coming down by the Bara Lacha Pass to Lahoul “and Koolloo. Another route bifurcates from the Panggong Lake

" through Spittee to Rampore, Bussahir, and comes down the Hindoostan and Thibet road to Simla. But until our relations with China are improved, and we are allowed free access to Rudokh and Gartope, the Hindoostan and Thibet road will remain useless."

27. Assuming then the route between Yarkund or Khoten and the Punjab to be the only feasible one, we have a choice of two great lines,—one from Leh through Cashmere to the plains; the other through Lahoul, Koolloo, and Kangra. Undoubtedly, if Cashmere were a British province, there are certain advantages in adopting that route, for the mountain passes between Leh and Sreenuggur are lower than those which divide Ladakh from Lahoul. But even here there are counterbalancing advantages on the Lahoul line; and comparing the two lines, as they are at present to be viewed politically, there is everything in favor of the Lahoul line.

28. In the first place, our base of operations is far more advanced on the Lahoul than on any other line. British territory runs up to the Lingtee river within seven marches of Leh, and thus we can ensure traders from exaction so far, and can give them all the advantage of good roads, which latter boon we are not likely to see granted by the ruler of a Native State; and though our traders may be exempted from heavy transit duties, I doubt their escaping entirely from exaction throughout the whole line from Leh to the Punjab *viâ* Cashmere.

29. The construction of a cart road to the end of the Kangra valley is another great help to trade by that line.

30. Some consideration too may be given to the fact of our districts being tapped by this route, and it would make a material difference to the tea merchants whether they took their consignments direct by Koolloo and Lahoul to the Yarkund market or went round by the circuitous, and consequently expensive, route of Cashmere.

31. Having then assumed this to be the best line, Palampore was selected as the most favorable spot for the fair. First, because it is the head quarters of the English colony in the Punjab, where European skill, energy, and capital have been brought to bear on a fertile soil, and have caused the production of Tea, Cinchona, and China Grass to pass from an experiment to a fact. Second, it is almost the farthest point to which wheeled traffic will be able to travel along the new road now being completed, and therefore it would be a convenient spot at which to break bulk, and make up goods into convenient packages for carriage by mules or porters. Third, it is not too far removed from the upper hills to render it objectionable on the score of heat to the mountaineers who bring their woollen fabrics for sale, and by whom the heat of the plains is much dreaded. Fourth, there is ample ground, good water, and abundance of supplies.

32. Kangra or other places might have been selected, but they are open to this objection amongst others, that the traders from the north would have to bring their goods by their expensive mode of hill carriage

so much farther, as they would not change their conveyance at Palampore. Moreover, there is no available ground at Kangra, and every step further down the valley taken by a hill trader is considered a grievance.

33. I will briefly relate what steps have been taken to remove the obstacles to trade on this line. The first boon was the abolition of the tribute hitherto paid by the Lahoulees to the Maharaja of Cashmere. Next, the appointment of Dr. Cayley to Leh satisfied the minds of the traders that their interests would be attended to, and it is fitting that I should make known the lively gratitude of all classes of merchants to him for the marvellous benefits which he has conferred on them by his firm yet conciliating manner in overcoming the difficulties with which he had to contend.

34. The abolition of the enormous transit duty of 30 per cent on goods coming from Yarkund has caused the utmost satisfaction; and the appearance of Turfan wool at the Palampore fair was hailed as something little short of a miracle by the shawl-merchants, who exclaimed on seeing it that it was the first time it had been seen in the Punjab for some 300 years. The importance of introducing this, which is the finest of all shawl wool, to our Amritsar factories will be fully appreciated by the Government when we recollect how sadly the shawl trade was depreciated a short time ago by the introduction of Kermanee wool, the excuse for which was that the better kind of wool could not be got from Cashmere. Now that transit duties are lowered, and wool from Turfan is allowed to pass through the Cashmere territory to the Punjab, we may hope to see the Amritsar shawl trade improve.

35. The difficulties of the road, which six or seven years ago were exceedingly great, have been materially lessened.

36. In Colonel Lake's time, and under the orders of Sir Robert Montgomery, a substantial bridge was thrown over the Chundra River at Koksar, and a bridle path was cut across the Rotang Pass. During the past year further improvements have been made in removing large masses of rock and easing the ascent of the Bara Lacha pass and elsewhere.

37. This side the Rotang Pass a very decided improvement has been commenced in opening out a new and direct route to Koolloo, over the Buboo pass, towards which the Raja of Munde, through whose territory the road passes, has contributed a large sum of money, and, moreover, has further aided trade by abolishing all transit duty on goods passing over his bridges.

38. It is now proposed to erect houses of refuge on the Rotang and Bara Lacha passes, and then the road may be considered to be complete for all mule and pony traffic.

39. I have now to detail the arrangements made for and the result of the fair.

40. As it was a matter of importance to create a widely local interest in its establishment, I invited the Rajas of Mundee, Sooket, and Belaspore to attend. Traders from all these States brought goods to the fair, and Wuzeer Goshoon was conspicuous in the display of Iron, Salt, Wool, Churru, &c., in which he has for years carried on a lucrative trade. All the petty Rajas of the Kangra district were assembled.

40. For the accommodation of traders, supplies of wood and grass were collected, and upwards of 100 wooden booths were erected, which were rented to tenants at remunerative rates.

41. Palampore is quite a recently created village. Eighteen months ago there was not a hut or inhabitant, and it was after much discussion that the few public buildings now established were sanctioned.

42. Grave doubts were entertained by the Financial Commissioner whether it were possible to get up a bazaar. This operated unquestionably somewhat unfavorably, and the rise of the place was to a certain extent checked; and as people were incredulous as to the success of the fair, very little was done till within a week or two of its commencement towards preparing accommodation. But the weather fortunately was most propitious, and as the traders rapidly erected booths for themselves, no inconvenience was experienced by any one.

43. As many of the traders had come to the fair in great incertitude regarding the demand and supply, it was determined to award small douceurs to all who had displayed great public spirit in coming from any distance or bringing a good array of merchandise.

44. And as I had received the orders of Government to make known to the assembled traders that the appointment of Agent to Leh was to be permanent, at all events for some time to come, it was arranged to hold a meeting of all the Rajas and chief traders, which accordingly took place on Saturday the 3rd November at noon. There was a large assemblage of English gentlemen and ladies, and we were honored by the presence of the Hon'ble G. N. Taylor, who was good enough to take an interest in all the proceedings. I took occasion to explain to the people then assembled the objects of the fair, after which prizes were distributed, and the company separated. What subsequently occurred in the way of entertainment was a purely private matter and need not here be touched upon.

45. The total cost of the fair to the funds of the province may be put at Rs. 1,200, for which the accounts will be submitted in the usual manner. This I trust will not be considered a large sum, considering the objects to be attained.

46. In addition to the prizes and rewards given by the Government, many of the chiefs and gentry present joined in a subscription, which was purely voluntary, and with which I only concerned myself so far as to request that Rs. 100 might be put as a limit for the amount to be given by any one person—to which nearly all agreed. In this way a sum of

Rs. 1,705 was collected for delivery to traders and others in rewards. As many merchants came from Mundee, Sooket, Bilaspore, Nadown, and Seeba, I trust that the grant of rewards to them by their own chiefs may not be considered objectionable. In all other respects contributions from Rajahs were declined.

47. It was difficult to ascertain correctly the value of goods brought to or sold at the fair, owing to the wild rumours which were spread, as always are spread on the institution of anything new.

48. For the first few days not a female was to be seen at Palampore, because a report got abroad that the fair was merely a ruse to get women together, when they would all be carried off to be married to European soldiers. This materially affected the dealers in beads, and such like ornaments, for which women are eager purchasers.

49. Then a report was spread that Government would tax heavily all the sellers after the fair, and consequently many decamped as soon as ever they had sold their stock.

50. Again, it was reported that Government would pay for all goods not sold at the fair, and consequently a merchant, who I knew had sold goods to the value of Rs. 2,700, gravely assured me he had only sold Rs. 300 worth.

51. With all these disturbing elements it was most difficult to obtain reliable statistics. But on one or two points the testimony was unanimous.

They all acknowledged that the goods had been sold to a large extent, and at highly remunerative rates. Common consent admitted that, out of the whole merchandise collected, at least two-thirds had been sold. If then, as was estimated on the returns given by individual traders, three lakhs of goods came to the fair, two lakhs' worth must have been disposed of.

52. Then as to the prices—woollen blankets which in Koolloo sell for 3 or 4 rupees were eagerly bought at 7-8 and 8 rupees.

On the other hand, traders from the plains not only sold off their whole ventures at good profit, but in some instances they sent off to purchase goods in the neighbourhood, and bringing them in realized profits on the sale.

53. It was a matter of regret that the Yarkund traders, whose advent Dr. Cayley's letter led us to watch with such interest, were detained on the road by an early fall of snow; a few arrived before the fair was finally closed, but the bulk of the merchandise cannot be disposed of at Palampore this year. It will, however, find its way to Amritsar and other

markets, and no harm to future fairs is done by this non-arrival in time. Those merchants who did arrive repeated to me the remarks already reported by Dr. Cayley in his letter. I examined much of their merchandise, and made enquiries regarding the articles most in demand in Yarkund, and have little doubt but that, if all obstacles be removed, we shall find the Yarkund merchant a steady frequenter of our Annual Fairs.

54. The following statement of purchases and sales is taken from the returns registered by a writer employed for this purpose. But much more was sold of each kind than was entered in the register, and subsequently a large stock of wool was disposed of.

The merchants who deal in shawl wool were incredulous as to the fact of any fine wool making its way to the fair, and therefore did not come to Palampore. This, then, which was in reality the most valuable of all the commodities for sale, remained on hand, and has now been taken to Loodiana and Amritsar.

The total number of persons at the fair may be put at 30,000. No faqirs or beggars, such as frequent religious fairs, were to be seen.

Gram,	1	For 16 seers.

55. As an appendix to this report, I beg to submit a translation of a very intelligent and suggestive report made by Extra Assistant Ameen Chund, whose energetic action, as well as tact and conciliatory manner towards the native gentry who visited the fair, proved of the greatest assistance to us.

56. The successful arrangements of the fair are due to the very able staff of Civil Officers in the Kangra district, both European and Native, and I trust His Honor the Lieutenant Governor will accord his acknowledgments to—

Major Pasko, Deputy Commissioner.
 Mr. Lyall, Settlement Officer.
 Mr. Coldstream.
 Mr. Young.
 Mr. Rivaz.
 Moonshee Ameen Chund.
 Pohloo Mull, Settlement Superintendent.

57. The conservancy arrangements were very completely supervised by Doctors McDonald and Warburton. Captain Baillie, in charge of the Kangra Police, maintained an active and efficient control over the fair.

58. Having now described what has been done hitherto, I do not venture to write about the future, or draw any picture of success. I have had but one object in view for the last two years, and that was to remove all obstacles in the way of trade. No effort has been made to force commerce into a new channel, or to create a trade which did not exist. The history of almost all progress and improvement is the story of the

removal of shackles and prejudices which have been allowed to spring up and choke the freedom of thought or action ; and if a trade which existed centuries ago, but which has been well nigh extinguished by the short-sighted policy of foreign rulers, has now been allowed to flow on in its accustomed channel, free from all impediments, I think we may feel that we have achieved all that could be expected.

59. My remarks hitherto have been confined to the opening of the trade with the countries north of Hindoostan, but I trust I shall not be considered presumptuous if I offer a few remarks on the subject generally. Last year I ventured to suggest that fairs should be more generally established, as there appeared to be every reason for believing that we might command the whole Central Asian trade. At that time an objection was offered, that the trade was not worth much, and that Dost Mahomed, when urged years ago to take steps for improving our commercial relations, replied that there was nothing to be got from, and little wanted in, his country. But since then events have greatly changed, and opinions should change also. We have sundry important facts to guide us.

60. We know that the Russians have shut out the Bokhariots from the Nijni Novogrod and Orenburg markets, and the Envoy from Bokhara expressed his anxiety to secure for his country a good market with Hindoostan.

61. We hear from Russian accounts that trade in Central Asia is paralysed, and their officers have so mismanaged affairs in their newly acquired provinces, that great difficulty and delay is apprehended in restoring commerce to its former condition.

62. We hear further that on the Chinese frontier the Mahomedans are making strenuous efforts to shake off the foreign yoke, and the Russian and China trade is much interfered with. The Mahomedan nations being cut off from China on the one side, and being disgusted with Russia on the other side, look to Hindoostan as the only outlet. Thus then the Central Asia necessity is our opportunity, of which we might take advantage. It is not necessary to send into their countries to entreat them to come to our markets. The experience of the fair just held shows that the simple announcement of its establishment suffices to attract traders from afar. If then similar fairs be established at Peshawar or Kurrachee, it would seem more than probable that they would be largely attended, and we may indulge in the belief that, by thus establishing commercial relations with the frontier tribes, we shall spread a feeling of amity and security far more widely and rapidly than we can hope to attain by any number of British bayonets.

*From J. A. E. Miller, Esquire, Secretary to Financial Commissioner, Punjab,
to C. U. Aitchison, Esquire, Officiating Secretary to Government, Punjab.—
No, 633, dated Lahore, 6th December, 1867.*

In submitting, for the perusal of His Honor the Lieutenant-Governor,

Palampore Fair. the accompanying letter, No. 246, dated 12th ultimo, from the Commissioner of Jullundhur, reporting on the fair held at Palampore, in the Kangra district, the Financial Commissioner desires me to state that he considers that Mr. Forsyth in particular is entitled to the chief credit for its establishment, and for the success which has attended its first meeting.

2. Mr. Roberts thinks that Mr. Forsyth is justified in expecting still greater results in future years. No doubt in time this fair will be the means of reviving the long dormant trade between the Punjab and the more eastern part of Central Asia. Such a result cannot fail to be of benefit to ourselves and our subjects, and of still greater benefit to the people of such secluded countries as Yarkund, Tibet, and Tartary.

3. Mr. Roberts thinks that Mr. Forsyth should be encouraged in his praiseworthy efforts to restore this ancient but probably never fully developed trade.

4. It is obvious that such extensive and successful arrangements for the fair as Mr. Forsyth describes could not have been carried out in a recently established place like Palampore without the hearty co-operation of the Deputy Commissioner of the district, Major Paske, who, with all the other officers mentioned by the Commissioner, especially Moonshee Ameen Chund, Extra Assistant Commissioner, is also entitled to the acknowledgments of Government. Mr. Roberts recommends too that the approbation of Government be communicated to the Rajahs of Munde, Sookeit, and Bilaspore, and to Wuzer Goshoon.

5. As regards Mr. Forsyth's suggestion for the establishment of a fair at Peshawar—the subject which has been mooted from time to time during the last eight years—has within the last two months been seriously entertained, and will, Mr. Roberts hopes, ere long be carried out.

6. Mr. Roberts recommends that the Commissioner's Report on the Palampore fair be published as a Supplement to the Punjab Gazette.

From C. U. Aitchison, Esquire, Offg. Secretary to Government, Punjab, to Sir W. Muir, K. C. S. I., Secretary to Government of India, Foreign Department.—No. 8, dated Lahore, 4th January, 1868.

In forwarding, for the information of His Excellency the Viceroy and Governor-General in Council, the accompanying letter and enclosures from the Secretary to the Financial Commissioner, No. 633, dated 6th ultimo, regarding the establishment of a fair at Palampore, in the Kangra district, I am directed by the Hon'ble the Lieutenant-Governor to make the following remarks and observations :—

2. The Lieutenant-Governor considers that Mr. Forsyth is entitled to the greatest credit for having so opportunely originated the idea of a fair at Palampore, and so successfully carried it into effect. The place appears to have been well chosen, the arrangements excellent, while the

result has surpassed anticipations, and affords great encouragement for the future. The Lieutenant-Governor trusts that the Palampore fair of 1867 may prove to be—as it promises to be—an epoch in the history of the development of trade with Eastern Turkistan.

3. In Mr. Davies's elaborate report upon the trade and resources of Central Asia, it was shown that there existed in those countries a considerable demand for European and Indian goods, and that, taking *Yarkand*, *Bokhara*, and *Hirat* as the commercial *fori* of Central Asian trade, India is practically nearer those markets than Russia.

4. It was shown also that there was already in existence the means of mercantile communications with those markets through the agency of long established mercantile clans, such as the *Küaikashes* of Yarkand, the *Paráchas* of Turkistan, and the *Povindahs* of the *Goleri pass*.

5. It was shown in the minute by Sir Robert Montgomery, dated January 1863 (which accompanied Mr. Davies's report), that much had been done and was being done, so far as lay in the power of the British Government, towards encouraging the development of commerce with the north. All customs and transit duties, formerly levied by the Sikh Government, had been abolished; regular steam communication had been established between Kotree, the terminus of the Sinde Railway, and Multan; a Steam Flotilla had been started for navigating the Upper Indus between Sukkur and Makhadd, about 80 miles below Attock, and within 100 of Peshawar; a metalled road was *being* constructed from Peshawar to Amritsar, the commercial capital of the Punjab; a railroad was *being* constructed from Amritsar to Multan; the road in British territory leading from Kulu to Ladakh and Yarkand was *being* made passable for beasts of burden; and a bridge was *being* thrown over the Chundrabhaga at Koksar, the chief impediment to travellers by that route.

6. But it was observed that much of the difficulty of stimulating the trade with Central Asia arose from the fact of the nations north of Affghanistan being, it was believed, almost inaccessible to British influence; while the trade with Yarkand and Ladakh was impeded by the insecurity of the road from Yarkand to Leh, and the exorbitant duties levied by the Maharaja of Cashmere on goods passing through his territories.

7. It will be interesting to review briefly what has been done, and the changes which have taken place since the date of the Minute above quoted.

8. In the first place, considerable improvement has taken place in the navigation of the Upper Indus. An iron steamer, built expressly for the purpose of navigating shallow waters (on the stern-wheel principle), has been procured from England, and has proved to be the most suitable vessel for the Upper Indus yet constructed. She promises, when certain improvements have been made, to perform the journey from Sukkur to

Makhadd and back (including stoppages), a distance of nearly 800 miles, in 23 days. Another has since been ordered from England, in which a few defects observable in the present steamer will be avoided. A River Conservator has been appointed for the Upper-Indus, under whose supervision the channels have been deepened, snags removed, and rocks, which impeded the channel between Makhadd and Attock, destroyed by blasting; the towing path between Makhadd and Attock has been improved, and a road made to connect Makhadd with the Grand Trunk Road. The pilots are daily improving in their knowledge of the river, so that the average duration of each voyage has been reduced. The result is, that native shippers are resorting in increased numbers to the steamers for the transport of their goods; and, for the first time last year, the steamers of the Punjab Flotilla were patronized by Povindah merchants from Ghazni.

9. All the works mentioned in the Minute as *being* under construction are now completed. A magnificent metalled road runs from Peshawar to Lahore and Amritsar, and Cabuli merchants, who but lately were seen toiling with long trains of camels, now ride at ease with their merchandize in carts. A railway runs from Amritsar to Multan, and one from Amritsar to Dehli is approaching completion; a substantial bridge *has been* built over the Chundrabhaga, at Koksar, and the road from Ladakh to Kulu is passable for laden animals, and has been already traversed by a kafila of merchants from Yarkand, and further, a road traversing the entire length of the Palam and Kangra valleys is being constructed, connecting Palampore, on the route from Kulu, with Nurpore at the mouth of the valley, at a gradient suitable for carts, by which means carriage communication will shortly be opened with the plains, both by the route from Kangra to Hoshiarpore, and by that from Nurpore to Pathankot.

10. The expulsion of the Chinese from the countries of Eastern Turkistan has at the same time removed one of the greatest obstacles to trade with Yarkand, Khotan, and Kasghar; while the advance of Russia has caused all the Mahommedan races of the north to look with more favor than heretofore towards England. We have had Ambassadors from Khok and, Bokhara, and Khotan, all professing on the part of their chiefs a strong desire to open out friendly relations with the British Government, and in particular to promote the development of commerce between their countries and British India. We have received similar communications (through the Maharajah of Cashmere) from Yakub Khush Begi, the new and energetic Ruler of Yarkand, Kasghar, and Khotan. So that in fact all that now remains for us to do is to respond to the advances made to us on almost every side.

11. Lastly, the Maharajah of Cashmere has, at length, agreed to reduce the exorbitant duties levied on goods in transit through his territory to a uniform duty of 5 per cent. *ad valorem*, and a British officer will be stationed at Ladakh, each season, to see that his promises on this and other points are duly carried out, that no undue interference is permitted with trade passing between British territory and the countries beyond the Cashmere frontier, and that traders are allowed to proceed by such routes as they may prefer.

12. Under the circumstances which have been described, it has become, in the opinion of the Lieutenant-Governor, imperative on us to take advantage, to the utmost of our power, of the favorable opportunities now opening out to us for developing the trade between the Punjab with its dependencies, and the countries separated from us by the Himalayas with Hindû Kôsh.

13. And first as regards the region which has hitherto been best known under the designation of Chinese Tartary—including Yârkand, Kasghâr, Khôtan, Kuchar, Tûrfân, and other smaller countries; all apparently being now consolidated under the vigorous rule of Yâkûb Khush Begi, a dependant until lately of the Khokand Chief. The Lieutenant-Governor regards it as virtually certain that of all Central Asia this is the portion which is the most inviting to the trader—as being richer, more populous, and more eager for traffic and the arts of peace, than the regions which may be called Tartary proper—including Bokhâra, Khokand, Khiva, and Badakhshân—the land of the Usbaks or Osbeks. From the extracts published from time to time in the public papers, derived mainly from Russian sources, it seems clear that the Russians are of this opinion, and the results of the first Pâlampore fair, got up hurriedly, and but partially announced to the public as it necessarily was, shows in a striking manner how opportune has been the endeavour on our part to invite, at the present juncture, the races inhabiting those regions to friendly intercourse with us, and how cordially the invitation is likely to be responded to in future, as the facilities for communication increase. To what dimensions the trade may ultimately extend, it is not possible now to foresee, but the Lieutenant-Governor fully anticipates that it will prove very large—more especially if the Khush Begi succeed, as appears probable, in establishing a permanent and stable government. The probability seems to be great, that the production of tea in Kângra, Kûllû, and the hills of the North-Western Provinces, will receive an enormous stimulus from the demand now rising in that quarter, while it is stated by the Yârkand traders that the Turfâni Pashm, the appearance of a small parcel of which at the Pâlampore fair (about 11 maunds) created so great a sensation, can be brought down in almost unlimited quantity, if existing obstacles be removed—and that the only reason why larger quantities have not been brought down hitherto is that the Maharaja would not allow it to be taken anywhere save to Cashmere, and levied on it so heavy a duty as to render it barely remunerative.

14. The entire route from Pâlampore to Lêh through Lâhoul, by the Rotang and Bâra Lacha passes, is even now such that a mounted traveller can ride the entire distance, including the passes, on horse-back, so that repairs and partial improvements are alone required. From Lâhoul to Yârkand, the route which is believed to be the most direct, and in some respects the best, is that by Chang Chimmu, which traverses a small corner only of the Maharaja's territory; but as three or four stages of this route lie within the Province of Rudôkh, which is subject to the Tibetan authorities at Lhassa, their jealousy might perhaps render the adoption of this route a matter of some difficulty, unless indeed the influence of the Khûsh Begi should hereafter become sufficiently great, and his anxiety

for liberty of trade sufficiently strong, to ensure the removal of all opposition from any quarter. There is however another route passing similarly through a corner only of the Ladâkh territory, which is also tolerably direct, and is said to be the easiest of all, *viz.*, that by the Kâra Kôsh river, which route, it is believed, would have been preferred by traders to all others, and would now have been in general use, but that the Maharaja of Cashmere has prohibited its adoption, lest the realization of his duties should be thereby rendered more difficult and uncertain, to which some add, as a further cause, that it has been hitherto much infested by plundering tribes. The former obstacle, so far as it may exist, must be removed for the future by the action of this Government, while the latter, it may be presumed, will speedily disappear before the vigor of the Khûsh Begi's rule.

15. The Lieutenant-Governor regards the location of a British officer at Lêh in Ladâkh, on the immediate confines of the above region,—the result mainly of Mr. Forsyth's persistent recommendations—as one of the most important measures that have been or could have been adopted by us in this quarter. And although the Cashmere Government has taken exception, not without cause, to some expressions used by Doctor Cayley in documents issued by him, the Lieutenant-Governor considers that officer to have conducted the duties entrusted to him, on the whole, with remarkable tact and firmness, in a very kindly spirit, and with a most honest desire to promote the real interests of all concerned, so that he is, in the Lieutenant-Governor's opinion, entitled to much commendation. His presence there has had a marvellous effect in checking irregularities, inspiring confidence, and making the real state of affairs apparent, both to the British authorities and to the Maharaja of Cashmere, who has heretofore been kept sadly in the dark by his officials. And with the thorough knowledge which he has now obtained of the people of those parts, and the requirements of the Central Asian trade, the Lieutenant-Governor anticipates that his presence there during another season will be productive of yet more conspicuous and beneficial results.

16. Every reasonable effort should, in the Lieutenant-Governor's opinion, be made, at the same time, to establish friendly relations directly with the Ruler of Yârkand. The Lieutenant-Governor has already intimated to the Supreme Government that an envoy, sent by Yakub Kush Begi to the Maharajah of Cashmere, has been invited from Jammû, where he is now in attendance on the latter, to Lahore, with a view to ascertaining, as far as possible, the views and wishes of his master; and in the event of there being a good opening, the Lieutenant-Governor is strongly of opinion that it will be now a wise policy on our part to depute a Native officer of intelligence and discretion, in whom we can repose entire confidence, with suitable introductions, to Yakub Kush Begi's Court to assist our traders and watch over their interests, to collect detailed information in regard to the requirements and possible extension of the trade, and to keep the Yârkand ruler assured of the friendly intentions of our Government.

17. As regards trade with Tartary proper, although, as already observed, the Lieutenant-Governor does not regard the field as so inviting a one, or so readily accessible, as is that afforded by Yârkand and its

dependencies, yet there is hardly any room for doubt that it is capable of very great extension, if it were more cared for by us than it has hitherto been; for, excepting by the removal of all restrictions and improving communications within our own territory, it cannot be said that any direct efforts have hitherto been made by our Government towards encouraging the trade. Amongst the available means for doing so, the one which has been alluded to by both Mr. Forsyth, and Mr. Roberts, the Financial Commissioner, that of establishing a fair at Pesháwar, appears unquestionably to be the most feasible and the most likely to produce an immediate and marked effect, judging from the result of the newly established Pálapore fair. A proposal to this effect has been mooted for some years past, but has always been regarded as difficult and uncertain of realization; and in consequence laid aside. A short time ago the Lieutenant-Governor directed the Commissioner, Major Pollock, to consult with the Financial Commissioner on the then expected visit of the latter to Peshawar, which was carried into effect about a month ago, and if possible to make arrangements, in communication with him, for holding a fair in the Peshawar valley during the approaching spring. But both officers concurred in the opinion that, owing to the civil contest going on in Afghanistan, and the havoc and interruption of trade which have been caused by the epidemics of the past year, added to the shortness of the notice it would be possible now to give, and the changes of local officers which have become necessary, the present year would prove unfavorable for the experiment. The Lieutenant-Governor has not thought it advisable to press the matter in opposition to their judgment, but trusts that the project may be carried out next year.

18. Should the completion of a Railway from Peshawar be determined on, as the Lieutenant-Governor believes that it must be ere long, a vast increase of prestige and importance will necessarily accrue to such a fair; and even if present results should not be great, it will be well at least to have the nucleus established before that time arrives. I am to add, also, that another circumstance which may give importance to this project is the existence of a route from Peshawar to Yarkand, through parts of Swat and Boner, and the territory of Chitral, passing over the Pámir steppes, which is probably the most direct as well as naturally the easiest of all lines of communication between the Punjab and Chinese Tartary. The absence of stable governments in the two former countries especially, and the lawless character of the populations, have been the main cause why this route, which would render the trade quite independent of Cashmere, has not been hitherto much used. But it is not unreasonable to expect, that the increased interest in the trade with Peshawar, which would be created amongst the Yárkand dealers by the establishment of the proposed fair, would lead to a gradual improvement of the existing state of affairs, while the measure would afford us fresh facilities for coming to a better understanding than exist at present in regard to the free transit of traders with the countries through which the route lies.

19. It has been proposed by some that a second fair should be established at Dera Ismael Khan for the benefit of the trade going through the Guleri and other passes of the Sulimani range; but the communi-

cations between that place and the other parts of the Punjab, as well as with the sea-board; are not at present such as to render the project, in the Lieutenant-Governor's opinion, a very promising one. Owing to the very impracticable nature of the Indus river as a channel for trade, the Lieutenant-Governor does not feel very hopeful as to the ultimate success of the Steam Flotilla, which is at present worked at a heavy loss. It is possible that the new description of steamers now being introduced may work a very material change in this respect. But the Lieutenant-Governor doubts whether the river route will ever prove of so great benefit as would a good road, practicable at all seasons, through the Derajat from north to south, which does not at present exist, and which is, in the Lieutenant-Governor's opinion, a very great and urgent desideratum. Under any circumstances, Dera Ismael Khan is not likely for many years to come to offer the same advantages as Peshawar, and the Lieutenant-Governor would certainly not attempt to establish a fair there until that at Peshawar has been for some time in existence, and proved to be a success.

20. The Lieutenant-Governor cordially concurs in the commendations bestowed by Mr. Roberts on Mr. Forsyth and on the subordinates named by him, who have afforded him the most hearty and effective assistance in connection with the Palampore fair; and agreeing with him also, as the Lieutenant-Governor does, in regard to the importance of making known to the public the proceedings which have passed and are in progress in connection with the Central Asian trade, the Lieutenant-Governor proposes, on receiving an expression of the views of the Supreme Government, to have the correspondence published in the *Punjab Gazette*, and hereafter republished in a volume of Selections.

From Sir R. Temple, K. C. S. I., Officiating Secretary to Government of India, Foreign Department, to C. U. Aitchison, Esquire, Officiating Secretary to Government Punjab and its Dependencies.—No. 269, dated Fort William, 12th February, 1868.

Having received and laid before the Governor-General in Council your despatch of the 4th ultimo (received here on the 31st), regarding the fair recently held at Palampore, in the Kangra district, with so much success, I am directed to communicate the following observations:—

2. His Excellency in Council has perused these papers with much interest; and fully concurs in the commendations bestowed on Mr. T. D. Forsyth and the other officers who worked with him in this matter. The services rendered by them to the cause of trade in those regions are important.

3. The Government of India can only trust that the anticipations which appear to have been formed regarding the growth of trade between Northern India and Central Asia may be duly realized. But without doubt there are serious obstacles in the way of such a consummation. In the direction of Eastern Turkistan particularly the routes are mountainous and arduous in the extreme. And the countries intervening between the

different parts are insecure in the last degree. Of course these or any other difficulties should be met and contended with so far as our means may reasonably allow. All fair encouragement should be given to the trade. Artificial obstacles, such as transit duties, should be removed so far as our influence or power may suffice for the end. Fairs, such as that now reported, should be established and fostered. Such friendly communications as can be maintained without committing ourselves to ulterior measures should be encouraged. But His Excellency is averse to attempting at present more than what is sketched above.

4. The roads, if such they can be called, are as bad as can well be imagined. But it is almost impossible to improve them. For the British Government to attempt any improvement in the communications in that quarter would, in the present condition of the finances, be out of the question.

5. The Governor-General in Council entirely approves the project mentioned in paragraph 17 of your letter under acknowledgment for the establishment of Annual Fairs at Peshawar. Fairs in our own territory, and under our own supervision and management, have the effect of developing trade with the countries around, and this without any risk of political embarrassment.

6. And in reference to the trade generally, His Excellency in Council entertains a hope that the tea trade may grow, and may cause an increasing exportation of that article northwards from the Himalayan plantations.

7. But the Governor-General in Council regrets his inability to accede to the proposal in the 16th paragraph of your letter under acknowledgment for the deputation of a Native Agent of any kind to Yarkund. In the first place, the mercantile connexion is not sufficiently matured to justify the step. But, further, from a political point of view, there are many grave objections. The power of the Khoosbegee, as Ruler of that country, does not seem to be at all consolidated. There can be no security for the safety, or even for the good treatment, of our Agent. Whereas, on the other hand, the chances of misadventure are manifold. No doubt a native of India, if carefully selected for his judgment, tact, and temper, though he might not have the merit and ability of an European officer, would yet be much less likely than an European to fall into trouble among such people and in such regions. But a Native Agent would be often in a highly unsafe position during many parts of the journey, coming and going, and also while actually residing in Yarkand and Khotan. Further, from such a deputation there would arise unreasonable expectations in the minds of the rulers of that country. Perhaps even absurd demands might be advanced if the Agent failed to satisfy these requests or to recommend them to the British Government; or if when thus recommended they were ultimately refused, the Agent might suffer ill treatment. And then it were needless to describe the embarrassments to which such occurrences would lead.

8. For all these reasons, the Governor-General in Council is firmly of opinion that the deputation of a Native Agent to Yarkund is unadvis-

able; and would be prepared absolutely to refuse compliance with any request to that effect. The Lieutenant-Governor can of course maintain such communication by writing as His Honor may deem fit. But more than this cannot at present be thought of.

APPENDIX.

Translation of extracts from Report on the Palampore Fair, by Moonshee Ameen Chund, Extra Assistant Commissioner, Settlement, Kangra District.

1. The fair at Palampore commenced on the 28th October, 1867, and continued till the 7th November, but it was crowded from 30th October to 4th November, 1867. The number of persons assembled at the fair is supposed to have amounted to between 40 and 50,000.

2. To prevent the spread of disease, separate places were fixed for the Rajahs and Râeeses (gentry) at a distance from each other. To look after the sanitary arrangements, there were four Native Doctors and two Civil Surgeons, and a separate division was fixed for each Native Doctor, while the two European Civil Surgeons took general charge of the conservancy of the fair. Happily there was no disease.

3. The Police officials also managed well. No offences were committed, except one or two petty crimes. No losses occurred, although on the day of the durbar the fair was crowded.

4. No faquirs, naked or sick persons, were to be seen in this mela, as are usually seen in the other fairs, on every side. "Sofeid poshes" and traders were to be seen with their merchandise nicely arranged on their shops.

5. Here were to be seen, for the first time, traders of Amritsar Sealkot, Gurdaspore, Amballa, Ludianah, Jullundhur, Hoshiarpore, Bus-, sahir, Kullu, Plach, Spiti, Lahoul, Ladakh, Butant, and Yarkund: the sales and purchases made were very satisfactory.

A list of the sales and purchases is annexed.

6. This list has been prepared from the daily statement of the Mohurrir, who was appointed to record all the sales and purchases at the fair; in this are also included the goods sold after the mela and dismissal of the Mohurrir. By enquiry it has been ascertained that the traders for two reasons did not give a correct statement of the sales made by them:—

1st.—It was rumoured by some "Budmash" that a tax would be levied on the sales.

2nd.—Some thought that by giving a statement of the sales of a less amount than was actually sold, they would get some reward as road expenses. On looking at the papers of the Mohurrir, it was found that about half of the property was sold; but on looking at the shops when the fair was over, very little property was seen in them.

No doubt the amount of sales was high, but in the list annexed the sales are entered according to what the traders themselves reported.

7. From the list it will be seen that the sale of Piece-goods and Brass-vessels was very high. "Pushmeena" and "Kinkhab," &c., were also sold, owing to the presence of so many Rajahs and Râeeses at the fair.

The sale of "Basâtee" articles, such as beads, &c., was very low, as a rumour had been erroneously spread by some persons that women would not be admitted to the fair; but it is hoped that next year the sale of such articles will be satisfactory. The sale of the goods received from Yarkund, Ladakh, Spiti, Kullu, and Lahoul was generally high. The worst of the ponies were also sold. The sale of "Oon" and "Pushm" was limited at first, because the purchasers thought that after the fair they would get them at cheap rates. But before the fair was over the whole of the "Oon" (wool) was sold, but the sale of Pushm was still limited, because there were not many purchasers; they did not come because they did not know that wool of such a fine quality would be obtainable at the fair.

After the fair was over, the traders took the Pushm remaining unsold to Ludianah and Amritsur.

8. It is believed from the conversation of the traders that next year many purchasers of Pushm will come; this year they had no knowledge of the Yarkund road having been opened, nor had they hope of such a fine article coming by that route.

9. It is also satisfactory to mention that the traders after selling their own goods purchased Tea from this place for the purpose of traffic. This year the quantity of Tea so sold has not been much, but next year it is believed that the sale will extend largely and a mart (munder) be established here, and persons who used to send their Tea to Amritsar and other places will now profitably sell it here.

10. A list of the rewards distributed by a Committee is annexed.

11. It is to be regretted that the Yarkundee traders could not more largely join in the fair, owing to the fall of rain and snow on the road they had to come by.

12. The traders were pleased to find that Government did not interfere in their rates. A statement showing the rates at which certain things were sold is enclosed.

13. The Rajah of Mundee has expressed his intention of establishing a mundee of "Goma" salt here.

14. Moulvie Oomurdeen, a Raees and a trader of Noorpore, and also a member of the Anjimin, wrote an article on the benefits of commerce, and on the 4th November, 1867, read it out in the Anjimin durbar. It contained a proposal for the formation of a Company, to be called "The Central Asia Trading Company." The gate into the trade of Yarkund,

he said, had been opened, and the obstacles of heavy duties and difficult road had been removed.

The speech was well received by the Kangra Society, who took the matter up, and on 6th November, 1867, a Special Committee assembled to consider the matter, and the following resolutions were come to:—

1st.—That the capital of the Company be 3 lakhs : one-third to be paid up at once; second call of one-third to be made after 6 months or a year, as might be necessary. The remaining one-third not to be called in except on emergency.

2nd.—That the capital be divided into 1,000 shares of Rs. 300 each; no shareholder to have less than one share.

3rd.—That the Company be called “The Central Asia Trading Company,” and that its head-quarters be at Palampore, with agencies at Amritsar, Kullu, Lahoul, Ladakh, Yarkund, &c.

4th.—That for the present all correspondence and proceedings of the Company be conducted by the Kangra Anjimin.

5th.—That a notice in English and Vernacular be issued by the Anjimin on this subject, and that the business of the Company do not commence until all the shares are taken up.

SUBSCRIPTION LIST towards Prizes and Rewards.

No.	N A M E.	AMOUNT.	REMARKS.

I. B.—2. Native Chiefs and principal male members of their families, 1867.

Name of individual and State and family to which he belongs.	Present position.	Caste or Race and Religion.	Age.	How educated.	How employed.	Has Sannad authorising and option or not.	Family follows Primogeniture or not.	Has male heirs or not.	R E M A R K S.
1.—Ranbir Singh, G. S. I., Ruler of Jammu and Kashmir,	Maharaja	Rajput.	45 years.	Can read and write Sanscrit, Persian, and Dogra.	Administers his State.	Has <i>Vide</i> Supreme Government letter No. 218 of 5th March 1862.	Family follows Primogeniture.	Four sons.	The eldest son Mian Partab Singh is the heir-apparent. Moti Singh, first cousin of the Maharaja.
2.—Muhinder Singh, Patiala, Cis Sutlej States, ...	Ditto.	Siddhu Jatt.	15 years, 4 ms.	English, Persian and Gurmulah, an eminent Mathematician of Delhi.	Is being educated by Ram Chandra an eminent Mathematician of Delhi.	Ditto.	Do.	* A son.	* Born on 17th October 1867.*
3.—Sadiq Muhammad Khan, of Bahawalpore, ...	Nawab.	Daudpotra.	8 years, a minor.	English and Persian.	Is being educated by Pundit Jai-narain an English Scholar of Delhi.	..	No.	None.	At the request of the late Nawab Bahawal Khan, the Supreme Government sanctioned on 19th March 1859, his appointing his third son Saadat Yar Khan who afterwards assumed the title of Sadiq Muhammad Khan as his heir-apparent, in preference to his elder son Haji Muhammad Khan, (alias Fateh Muhammad Khan.) In October 1852, the Nawab died, and was succeeded by the Heir elect. But in February 1853, Haji Muhammad Khan contrived to escape from confinement, and dethroned Saadat Yar Khan, (who was sent to Lahore,) and took possession of the throne.

I. B.-2.—(Continued.)

Name of individual and State and family to which he belongs.	Present position	Caste or Race	Age.	How educated.	How employed.	Has Sannad authenticating his position or not.	Family follows primogeniture or not.	Has male heirs or not.	REMARKS.

Of the Rajputs and the warlike classes of these hills there are few in jail. The Brahmins and Khatriis here are not usually a fine race. There are very few Mahomedans in jail, and those mostly inhabitants of Hindustan proper. The Ghertis are a peculiar class calling for remark. They are the rice cultivating zemindars of the Kangra valley, and are remarkable for their Mongolian and stunted features, spare habits and the prevalence of the goitre among them.

	Bararayas,

Caucasian, round face, wheat colour; hair black and straight; good and mild temper.

These races are universally black haired, the hair is straight. Their features are Caucasian. Intelligence, & temper vary so much with individuals of the same class, that it is impossible to make any general statement to them.

Most of the Afghans have strongly Jewish features, hair straight. Some intelligent, excitable; and revengeful. All come under head "Caucasian."

II. E.—3. Statement showing Religion, Races, and Classes of the Native Officers and Men of the Punjab Frontier Force on the 30th April, 1868.

Classification according to Religion, Race, &c.		Average height.		General physiognomy and characteristics of each race and caste.
		Regimental average.	General average.	
According to Religion.	Mahomedans ...	5-9 to 5-5½	5-7½	<p>Hindustanis. The distinctive physiological characteristics of the Hindustanis are:—dark hair, dark eyes, dark complexion, slight and elegant frame; regular features, expressive of indolence and good temper, and at the same time of a capacity for cunning and intrigue. They are found to be tractable in disposition: sober and thrifty in habits; hence they are easily disciplined; and as they generally become, when enlisted in the cavalry, “finished” riders, they are considered well fitted for that branch of the service. They are very inferior, however, to Panjabis, as artillery men; their make and habits being ill-suited for hard labour.</p>
	Hindus ...	5-9½ „ 5-5	5-7½	
	Sikhs ...	5-10 „ 5-6	5-7½	
	Christians ...			
	Parsces ...			
According to Countries and Races.	&c. ...			<p>Panjabis. This race combines a variety of tribes and classes; and must be divided, for the purpose of description, into two Religions, the Mahomedan and the Sikh. <i>The Panjab Mahomedans.</i>—Themselves of several distinct families, are generally speaking, tall and powerful men, with rather fair complexion, and a free carriage and bearing. They are indolent and luxurious; and though perhaps smarter men in appearance than the thrifty and abstemious Sikhs, are vastly inferior to them in activity and powers of endurance. <i>The Sikh</i>—A native of the Western Himalayahs, has features of the Jewish type; his complexion is fair; eyes sometimes of a light color, height good, and frame active and wiry. He makes an excellent artilleryman, sober and thrifty; no-reckless in food, and steady in habits; living on less than half his pay he proves superior to the Mahomedan in all active exercises, and excels him in true soldierly feeling. His character is proud and quiet; patient and reserved. Cavalry Officers describe him as a fair horse-man and staunch soldier; and in the Infantry he is considered a good shot, and a brave, dashing fellow. The race appears to be deteriorating, and recruits of the right stamp are now very difficult to obtain.</p>
	Hindustanis ...	5-10 to 5-5	5-8½	
	Panjabis ...	5-9 „ 5-5	5-7½	
	Affghans ...	5-9½ „ 5-7½	5-7½	
	Beloochis ...	5-9 „ 5-5½	5-7½	
	From Western Himalayas ...	5-8½ „ 5-6	5-7½	
	„ Eastern Himalayas ...	5-7½ „ 5-2	5-4	
	Bengalis ...			
	From Mahratta countries ...			
	Polingias ...			
Hindus, according to Caste.	Canarose ...			<p>Affghans and Pathans. <i>The Affghan.</i>—With somewhat Jewish features, fair and sallow complexion, robust and vigorous form; nearly approaches European races in his habits and general appearance. He is impetuous and extravagant in character. <i>The Pathan.</i>—Strongly built, and broad featured; looks, and is, frank, improvident, light hearted, and courageous. Naturally fond of predatory warfare, he is bold in the saddle, and makes a dashing cavalry soldier.</p>
	Tamuls ...			
	Malabars ...			
	&c. &c., ...			
	Brahmins ...	5-9½ to 5-3	5-8	
	Rajputs ...	5-9½ „ 5-2	5-8½	
Hindus, according to Caste.	Khuttris ...	5-10½ „ 5-5½	5-7½	<p>Gurkhas. Short stature: general physiognomy decidedly Tartar. Cheerful under privation, and brave even to rashness; they surpass all other natives in their valiance and attachment towards their European Officers.</p>
	Aheers ...	5-7½ „ 5-6	5-6½	
	Juts ...	5-10½ „ 5-6½	5-8½	
	Gajurs ...	5-7½ „	5-7½

III. F.—Statement of Mines and Quarries in the Panjab for 1867-68.

WHERE SITUATED.	Mineral produced.	Number of Mines.	Annual Produce.	REMARKS.
Talu, Mamthi and adjacent villages of Parganah Rawari in the Gurgaon District,	Slate,	No Statistics, as the Government has no royalty.
Behranpur, Parganah Gurhshankar in the Hoshiarpore District,	Lime.	1	Rs. 1,100	
Noogovrie Rahnot, Parganah Unahr in the Hoshiarpore District,	Lime.	1	Do. 150	
Mulhadpur, Parganah Unah, in the Hoshiarpore District,	Lime.	1	Do. 10	These belong to the proprietors of these villages.
Dowlaival Parganah, in the Hoshiarpore District,	Lime.	1	Do. 10	
Bhangal, Tahsil Kangra,	Iron.	1	Do. 1,200	
Khunayara, Tahsil Kangra,	Slate.	1	Do. 1,600	This is farmed to the Slate Company, and Government derives no income from it.
Khewra, in the Jhelum District,	Rock Salt.	2	* 9,46,863 Mds. Rs. 28,40,588	* The actual deliveries of Salt from the Mines.
Sardi, in the Jhelum District,	Rock Salt	1	Rs. 1,90,986	
Warcha, in the Shahpore District,	Rock Salt.	1	Rs. 2,82,737	
Kalabagh, in the Bunnoo District,	Rock Salt.	1	Rs. 71,466 Mds. Rs. 2,14,399	The Salt at Kalabagh is quarried from the outer surface of the Mines.

The amount produced cannot be ascertained as yet. It has been used in the Steamers of the Punjab Government Flotilla, between Kalabagh and Mulkud where a fuel with a maximum of heating power and a minimum of weight is desirable; but at present, the supply is limited, and as the fuel abounds in iron pyrites it is liable to spontaneous ignition if stored in large quantities.

Kalabagh, in the Bunnoo District,	Coal or Lignite. Do.	1
Jaba,	Do.	1
Rach Tandi Khail,	Do.	1
Chapri,	Do.	1
Chasman,	Do.	1
Sultan Khail in the Bunnoo District,	Do.	1
